TABLES

State Rankings 12

State and Local Support of Higher Education Per Capita

1a — Total State and Local Support—All Institutions 12
1b — Total State and Local Support—All Public Institutions 12
1c — Total State and Local Support—All Independent Institutions 12
2a — State and Local Student Aid—All Institutions 13
2b — State and Local Student Aid—All Public Institutions 13
2c — State and Local Student Aid—All Independent Institutions 13
3a — State and Local Institutional Appropriations—All Institutions 14
3b — State and Local Institutional Appropriations—All Public Institutions 14
3c — State and Local Institutional Appropriations—All Independent Institutions 14

State Finances and Allocation to Higher Education

4 — Tax Capacity 15
5 — Tax Effort 15
6 — Tax Revenues 15
7 — Allocation to Higher Education 16
8 — Percent Allocated to Public Higher Education 16
9 — Percent Allocated to Independent Higher Education 16

State and Local Government Expenditures

10a — Total Expenditures 17
10b — Percent Allocated to Higher Education 17
10c — Percent Allocated to Elementary and Secondary Education 17

Population and Enrollment

11 — Population 18
12a — Total FTE Enrollment 18
12b — Percent Public 18
12c — Percent Independent 18

Enrollment of State Residents

13a — Total Enrollment Per 1000 Population 19
13b — Public In-State Enrollment Per 1000 Population 19
13c — Independent In-State Enrollment Per 1000 Population 19
13d — Out-of-State Enrollment Per 1000 Population 19

Public Institutions Enrollment

14 — State Public High School Graduates Per 1000 Population 20
15 — Entrance Rate to Public Institutions 20
16 — First-Time Resident Enrollment Per 1000 Population 20
17 — In-Migration to Public Institutions Per 1000 Population 20
18 — First-Time Enrollment Per 1000 Population 21
19 — Retention Factor (First-Time to Total Enrollment) 21
20 — Conversion Factor (Headcount to FTE) 21
21 — FTE Enrollment in Public Institutions Per 1000 Population 21

Independent Institutions Enrollment

22 — State Residents Enrolled at Independent Institutions Per 1000 Population 22
23 — Non-Residents Enrolled at Independent Institutions Per 1000 Population 22
24 — FTE Enrollment in Independent Institutions Per 1000 Population 22

Graduate Enrollment, Percent of Total Enrollment

25a — All Public 23
25b — Public Research Universities, Medical 23
25c — Public Research Universities, Non-Medical 23
25d — Public Universities, Medical 24
25e — Public Universities, Non-Medical 24
25f — All Independent 24

State and Local Appropriations Per FTE Student, Public Institutions

26a — All Public 25
26b — Research Universities, Medical 25
26c — Research Universities, Non-medical 25
26d — Universities, Medical 26
26e — Universities, Non-Medical 26
26f — Comprehensive 26
26g — General Baccalaureate 26
26h — Two-Year Academic and Comprehensive 27
26i — Two-Year Occupational 27
26j — Health Professional 27
26k — Other Professional and Specialized 27

Tuition and Fees Revenues Per FTE Student, Public Institutions

27a — All Public 28
27b — Research Universities, Medical 28
27c — Research Universities, Non-medical 28
27d — Universities, Medical 29
27e — Universities, Non-Medical 29
27f — Comprehensive 29
27g — General Baccalaureate 29
27h — Two-Year Academic and Comprehensive 30
27i — Two-Year Occupational 30
27j — Health Professional 30
27k — Other Professional and Specialized 30

Total E&G Revenues (Excluding Government Grants and Contracts) Per FTE Student, Public Institutions

28a — All Public 31
28b — Research Universities, Medical 31
28c — Research Universities, Non-medical 31
28d — Universities, Medical 32
28e — Universities, Non-Medical 32
28f — Comprehensive 32
28g — General Baccalaureate 32
28h — Two-Year Academic and Comprehensive 33
28i — Two-Year Occupational 33
28j — Health Professional 33
28k — Other Professional and Specialized 33

Government Grants and Contracts Per Faculty Member, Public Institutions

29a — All Public 34
29b — Research Universities, Medical 34
29c — Research Universities, Non-Medical 34

FOREWORD

David W. Breneman
Senior Fellow
The Brookings Institution
Washington, D.C.

This report on the financing of higher education in the 50 states builds on earlier publications sponsored by the National Institute of Education (NIE) and the National Center for Higher Education Management Systems (NCHEMS) and authored by Marilyn McCoy and Kent Halstead. Users of the earlier 1976 version will find several improvements in this edition. Coverage now includes significantly more information on the tax capabilities and fiscal policies of the states, on patterns of enrollment, on institutional finances for both the public and independent sectors, and on faculty salaries. Indeed, the present study is the first to assemble a comprehensive set of statistics to permit meaningful comparisons among states in institutional revenues and expenditures for 10 different institutional categories. The result is a comprehensive summary of each state's financing of higher education and supporting information that is essential to understanding differences among the states in the need for higher education support and the capacity to provide such funding.

Anyone who has worked on state financing of higher education is well aware of the difficulties of conducting interstate comparisons. Despite warning and restrictions on interpretation, administrators, legislators, and other state officials intend to continue making comparisons and use state rankings as a guide to formulating budget requests and funding. In the absence of well defined outcome measures for higher education, it is understandable that policymakers turn to comparisons of inputs as a way to gauge state educational support. Recognizing this need, the authors have made a strong effort to establish comparability—by tracking down and citing inconsistencies in data reporting, by organizing finances by distinctive institutional categories, and by reporting revenues and expenditures on common user unit bases. We are indebted to them for the advancement in this means of financial analysis.

Use of this study will grow as officials grapple with the complex financing issues of the 1980s. We are fortunate to begin our response to these additional information requirements with this landmark study.

PREFACE

PREFACE

This report has been jointly sponsored by the National Center for Higher Education Management Systems (NCHEMS) and the National Institute of Education (NIE). We acknowledge with thanks this financial support and professional encouragement. The data have been provided primarily by the National Center for Education Statistics. The improved quality and timeliness of the NCES data tapes has provided an essential building block for the study. Credit and thanks for programming of the report is due largely to Mic Patrick who with considerable skill, diligence, and good humor accomplished the programming of the expanded analysis from its prior format of one page to its current seven pages. Final formatting and improvements in the data files were accomplished by Catherine Kriz, and we gratefully thank her for her assistance. Jeanne Hurley and David Makowski also generously gave of their time and skills during different phases of this project.

The expanded format also posed many challenges in layout, typesetting, and printing areas. Clara Roberts deserves a special note of thanks for her professional and imaginative direction of work in this area as well as for her patience and good will throughout. We also want to thank Lynn Phillips and Fran Huth for their help in putting together the camera-ready copy. The authors are grateful for the excellent editing provided by NIE editor Anita Bretzfield.

Paula Dressler deserves a very special thank you for her unrelenting efforts in typing and compiling this report. She dedicated many hours of careful work to insure accuracy in both the data and text. Her help in coordinating all phases of this work was key in its final accomplishment.

Special thanks are also warranted to Paul Brinkman, Melodie Christal, Dennis Jones, William Tetlow, and James Topping for their help in supporting this study and insuring its completion through administrative assistance.

This report on financing in the fifty states has evolved from earlier work by both authors. Kent Halstead in *Statewide Planning in Higher Education* (1974) identified selected indexes related to higher education financing and the socio-economic status of states that are used in this study. His work *Tax Wealth in the Fifty States* (1978) provides the tax capacity, tax effort, and tax revenues measures used. Also, adjustments for inflation are based on his annual Higher Education Price Index (HEPI). Marilyn McCoy in her work with the Statewide Analysis Task Force at NCHEMS (including Halstead) and a subsequent panel of experts developed the basic data system and framework used in this report. The members of those groups provided invaluable suggestions and comments in the evolution of the predecessor of this study published as *State and Local Financial Support of Higher Education 1973-74* and an earlier version for 1972-73.

While this previous work established elements and background for the current report, much new work has been done to establish a more easily understood framework for analysis. Most important has been the expansion of information on enrollment, state financing, and education system factors. Now, all the information about a particular state is presented in a eight-page spread of charts, graphs, and text commentary. This approach provides in a single location the key factors affecting state financing in comparative terms to facilitate an integrated analysis of this complex subject.

It is intended that this study be updated regularly. The 1981 fiscal year report will be published in 1983. Recommendations for improvement in format or analysis are encouraged.

SPECIAL NOTE

In the development of this report, NCHEMS has constructed an extensive data base using tapes and other published material from the National Center for Education Statistics, the Census Bureau, and the National Association of State Scholarship Programs, among others. In this report, summary data for six categories of public and independent institutions are displayed for each of the fifty states and the District of Columbia. Similar reports *by institution* can be developed from this data base. In addition, other types of specially tailored reports can be generated from this data base, encompassing basic enrollment, financial, faculty, degrees, student migration, and demographic data. If your institution or state is interested in these data services, contact Barbara Epp, NCHEMS, P.O. Drawer P, Boulder, Colorado 80302 or 303-497-0319; additional analyses can be provided on a cost-reimbursement basis.

IMPORTANT CAUTIONS TO THE READER

The following precautions and explanations are emphasized to give readers a perspective for their reading and to avoid any misuse of the data presented in this edition, particularly in current decisionmaking.

- The data presented here are for fiscal year 1979, with trend data back to FY 1975. Clearly, this information is dated and mainly useful as background material. The data should not be employed in current decisionmaking regarding appropriation levels, formula funding, or the establishment of financial profiles.
- In developing this study, and through review of earlier work, a number of data comparability problems were identified. These mandate that extreme care be taken in making inter-state comparisons of certain measurements. These comparability problems are discussed in general in Appendix B and should be studied prior to reading any individual state's profile. Specific data notes for each state are included with each state's profile.

  A number of variations in the way states report data in postsecondary education underlie our concern regarding comparability. For example, in some states, the vocational education system is included within higher education; in others, it is a component of elementary/secondary education. Similarly, medical schools are organized and reported as separate campuses in some states; in others, they are integrated within a university. To address these differences, research universities and other universities are separately categorized by medical and non-medical. Different state practices for debt financing, retirement system payments, and for counting enrollment also contribute to comparability problems. A special survey of the states was conducted to document important variations in state practices, with results documented in this report.
- There is no ''ideal'' funding pattern recommended or implied in this study, nor are there ''good'' or ''bad'' connotations attached to state rankings. States differ so greatly that many funding strategies can be considered sound.

  Financing higher education is a difficult and complex process. This is reflected in the new approach to data presentation found in this study. The study is more comprehensive than previous work of this type in introducing such factors as student migrations and different enrollment patterns, state and local government tax capacity and effort, the structure of the public higher education system, and institutional revenue and expenditure details. Yet there are voids that can be filled only with locally supplied data. Thus, information should be introduced into the analysis by knowledgeable state and local officials regarding geographical price differences, costly versus less costly academic programs, competition for state monies and traditional funding priorities, history of taxation, specialized accounting practices, and the role of the private sector.

  The breadth of information required for sound funding decisions suggests that many different points of view in higher education be taken into consideration. It is therefore recommended that the analysis and interpretation of this study proceed from the varied perspectives of postsecondary institutions, state commissions, the legislative and executive branches, the general public, and student clientele.
- Proper interpretation and assessment of financing higher education requires study of each state's entire data presentation. Isolation of a single measure or attention to a limited segment is likely to be misleading. One example is the current popular focus on state appropriations per capita, a measure that ignores the different needs for funding represented by enrollment levels, the varying taxing ability of states, different strategies for utilizing tuition versus appropriations, and numerous other factors that determine and usually justify variations in per capita support. Readers are urged to become thoroughly familiar with their state's entire financial picture before attempting evaluation of any specific operating level.

Recognizing the importance of budget decisions and resource allocations that may be influenced by subsequent editions of this study, and the critical need for valid comparative procedures, the authors request your constructive commentary on the study design and statistical detail. Please send your comments to the authors in care of NCHEMS, P.O. Drawer P, Boulder, Colorado 80302.

CHAPTER 1: INTRODUCTION

State and local governments are by far the single largest financial supporters of higher education in the United States. Of the nearly $41 billion received by all colleges and universities for educational and general (E&G) purposes in 1979, 45 percent was provided by state and local governments. Tuition, next in importance, accounted for 27 percent of E&G revenues, and federal appropriations and contracts accounted for 17 percent. Within the public sector, state and local governments play an even more impressive role, accounting for 60 percent of the E&G revenues of public institutions.

Because of the predominant role of states in financing public higher education, efforts to evaluate the contributions made by states and to identify potential changes in these roles are critical. This report, with its focus on comparisons among the states, is intended to aid this assessment process. The substantive motivation for this study is tied to two primary factors:

- State and local governments are the major source of funding for public higher education in the majority of states. Even in those states where the state role is substantially below average, the state still is a key source of funds for public higher education. An understanding of the specific financial circumstances of a state is therefore a key introduction to a review of its support of higher education.
- There are substantial and important differences among the states in their basic conditions as well as their policy resonses to these circumstances. An understanding of these differences is an essential precursor to attempts to make judgments about the adequacy of state efforts and the development of alternative state positions. Among other differences the states have different economic bases to draw on to support public programs; are populated with individuals of varying proclivities for higher education; vary in the extent to which private higher education has developed in the state; differ in the size and character of public institutions to support.

No single number, therefore, can adequately represent this diversity and thus fairly portray state financing. Instead, interested persons must examine a variety of information to build a profile of a state in order to understand the interrelations among these conditions. For example, low per capita support for higher education may be a result of an inadequate tax base, a low level of enrollment in the public sector, a reliance on tuition revenues, a system of public higher education that emphasizes inexpensive forms of higher education, competing social programs of higher state priority, or a combination of factors. To understand state support, therefore, a variety of conditions must be examined.

NEED AND RESPONSE

Two recent developments added ease and incentive to produce this study. First, collection of financial data by the National Center for Education Statistics (NCES) has vastly improved since NCES first produced the *Higher Education General Information Survey* (HEGIS). The HEGIS data base is consistent, detailed, comprehensive, and essentially responsive to national statistical requirements. NCES is continuing to work on definitions and institutional classifications, long-standing problems in achieving data comparability.

Second, knowing of this improvement in data collection, the higher education community is increasingly anxious to have the statistics effectively communicated in more analytical and timely reports. Legislators and college officials are well aware of the potential for published data that clearly document financial needs and provide sound justification and defense of funding requests. Their concern for such data is multiplied now that austerity in government spending and increased competition for funding among public services demand rigorous budget presentations.

This study has also been prompted by the need for an analysis of financing that goes beyond a few simple aggregate measures. Such measures, although commonly used, are entirely inadequate and often misleading. As one example of how state rankings for a single measure can be misinterpreted, consider appropriations per capita. Of the states that rank lowest in the United States for this measure, only one has a substantially under-financed education system. The others have achieved near average total operating funding per student either by supplementing state support with high tuitions or with income from other sources, or, as is the case for one state, by having fewer students to educate in their public sector consistent with and counterbalancing the lower appropriations.

This study is an attempt to gather and organize a *comprehensive* set of state-level financial and supporting statistics on higher education, with emphasis on interstate comparisons as a means of analysis. However, regardless of how detailed and thorough any study of financing is, all conditions affecting higher education cannot be accounted for, and many, in fact, cannot be measured. Therefore, the data must be interpreted with the understanding that unique circumstances within the states can lead to a wide range of acceptable practices.

The eventual level of appropriations is not so much a consequence of legislative action as it is of evolving conditions that depend on many factors: educational opportunity objectives, student financial aid programs, the role of private institutions, government wealth, preparation of high school graduates to attend college, and geographical access. No financial study can possibly replicate this complexity or substitute for local knowledge, interpretation, and judgment.

Such differences notwithstanding, the inherent role of each state in providing and supporting public higher education makes comparisons inevitable. This study assumes that such comparisons, when made with some understanding of causal factors and including the use of interrelated enrollment, fiscal, and financial data that collectively establish a basic state profile, are of value in establishing perspective, identifying alternative financial policies and practices, and helping to set realistic support goals.

STUDY DESIGN AND ORGANIZATION

In conducting the study, the first step was to develop an approach to higher education financing that included as many relevant components as possible about basic conditions in the state, the higher education process, and achievement levels. This development resulted in the inclusion of enrollment information, state and local government fiscal analyses, data on institutional structuring within the public and private sectors, conditions related to and affecting financing, and institutional revenues and expenditures.

To further facilitate analysis, the data in this report have been organized by topic, e.g., state financing, public institutions, trends, etc., each presented on a separate page. While these divisions serve to focus attention, it should be remembered that the topics are interrelated and should be studied jointly.

In developing this report, a variety of types of measures was used. The various measurement forms serve different purposes: (1) absolute amounts, as real-world elements of finance, permit verification; (2) relative terms, based on user or load units, establish comparability; (3) percent distribution identifies relative contribution; (4) constant dollars illustrate trends in purchasing power; and (5) indexes with respect to the U.S. average and state ranking identify variance and establish relative positions.

The principal means of analysis in this report is interstate comparisons. Every effort has been made to identify accepted measurements, establish relative values on common bases, and classify data in comparable environments to permit fair and meaningful comparisons. However, limitations in the data collected, the variability of accepted practice, and the distinctive nature of each institution make comparative analysis as much an art as a science.

The study is designed for use in the following types of analyses:

- Review of higher education's share of the state and local budgets in terms of it being one of many competing public services
- Role of state tax capacity, tax effort, and allocation rates in establishing appropriations to support higher education
- Study of tax capacity and effort measures for each type of tax as a means of assessing tax policy
- Review of the distribution of state appropriations to institutions and to students
- Study of FTE enrollment in comparison with national averages
- Identification of a state's student enrollment pattern by type of institution within the public/independent sector
- Evaluation of state and local appropriations and other revenues on a per student or other user basis by type of institution
- Evaluation of various institutional expenditures per student or other user basis by type of institution
- Review of trends in state and local government appropriations by type of institution relative to requirements imposed by enrollment growth and inflation
- Study of trends in tuition revenues as a percentage of instructional expenditures by type of institution
- Study of the effects of inflation on state and local appropriations, tuition and fees, and total educational and general revenues, and the associated gain or loss in purchasing power
- Study of trends in the mix of support for higher education by revenue source

- Study of the level and trends in faculty salaries by rank and by type of institution.

This study provides information about many aspects of state financing, but in every instance, these statistics should be supplemented with local information and data where available. Some of the components presented warrant expanded treatment, and the authors are presently investigating data for selected academic programs, student financial aid, student migration, and certain expenditures for inclusion in future issues of this study.

The focus of this report is on the states. Chapter 2 provides a summary of general trends from a national standpoint and observed patterns and trends among the states. State rankings are provided on state and local government finances, population and enrollment, institutional financing for public and private institutions, recent trend data, and faculty salaries. Chapter 3, which is the focal point of this study, presents individual state reports for all 50 states, the District of Columbia, as well as the U.S. average.

Appendix A includes a listing of all institutions in the states by their institutional category, as well as an explanation of the classification system used in this report. Appendix B presents documentation on the sources of data used in this report as well as cautions on data use.

EXPLANATION OF THE STATE REPORT ANALYSIS

Each state report presented in chapter 3 consists of eight topics—Commentary, State Financing of Higher Education, Public Institutions Status Report, Independent Institutions Status Report, Trends, Inflation-Adjusted Trends, Faculty Salaries, and Institutional Descriptors and Data Notes.

Commentary

The authors integrate the information in the data sections into a profile of state financing from which the reader may construct more detailed investigations. Although each commentary follows a basic standardized structure, deviations direct attention to special state conditions and accomplishments. Each state commentary is organized to describe recent trends, state financing of higher education, state tax base and budget, higher education enrollments, and institutional finance and characteristics. Some questions to which the commentary responds:

- Have state and local government appropriations kept pace with enrollments and inflation in order to preserve the purchasing power of institutions?
- What are the significant trends in appropriations and tuition in *constant* dollars for each type of institution?
- Is the state's provision of student aid and support to individual institutions appropriate given the proportion of residents attending public and private institutions?
- How wealthy or poor is the state in terms of its ability to support public programs through taxation, and to what extent has this tax potential been tapped?
- How important is higher education in the state budget when compared to other public services?
- Is the state's allocation of tax revenues to higher education consistent with enrollment levels and tuition policy?
- Are public enrollment levels consistent with state goals for higher education? Are college entrance rates, immigration, student retention, and proportion of full- and part-time students at desired levels?
- What is the structure of public and private higher education in the state? Which types of institutions enroll the most students, and how do enrollment patterns affect financial requirements?
- To what extent do residents attend colleges elsewhere?
- How do expenditures per student compare with national averages for each type of institution? In particular, how do institutions with the largest enrollments fare in this measure of financial strength?
- How do appropriations and tuition contribute to the adequacy or inadequacy of institutional expenditures?
- To what extent do sources other than state and student contribute to institutional support? Do any types of institutions appear excessively dependent on a single-income source?
- How has the mix of revenues by source changed over time, and what are the implications for future financing if the trend continues?
- How does the emphasis on graduate education or the size of institutions affect the financial requirements of institutions?
- What is the overall posture of faculty salaries in the state? Where are the strengths and weaknesses? Is the situation improving or worsening?

State Financing of Higher Education

This section presents an overview of state and local government support of higher education as one of many state services responding to public demand and competing for funding from revenues raised through taxation.

State and Local Government Support of Higher Education. Entries in the arrow present the fiscal actions of state and local governments in taxation and allocation of collected revenues to higher education. Distribution of the resulting government appropriations to higher education by sector and function is shown in the upper chart. Collectively, the data can be used to trace a path from potential tax capacity to ultimate recipient and the allocation decisions asociated with each step. The index numbers, relative to national averages, are of special value in gaining perspective on a state's unique allocation profile.

Although government decisions on funding public services are developed in a context of historical precedents and current political and citizen pressures, they nevertheless ultimately depend on the hard reality of state wealth and how it is secured and used in terms of tax rates and allocation percentages. These end products of the decision process are reported in the arrow, beginning at the left with *tax capacity* (an index of the tax potential inherent in the economy of a state), *tax effort* (the extent to which the tax capacity is actually used), and *allocation rate* (the proportion of collected tax revenues designated for higher education). Tax capacity multiplied by tax effort equals state and local government tax revenues collected. These collected revenues multiplied by the allocation rate equal state and local government appropriations to higher education. Tax capacity is relatively stable, fixed by the state's economy; both tax effort and allocation rate can be exercised by legislative action.

The index numbers are useful in suggesting how a high or low capacity may be taxed and allocated in such a manner as to achieve, in some instances, a near reverse level of appropriations. Thus, some relatively "poor" states can appropriate an above average dollar level per capita for education through high tax rates and assignment of a large budget share. The opposite is true for a few "rich" states that make limited use of their tax capacity and grant education a less than average share. The amount of taxes collected depends, of course, on far more than the financial needs of education; it depends for instance, on a state's economic strength, its citizens' willingness to pay, and the demand for public services. Once a state's tax rates have been set and revenues collected, the amount allocated to higher education depends primarily on student load, tuition, the structure of public institutions, and support for the independent sector. These factors governing the allocation rate are presented and explained in the "Status Reports" for both sectors.

The table above the arrow presents per capita dollar amounts and percent distribution of state and local government appropriations by function—student aid, general institutional support, other—and by sector. The U.S. average for state and local government appropriations for the operation of public colleges and universities is $78 per capita, and $1 per capita for independent institutions. The states spend $3.7 per capita for student aid, $1.4 in the public sector and $2.0 in the independent sector. Ninety-five percent of all state and local higher education support goes to the public sector.

Dollar values in this table are likely to be less informative than the mix of support and percent distribution. Using the index values, a state's higher education budget profile can be compared with national averages, and any exceptional deviation can be reviewed for consistency with state policy.

The five measures of state and local government finance used in this analysis are:

State and local tax capacity measures the potential of state and local governments to obtain revenues for public purposes through various kinds of taxes. Earnings of local residents are only one source of tax revenues; therefore, this tax capacity measurement is *not* equivalent to per capita personal income. Tax capacity is measured here by "representative tax system," [1] which defines the tax capacity of a state and its local governments as the amount of revenue they could raise (relative to other state and local governments) if all 50 states and local systems applied *tax rates at the national average* to their respective tax bases. The sum of the capacities for all states equals the total tax revenues collected in the United States. The tax bases represent, for each of the various kinds of state and local taxes, the degree to which taxable activity exists within the jurisdiction. For example, for the general sales tax, the tax base is the dollar value of retail sales in the states; for a motor fuel tax, the volume of highway fuel consumption, etc. The tax rates applied are based on the average amount of taxes collected nationwide as percentages of the total U.S. tax base activities; e.g., if 5 percent of total general sales is collected in taxes nationally, then 5 percent is the rate applied to the level of general sales in each state. Thus, the tax (or capacity) in a state is the *level* of economic activity being taxed, multiplied by a common tax rate.

The extreme values in relative tax capacity are from $1,210 per capita, or 55 percent above the national average in Wyoming, to $542 per capita, or 31 percent below the national average, in Mississippi. This ratio signifies that Mississippi has only 45 percent of the inherent tax wealth of Wyoming to support higher education and other public services. For all states, tax capacity establishes the inherent wealth on which financial support of public services, including higher education, is dependent. States with low tax capacity are at an inherent disadvantage and must tax at higher rates to raise collected revenues to the levels of states with greater economic strength. Yet if citizens are unwilling to be taxed, then tax-poor states may have to compromise in meeting certain public service needs.

---

[1] The "representative tax system" approach to capacity measurement was initially developed by the Advisory Commission on Intergovernmental Relations (Mushkin and Rivlin) and recently simplified for yearly computation by Robert Reischauer and Kent Halstead. See Halstead, *Tax Wealth in Fifty States*, U.S. Government Printing Office, Washington, D.C., 1978, 255 pp., stock no. #017-080-01871-3

Tax effort measures, in percentage terms, how much of state and local government tax capacity is actually used. Tax revenues collected for all states equal the total tax capacity nationwide. Since the nationwide effort by definition is 100 percent, the effort index for individual states indicates how they each compare with the national average. The state making the greatest tax effort is New York, with an index 62 percent above the nationwide average. At the low extreme is Nevada an effort index 37 percent below the average. Thus, for every potential tax dollar obtainable at national average rates, New York collects $162 while Nevada collects $63—a ratio of 2.6 to 1.

State and local tax revenues represent the wealth available to state and local governments for public use. The index essentially identifies "rich" and "poor" states according to the size of their bank accounts. Tax revenues are an end-product of tax capacity and effort. Thus, states with low capacity but high effort can still raise an average amount of tax revenues. Rhode Island, for example, ranks 41st in tax capacity, 13 percent below the national average, but ranks 7th in tax effort, 14 percent above the national average. As a result, its collected revenues of $779 per capita nearly equal the national average of $782. By contrast, some states with above average capacity exert low effort and achieve less than average revenues. Florida, with tax capacity ranked 15th and tax effort 47th in the nation, is a typical example. With potential to collect $814 in taxes per capita, Florida secures only $594, $188 less than the national average.

In collected revenues, Alaska is the richest state, with $1,201 in tax revenues per capita, 54 percent above the national average. Alabama and Arkansas are the poorest states, each collecting about $482 per capita. This information, however, must be tempered by the fact that some states have far greater social needs than others. These needs increase the competition for funding so that even rich states may experience difficulty in financing certain public programs. Some apparently poor states, on the other hand, may have less than average public service requirements, thus making support dollars more readily available. Also to be taken into account in interstate financial comparisons are price differences among the states that affect the purchasing power of government revenues. Although no geographical price indexes for government services are available, some indication of the differences in labor costs, for example, is evident from Bureau of Labor Statistics salary data for office/clerical workers. In 1976, an index of salaries of office/clerical workers ranged from a high of 145 for Alaska to a low of 84 for Idaho.

Allocation to higher education reports the percent of state and local tax revenues that are appropriated for general institutional support, student aid, and such "other" purposes as payments for central state services for libraries and computers, central administrative expenses, and fringe benefit and retirement payments to postsecondary personnel. State funding of capital investment is excluded. This ratio suggests the relative importance of higher education in the funding of public services within state and local government budgets. Higher education must compete with other public service programs for greater allocations. Relatively low appropriations per student, compared with more favorable unit funding of other services, suggest that higher education should receive a greater share of the state budget. Although unit loads for various public services are difficult to construct, initial studies suggest that some states vary greatly according to national rankings in adequacy of funding selected programs. For example, in 1974-75 Delaware provided state and local support to elementary and secondary schools on a per pupil basis that was 17 percent *above* the national average, while support for police protection relative to an index of crime incidents per capita was 34 percent *below* the national average.[2] Such evidence may be persuasive in realigning budget priorities. The 50 states allocate an average 11 percent of state and local tax revenues to higher education for operating expenses of public institutions.

State and local appropriations to higher education indicate the relative financial load placed on the public in supporting higher education (exclusive of capital support). U.S. citizens spend an average of $87 for higher education, with Wyoming spending the largest amount per capita ($183), followed by Alaska ($155). New Hampshire ($44), Maine ($48), and Pennsylvania ($52) spend the least. However, appropriations per capita is a state-level measure of the commitment of residents to support higher education; it is not a measure of the adequacy of that support at the *institutional* level. (The two institutional "Status Reports" present institutional revenues and expenditures related to *students*.)

Enrollments. This brief summary starts with an indication of the population of the state followed by the FTE enrollment in higher education in the state, including the distribution between the public and private sectors. The sections headed "enrollment of state residents per 1000 population" provide a key measure of student access for the state. The number—total enrollment of state residents—indicates the extent of access of residents to higher education irrespective of where they attend. The components listed above this total indicate where such access is sought (i.e., at the state's public or independent institutions or through out-of-state colleges).

State and Local Governments' Direct General Expenditures by Function. The pie diagram indicates the state and local government budget[3] for seven public services in percent distribution and total dollars per capita. The financial support given any public service depends on many factors; the most important ones are public demand, unit costs, government capacity to finance, and competing claims. Certain universally recognized needs, such as elementary and secondary schooling and health care, receive more uniform attention by states and communities and show less variation in per capita funding than the more elective public services, such as welfare and higher education. State support of colleges and universities depends a great deal on a state's philosophy on what constitutes adequate provision of "educational opportunity," who should pay based on interpretation of who benefits, and standards regarding acceptable geographical and program access. State history, citizen expectations and attitudes, urbanization, climate, educational opportunities in adjacent and nearby states are some factors that influence decisions in these areas. Those few states that have decided not to be in the higher education "business" as much as others are at the extreme of negative response. They intentionally plan to be "debtor" states by encouraging residents to attend out-of-state schools through extensive student aid programs. Although the data presented here are far too limited to convey details, they do provide an impression of the relative standing of higher education in a state budget (by use of the index numbers) and of any directional trends.

Tax Capacity and Effort

The chart at the lower right of the page presents tax capacity and effort data for 11 individual taxes, as well as for all taxes. Collected revenues and over- or under-utilized potential are reported for each tax, together with related rankings and national averages. The relative importance of the various tax bases as potential revenue sources is indicated by the percent distribution of capacity.

Knowledge and understanding of fiscal capacity and taxing effort are inherent responsibilities of education financers and of elected officials charged with providing government services and taxation policies. When the adequacy of higher education or any government support service is challenged, questions arise concerning fiscal capacity and effort. How does our state compare with its neighbors in its ability to raise money through taxes? Do we realize as much revenue from our tax sources as states with similar capacity and economic structure? These initial inquiries generally lead to contemplation of changes in specific tax rates or to a decision to promote growth in certain tax bases. This contemplation, in turn, leads to such questions as: What is the size of the actual or potential baes for a given tax in our state? To what extent is this base taxed in other states, and how do we compare? If we tax the base at the effective rates used by our neighboring (or similar) states, how much additional revenue could be collected? Is it possible to change state or local ordinances so as to expand the tax base? And, if so, what additional revenues might be raised? The chart of tax capacity and effort presents the type of data available for answering these questions.[4]

Public Institutions Status Report: Independent Institutions Status Report

The "Status Reports" for both the public and independent sectors are the same except for methods used to derive enrollments (presented in the arrow), and the revenues categories used (i.e., for the independent sector, private gifts and endowment income are shown separately, whereas for the public sector these revenue categories are shown in a single combined measure.) Each report contains four parts: the principal entries for "Institutional Revenues" and "Institutional Expenditures," and two supporting entries for "State and Local Finances Per Capita" and "Enrollments."

In the broadest terms, proceeding from top to bottom, the status reports show how state and local government appropriations, allocated by type of institution, interact with related enrollments per capita and result in appropriatoins per student that, together with other institutional revenues, support institutional expenditures. The number of institutional type classifications and provisions for revenue plus detailed expenditures are important in establishing meaningful comparisons.

The upper part of the arrow shows *appropriations* for the public and independent sectors derived by proportioning total state and local government appropriations to higher education (explained in the arrow in the "State Financing of Higher Education" diagram). In the lower part of the arrow, *enrollments* in the public sector begin with high school graduates and eventually reach institutional enrollments through a series of entrance and retention rates and the addition of out-of-state students. In-state and out-of-state enrollments are combined to equal enrollment in the independent sector. Because the fiscal capacity and responsibility for funding higher education rests ultimately with the state's total population, both enrollments and appropriations are presented on a per capita basis.

---

[2] Ibid. Appendix A. Fiscal Capacity and Revenue Requirements.

[3] The state and local government total budget per capita (pie diagram) is substantially larger than the amount of taxes collected per capita (lower right table) because the budget includes non tax revenues, exceptional types of tax revenues not reported as part of the "representative tax system," and a difference due to the 1979 versus 1977 reporting date. The state budget for higher education per capita is larger than total appropriations for higher education (upper left table) because the budget includes (and appropriations exclude) funding of auxiliary enterprises, capital investment, Federal revenue sharing funds, independent operations, and revenue for centrally funded offices, faculty fringe benefits, and student aid when they are not part of an institutional account.

[4] For more detail, readers are advised to contact the Advisory Commission on Intergovernmental Relations, Washington, D.C., 20575.

The end products of the information in the arrow—appropriations per capita and total enrollments per capita—are listed to the right of the arrow according to the state's institutional profile. This detailing by institutional type establishes the classification refinement necessary for realistic interstate comparisons of revenues and expenditures. Appropriations per capita are then divided by enrollments per capita to obtain the per student amounts below that, together with incomes from other sources, constitute *institutional revenues*. Finally, *institutional expenditures* are presented as the end use for secured revenues.

Comparing the per capita amounts provides an immediate understanding of the relative balance between appropriations and enrollments. The U.S. average for the end products listed in the arrow is 100. Individual states will, of course, not have this balance, and the degree of imbalance is a first indicator of the strength or weakness of state support for higher education. For example, if appropriations per capita are indexed at 80 and enrollments at 120, support per student will be 67 percent (80/120) of the national level.

State and Local Finances. The allocation of state and local government tax revenues to higher education (repeated from the previous page) followed by the further allocation to *public/independent institutions* shows how both aspects of the allocation process are used to reach the institutional funding level. Subsequent analyses of the adequacy of this financial support will be made by assessing the data on institutional revenues and expenditures. Deficiencies noted in per-student amounts may be traced back to a below average allocation of state and local government tax revenues. As previously discussed, the national average allocation rate of tax revenues to higher education is 11 percent. Of this amount, nearly 90 percent is allocated to public institutions, 1.2 percent to independent institutions, 4 percent to student aid, and the remainder to uses not separately identified. Although many factors contribute to institutional financial strength, these allocation rates are of particular importance in formulating a state's budget.

Public/Independent Enrollments. Enrollments are a primary measure of the workload carried by colleges and universities. Public enrollments reflect a number of conditions: the degree to which the state's high schools prepare pupils for college entrance, the opportunities within the state for postsecondary enrollment, the attractiveness of the state's institutions to nonresidents, and year-to-year retention rates. Improving these conditions are typical educational goals of states. Therefore, state planners generally consider the magnitude and derivation of public enrollments when analyzing financial support requirements. Many state budgets, in fact, are based in part on enrollment-driven formulas.

Because independent institutions typically draw a more universal clientele than public institutions, often enrolling more out-of-state and foreign students than state residents, they rely little on state funds. Thus, they generally feel less responsibility for educating residents than do public colleges and universities. Therefore, the derivation of FTE enrollments for independent institutions is simplified here to equal the sum of resident and out-of-state enrollments.

In the public sector, the derivation of FTE enrollments as a measure of the state's basic educational load begins with state high school graduates as primary college entrants. To facilitate interstate comparisons, all enrollment measures are reported in terms of the supporting state's population (per 1,000 residents). The number of in-state high school graduates multiplied by their rate of entrance to state institutions provides first-time resident enrollments. Adding first-time out-of-state students yields total first-time enrollments. Multiplying this number by a retention factor to obtain total enrollment and a factor to convert headcount to FTE enrollment results in total FTE enrollment in public institutions.

FTE enrollment per 1,000 population is a basic input factor in this analysis. It represents the student load supported by state appropriations. The states average 28.9 FTE students in public institutions per 1,000 state residents, with a range of from 48.0 FTE students in Arizona to 10.4 FTE students in the District of Columbia. This is a remarkable variance in so basic a factor, and suggests the importance of each causal condition discussed below.

High School graduates make up approximately 90 percent of first-year students at public institutions.[4] The U.S. average is 13.1 public high school graduates for every 1,000 persons. Forty states have between 11 and 15 high school graduates per 1,000 persons; the others show greater variances, from a low of 7.7 per 1,000 in the District of Columbia to a high of 17.1 per 1,000 in Minnesota.

The *entrance rate* reports first-time resident enrollment in public institutions as a percentage of high school graduates. This rate reflects the attractiveness of the programs, student charges, and locations of state public institutions compared to alternative private school and out-of-state educational opportunities. It also suggests the preparedness of high school graduates for college, and student, parental, and community disposition towards attendance at state institutions. The entrance rate is usually the most important factor in determining a state's final FTE enrollment level, and the conditions contributing to high or low rates should be studied. The average entrance rate for the United States is 61.8 percent, with a high of 133.9 percent in Arizona and a low of 29.0 percent in Vermont. High entrance rates indicate that substantial numbers of adults are entering college and continuing their education some time after high school graduation.

First-time resident enrollment is a headcount of resident students enrolled for the first time at public institutions of higher education. They average 8.1 per 1,000 residents. The range is from a low of 4.0 per 1,000 in Vermont to a high of 15.9 per 1,000 in Arizona. This wide variation indicates fundamental differences in how state residents feel about the response of public higher education to their needs.

In-migration is a headcount of nonresidents enrolling for the first time in public institutions in the state per 1,000 population. Factors influencing in-migration include low nonresident tuition, academic reputation, program offerings, topography and climate, and successful competition for nonresident students. On average, less than one person (.7) per 1,000 population travels to another state for public higher education. Alaska (4.7 per 1,000), Arizona (4.2), and Delaware (3.5) lead the country in the enrollment of first-time out-of-state students. The District of Columbia (.1) and New Jersey (.1) have the lowest out-of-state first-time enrollments.

First-time enrollment is the sum of resident and nonresident students enrolling for the first time. On average 8.8 students per 1,000 population enroll as first-time students. Arizona leads the nation with 20.1, in contrast to the District of Columbia with only 4.3 first-time students per 1,000.

The *retention factor* is the ratio of total headcount enrollment to first-time headcount enrollment in public institutions. The retention factor expands first-time enrollments into total enrollments and reflects the proportion of students who continue their education beyond first-time enrollment. State systems that emphasize upper division, graduate, and professional education show high retention factors. Those that focus on 2-year terminal programs have lower values. Selectivity of admissions and success of the institutions in meeting student needs also affect retention. An average of 4.6 total students are enrolled for every first-time student attending public institutions in the United States. Washington has the highest ratio, 13.2; Wisconsin and North Carolina have the lowest, 3.2.

The *conversion factor* in public institutions is the ratio of FTE enrollment to total headcount enrollment, thus reflecting the degree of full-time as opposed to part-time enrollment. High ratios suggest conditions and programs that encourage or require full-time enrollments. Low ratios may be due to numerous graduate and continuing learning programs where part-time attendance is common. While institutions vary in their definition of FTE, a simplified rule used by the Department of Education is that part-time students equal one-third full-time attendance. The average conversion factor for public institutions in the United States is .7 FTE students for a headcount of one student. Most states show ratios similar to this average. Five states have the highest rate (.9), three states, the lowest (.5).

FTE enrollment in higher education per 1,000 population is the load measure used in this analysis at the aggregate state level; at the institutional level the population base is dropped. In the public sector FTE enrollment is computed by multiplying first-time enrollment by the retention and conversion factors. In the independent sector FTE enrollment is the sum of resident and out-of-state enrollments. Although student enrollment is only an approximate load measure for revenues and expenditures, it is probably the best *single* measure. However, it should be remembered that the financing required for many institutional operations (such as administration, plant operation and maintenance, libraries, public service, and research) are only indirectly proportional or even unrelated to the numbers of students enrolled. (In this study, two other load measures are employed: number of faculty as the base for government grants and contracts, revenues, and expenditures, and population for public service expenditures).

Institutional Categories and Enrollment Profile. To the right of the arrow, institutional support per capita and FTE enrollments per capita are shown by institutional category. The share of total enrollments for any of the 10 institutional categories can be computed by dividing a category's FTE enrollment by the total enrollment for the sector. The categories reported are the minimum number required to establish reasonable comparability at the state level.[6] They are: *research-universities* that grant doctorates and sponsor research programs exceeding $50 million yearly; *universities* granting substantial numbers of doctorates but conducting less than $50 million annually in research (both types of universities are then subclassified as either with or without medical, dental, osteopathic, or veterinary programs); *comprehensive* institutions granting graduate degrees, primarily at the master's level; *general baccalaureate* institutions awarding most degrees at the bachelor's level; *two-year academic and comprehensive* colleges emphasizing associate and certificate degrees; *two-year*

---

[5] Alexander W. Atsin, Margo R. King, Gerald T. Richardson, *The American Freshman: National Norms for Fall 1976*, American Council on Education and the University of California, Los Angeles, Calif., p. 19.

[6] Uniform further refinement of institutional groups would likely double the number of categories without compensating improvement in comparability. Comparability can be improved within the existing structure by limiting analysis to comparable institutions selected for known similarities beyond the classification system used here. Also, computer tapes of these data can be secured from NCHEMS and/or special analyses can be conducted based on selected individual institutions.

occupational colleges granting associate and certificate degrees primarily in occupational fields; *health professional* colleges granting degrees in a variety of medical first-professional areas; *other professional and specialized* institutions including single-program medical schools, engineering schools, teachers colleges, law schools, rabbinical schools, and seminaries. The categories are defined in detail in Appendix A.

The distinguishing characteristics of the various types of institutions influence financing. Because institutions have relatively distinct missions, instructional programs, and student levels, they also differ in faculty requirements, faculty salary schedules and workloads, class size, necessary supporting equipment, student personnel services, administrative overhead, plant size, and other operating conditions that affect costs. Though factor values vary within each category and the categories merge at their boundaries, such intra-group differences and overlap are relatively insignificant compared to the substantial differences that exist between the categories themselves. Very basic and fundamental differences are reflected in the mean or median revenues and expenditures between institutional type categories.

In states where large proportions of students attend universities with their inherently expensive complex of programs and degree levels, the support requirements are high. In states where enrollment emphasis is on 2-year colleges, which are far less expensive to operate, support requirements for the total public system will be substantially less.

The proportional spread of enrollments by type of institution shows some decided emphases. At one extreme is California, with 60 percent of public enrollments in 2-year colleges, 27 percent in comprehensive institutions, and 13 percent in major doctorate-granting institutions. In contrast, Ohio has 60 percent of its enrollments in major doctorate-granting institutions, 14 percent in comprehensive colleges, and only 25 percent in 2-year colleges. Nevada represents a bimodal emphasis, with 61 percent of enrollments in comprehensive institutions and 39 percent in 2-year colleges.

Because these differences in enrollment patterns greatly affect total funding requirements, it is important that states understand how their structures differ from those of other states and how the structures affect funding. This knowledge will encourage development of an overall plan for financing based on an independent analysis of need for each type of institution within the system.

Institutional Revenues and Expenditures. Since institutional revenues and expenditures per user unit represent the financial bottom line, the analysis is now directed at the individual types of institutions.

The indexes for revenues and expenditures are computed using U.S. averages for each of the institutional categories, rather than averages for each state's entire public/independent system. Thus, the revenues and expenditures for a given type of institution in one state can be compared with values in other states and with the national average. Since enrollment is the basic load for instructional and related supporting activities, most revenues and expenditures are reported on a per student basis as the user element. Government contracts and grants (mostly sponsored research) are reported per faculty member, and public service expenditures per 1,000 population. The lower part of the diagram presents a percent distribution of revenues and expenditures, including indexes relative to the U.S. average.

Institutional Revenues. The revenues presented are for current operations relating to the institution's educational mission and immediate supporting activities. These E&G revenues exclude income from sales and service of auxiliary enterprises, hospitals, independent operations, and revenues for physical plant construction.

For a given institutional category, the dollar amounts for each type of revenue should be checked against national averages and levels in other states. A large contribution from a single source may compensate for low funding from other sources and help to achieve a near-average level of total revenues. Such an imbalance can be seen in the percent distribution figures, which would show a skewed deviation from national averages. This information can be used as supporting documentation in identifying and encouraging funding from low income sources. In the public sector, state and local government appropriations and student tuition are two income sources that, in particular, should come under careful scrutiny in terms of both adequacy of dollar amount and distribution of revenues. In some states, appropriations and tuition levels are quite inconsistent with national averages, a variance that should be reviewed with state objectives for support and equity. The data could give rise to many questions. Students may find it difficult to understand higher-than-average charges at one type of state institution and less-than-average charges at another. Also, students and parents may question high tuition charges in one state in comparison to low tuition charges in other states. Faculty may challenge low total revenues or the imbalance of revenues among institutional types. While these questions may not be answered by present prescribed policy, certainly future legislative and budget decisions should be responsive to such challenges of equity and adequacy.

These are brief definitions of each revenue category with more detailed information in Appendix B.

State and local government appropriations: Appropriations, excluding grants and contracts, made to institutions by state and local government legislative bodies for current operations.

Tuition Revenues: Tuition and fee charges assessed students for current operating purposes, including those amounts remitted to the state to offset its appropriation.

Private gifts, grants, and endowment income: Gifts and grants from donors, for which no legal consideration is involved, and income received from endowment and similar funds and expended for current operating purposes.

Other E&G (excluding government contracts): Federal government appropriations (mostly to land-grant institutions); revenue from sales and services of educational activities, such as film rentals, scientific and literary publications, testing services, university presses, and dairy products; and revenues from sources not covered elsewhere.

Total E&G (excluding government contracts). An intermediate revenues total that provides a measure of general operating funds excluding government grants and contracts (i.e., research and training funds). This is a key measure to compare to assess the adequacy of operating funds at each category of institution. Some adjustment should be made, however, for the relative extent of graduate education in a sector or average size of the institution since these conditions affect funding needs.

Government grants and contracts: Revenues (both direct and indirect) from government agencies for specific research projects and training programs (expressed on a per faculty member basis).

Total E&G revenues: This total of *all* E&G revenues, including sponsored research, cannot be related to a single user unit and is therefore reported only in absolute dollar amounts.

Although low support from individual sources can be tolerated if it is offset by high funding from other sources, low level *total* support (usually calculated on the basis of total E&G revenues, excluding government contracts) generally cannot be justified. Perspective on the relative status of total revenues can be obtained by comparison between state and national averages and from the state rankings for each institutional category. More immediate and relevant than rankings are interstate comparisons of per student total E&G revenues, excluding government contracts, for sets of comparable institutions.

The percent distribution chart across the bottom of the page can be used to gauge the importance of each individual revenue source. The type of institution strongly affects the role of each source and the pattern of support. The importance of tuition, for example, ranges from a national high of 82 percent at independent 2-year occupational colleges to a low of 3 percent at public health professional schools. Endowment income is most important at independent colleges and very low at public 2-year colleges.

Institutional Expenditures. The national average dollar amounts per student for the various types of institutional expenditures can be viewed as typical "costs" of education. Deviations from the national norm result from a whole set of institutional conditions that differ from the hypothetical "average" circumstances. Although, within institutional categories, differences in the variables affecting expenditures have been partially restrained by features common to the group, many individual institutional differences remain. Also, certain external factors (e.g., an unexpected depletion or windfall in financial support or a substantial difference between projected and actual enrollments) occasionally occur to significantly alter expenditures from category norms.

Significant differences in the mix of expenditures from national averages should be studied for consistency with stated goals and objectives. Often, expenditure patterns are based on historical precedent and unadjusted trends, resulting in a profile that is inconsistent with the institution's current situation and mission. The percent distribution table and the degree of variance from national averages can assist in an initial examination of this possibility.

The E&G expenditure components, more fully defined in Appendix B are:

Instruction: Expenditures of the colleges, schools, departments, and other instructional divisions for all types of instruction, as well as expenditures not separately budgeted for departmental research and public service.

Academic Support: Expenditures for libraries, academic administration and personnel development, computing service, and other services that are an integral part of the institution's primary mission of instruction, research, and public service.

Research: Funds expended for activities specifically organized to produce research outcomes and commissioned by an external agency or separately budgeted by the institution. Research expenditures are reported on a per faculty member basis.

Public Service: Funds budgeted specifically for public service and expended for actcivities established primarily to provide noninstructional services to groups external to the institution. Public service expenditures are reported per 1,000 state population.

Other E&G Expenditures: Expenditures for student services (admissions, career guidance and counseling, health, etc.), institutional support (general administrative services, planning, legal, and fiscal operations), plant operation and maintenance, student scholarships and fellowships, and mandatory transfers for auxiliary enterprises.

Total E&G Expenditures: An aggregate dollar amount that indicates the relative importance of funding size (i.e., the importance of expenditures for each institutional category as part of the overall sector budget).

Trends

The trend diagrams report 1975 and 1979 enrollments and revenues in absolute amounts and show the percent change and relative distribution.

Of special importance is the four-year trend in state and local government appropriations to public institutions relative to enrollment growth and inflation, which is illustrated in the chart on the left-hand page. The absolute level of these appropriations has increased significantly in every state during the last four years, the national average increase has been 47.5 percent, with Alabama the highest (99.6 percent) and Connecticut the lowest (−9.2 percent). Enrollment during this period increased 6 percent nationally.

According to the Higher Education Price Index (HEPI), the prices colleges and universities paid for goods and services show a 30.5 percent rate of inflation between 1975 and 1979. When inflation is taken into account, appropriations per student in constant dollars show an increase of only 6.6 percent during that period. State and local governments failed to boost appropriations sufficiently to keep up with enrollments and inflation in 15 states.

The top section of the trend pages provides data by institutional category. Comparisons in yearly growth between state and local government appropriations and enrollments can be studied on the left, and the consequences of inflation on appropriations, tuition and fees, and total E&G revenues on the right. Since all absolute dollar amounts have increased in recent years to meet the requirements of expanding enrollments and to offset inflation, the effects of these two factors must be excluded if a trend on the real adequacy of financing is to be established. Thus, dollar amounts are reported on a per student user unit basis, and constant dollars of equivalent purchasing power are obtained by dividing actual dollars by the Higher Education Price Index.

Study of a state's status in the various areas relative to the national average (index numbers) provides initial insight on relative position, and further perspective can be gained by knowledge of the "extremes." The largest four-year gain in constant dollar appropriations per student occurred in Nevada (46.4 percent); the largest four-year loss in Alaska (35.4 percent). For tuition and fees, the largest four-year gain in the public sector occurred in Arizona (48.1 percent); the largest loss in Alaska (42.6 percent). In the independent sector, these extremes were 51.9 percent gain in Alaska and 14.2 percent loss in South Dakota.

In recent years, decreased purchasing power due to inflation in the general economy has become a serious problem for colleges and universities. Institutions must pay more for all goods and services purchased, particularly heating oil, power, and various types of equipment. Also, faculty and administrative salaries should be increased according to the Consumer Price Index if employees are to maintain their standard of living. Faculty salaries, however, generally have not kept pace with the CPI, and colleges and universities have thus suffered less from inflation than if they had not achieved this "saving" in costs. Nevertheless, inflation affecting colleges and universities as measured by HEPI has increased from 5 to 6 percent at the beginning of the decade to 9.9 percent in 1980.

In many instances, state appropriations and other income have not kept pace with the tandem demands of enrollment growth and inflation. Often, these losses are not made up in subsequent years so that an accumulated deficit in purchasing power per student occurs, with an attendant reduction in financial strength. Since such erosion may not take place uniformly and may be corrected in some instances, institutions and states should monitor trends in purchasing power per student or other user base for *each* type of revenue and expenditure. Some revenue sources may be encouraged to maintain pace with expanding requirements. The maintenance of purchasing power for some types of expenditures may be more important than for others. Also, for some expenditures, it is important that *gains* be made in unit purchasing power to cover additional costs of new and more advanced technology, which could be essential in maintaining the institution's competitive and academic position. Thus, trends in the various revenues and expenditures should be monitored to record responses to three load factors: enrollment, inflation, and quality maintenance and improvement.

The trend analysis has three additional components: enrollment mix, tuition, and mix of support. Public and independent enrollment mix for 1975 and 1979 are shown in the pie diagrams. In the public sector, the enrollment pattern is most often established by the emphasis given to 2-year colleges in providing the first years of undergraduate education. Over the four-year period, there was a slight increase in the proportion of public students attending 2-year colleges, from 34.0 percent in 1975 to 36.4 percent in 1979. Indexes can be used in this manner to determine variance between state and national trends. Indexes moving toward the national average of 100 indicate that the state's enrollment mix or other measured condition is coming in to line with the national profile; indexes moving away from 100 indicate divergence from the national average.

In the lower portion of each page are bar graphs depicting tuition revenues as a percentage of instruction expenditures (left) and mix of higher education support (right). Tuition primarily pays for instruction and related overhead costs of administration, library, and plant operation and maintenance. Tuition charges seldom equal these costs, with the share varying from state to state by institutional type. Decisions in setting the level of tuition are based on costs, family ability to pay, student demand as affected by price competition from other institutions, and state philosophy regarding the citizen's "right" to postsecondary educational opportunities. Public 2-year colleges, viewed as a democratic open door to continued education, traditionally have charged the least tuition. Private universities with strict entrance requirements, a nationally drawn student body, and high dependence on student tuition as a source of income, traditionally have charged the most. Yet, there is considerable overlap. The tuition at public 2-year colleges in some states is greater than the amount charged at certain public universities. Tuition at many of the less expensive, independent four-year colleges is not much greater than at their more expensive public counterparts. Although no single indicator can explain and justify decisions regarding tuition levels, reference to instructional costs appears to be a most direct consideration. What the student pays should bear some consistent relationship to the immediate costs of his/her education (with individual adjustments for ability to pay or with offsetting financial aid as necessary to establish equal opportunity). Trends in this relationship for each type of institution in both sectors are shown at the bottom of the left-hand page. Any substantial deviation from the national averages should be reviewed for consistency with state objectives. Further, the trends should be studied to see if tuition has been keeping pace with costs for each type of institution.

Trends in the mix of support by source for 1975 and 1979 are presented on the right-hand page. There is a great deal of inertia in the overall funding pattern of both sectors. Gradual shifts over time should be thoroughly investigated, in order to prepare for times of financial stress, when every source of funding requires maximum encouragement and any decline in relative contribution, if allowed to continue, could threaten institutional solvency.

Faculty Salaries

Faculty services are the single largest purchase of colleges and universities, accounting for nearly half their current operating expenditures. Thus, small changes in salary levels produce large changes in the institution's overall budget compared to similar price changes for items purchased in lesser quantity. It is therefore usually necessary for institutions to adjust salaries on a yearly basis to avoid a backlog that might extend beyond the institution's capacity to correct.

To remain alert to new requirements and allow time for adequate financial planning, colleges and universities must consistently monitor national trends in salary data. They should check three specific areas: the institution's relative position within its peer or competing groups, its consistency in remuneration by rank within the institution, and its maintenance of faculty purchasing power. The data presented here report average state salaries for 9- to 10-month full-time faculty by academic rank and institutional category. The index values report relative positions compared to the U.S. average equal to 100.

One of the most serious problems facing American colleges and universities in this decade will be recouping the loss in purchasing power suffered in the past decade. In the 1960s, yearly gains in faculty salaries always exceeded cost-of-living increases measured by the Consumer Price Index (CPI) by at least 1 percent yearly and by as much as 3.5 percent at the beginning of the decade. Since 1971, however, increases in the CPI exceeded increases in faculty salaries every year, except for the 1973 recession, by an average 2.3 percent, hitting a maximum difference of 6.2 percent in 1980. The accumulated loss in purchasing power and standard of living since 1970 is 19.3 percent. This deficit could be made up if faculty salaries are increased about 5 percent more than the inflation rate for the next five years.

Institutional Descriptors

The more detailed comparisons of financial data presented in this study are conducted at the institutional level. The 10 institutional categories are described in Appendix B. The additional data presented here include the number of state institutions in each category, their mean size, their FTE enrollment, and the percent distribution of enrollment by academic level. The index numbers (U.S. average = 100) indicate the comparison with national averages.

These data should be used to check the degree of similarity of state institutions to institutional categories. The definition of each category establishes a relatively restricted group of institutions that share many common characteristics. A large variance in data from the group national average suggests inconsistency with the common characteristics and substantially less comparability. The mix of enrollment by student level, in particular, has a significant impact on institutional expenditures. Education programs are usually more expensive to operate at upper levels because of progressively smaller classes, more extensive employment of higher ranking faculty, and, in some instances, the need for more costly equipment. State institutions that have enrollment patterns skewed toward upper and graduate levels relative to national averages are therefore likely to need proportionately greater revenues and expenditures. Thus, enrollment profiles of state institutions in each category should be checked against national averages to determine group compatibility and any significant differences noted in the analysis.

The data notes consist of a summary of special state circumstances that affect the data as collected by HEGIS. More specifically, information is provided on unique debt and service arrangements, tuition and fee reappropriation, and other special circumstances necessary for interpretation of the data presented in this report, based on a special survey of the states.

CHAPTER 2: GENERAL TRENDS AMONG THE STATES

Summary Findings

State and local government funding of public higher education increased 8.9 percent in 1979, a level slightly greater than the 7.7 percent price increases in that year.[1] Also, largely because full-time equivalent (FTE) enrollment in public institutions declined 2.0 percent, public institutions had a net *gain* of 3.0 percent in the real dollar value of their appropriations per student. As these figures indicate, 1979 should be included among the years of general improvement for higher education.

All but three states increased appropriations in FY 1979. The leader, Virginia, increased appropriations by 32.5 percent, followed by West Virginia at 30.7 percent, North Dakota at 25.3 percent, and Mississippi at 18.2 percent. (The three states that reduced overall appropriations were Alaska, California, and Wyoming.) Public FTE enrollments in 1979 decreased overall by 2.0 percent. Largely because of this decrease in the number of students to support, constant dollar appropriations per student increased in 38 states and decreased in 11: Alaska, California, Florida, Hawaii, Maine, Montana, New Hampshire, New Jersey, Oregon, Pennsylvania, and Wyoming.

Appropriations Per Capita

Wyoming led the nation in its support of higher education in 1979 by providing $182 per capita, a level more than twice the U.S. average of $87 per capita. Alaska was next in its level of support at $155, followed by Hawaii at $142, California at $128, and Washington at $118. New Hampshire spent $44 per capita on higher education, the least amount of tax dollars of any state; it was followed by Maine with $48, Pennsylvania with $52, New Jersey with $60, and Massachusetts with $61. Other measures of need—i.e., enrollment load, expensiveness of the higher education system, contributions from other sources—are required to determine the adequacy of state funding. Therefore, the rankings contained in tables 1 through 3 should be used only as indications of the amounts appropriated by state budgets for higher education and of the mechanism (institutional appropriations or student aid) selected by these states.

a. State and Local Student Aid

In 1979, 43 states supported higher education through student aid, averaging $3.70 per capita. New York led the nation, providing $14.30 per capita in student aid. Vermont followed in second places with $8.60, Illinois in third place with $7.20, Pennsylvania in fourth place with $6.20, and Colorado and Minnesota in fifth and sixth places with $5.20 per capita each. Only eight states provided no student aid support: Arizona, Hawaii, Montana, Nebraska, Nevada, New Mexico, Rhode Island, and Utah. Thirty-five states provided support to students attending public institutions, and 30 states provided aid to students attending independent institutions. Although more states provided student aid to students attending public institutions, these students received a smaller share, 40 percent, of total state student aid funds. State student aid totaled nearly $800 million in 1979, a 60 percent increase over 1976 levels. Nonetheless, student aid represented only 4 percent of the total higher education support provided by states. Traditionally, student aid has been the province of the federal government. The extent to which the federal government will relinquish this role, as currently discussed by the Reagan administration, and whether states will assume responsibility to any significant degree is still unclear. The figures in this study, however, indicate that to date states have had a relatively minor role in student aid.

b. Appropriations to institutions

Over 90 percent of state funds allocated to higher education was channeled directly to institutions in the form of appropriations. On average, the states spent almost $80 per capita in 1979 for institutional support, with almost all of these funds going directly to public institutions. On average, states provided only $1 per capita to independent institutions. And, only 22 states provided such funding to the independent sector, led by New York at $4.40 per capita and Pennsylvania at $3.50 per capita. Surprisingly, Massachusetts, the state with the largest number of state residents enrolled in independent institutions (see ranking table 22), provided the least amount of institutional support to this sector. New York, with the second largest number of residents at independent institutions, led the nation in both student aid and institutional support to the independent sector (see ranking tables 2c and 3c).

State Tax Base and Budgets

There are major disparities among the states in their sources of taxable wealth. Although the typical rate of taxation in 1977 yielded $782 per capita, the state with the greatest capacity to tax, Wyoming, with $1210 per capita, had over twice the resources of the poorest state, Mississippi, with only $542 per capita. Using this representative tax system measure, the 10 wealthiest states in tax capacity were Wyoming with $1210, Nevada with $1199, Alaska with $1129, Delaware with $962, D.C. with $919, Texas with $884, Connecticut with $879, Illinois with $877, California with $869, and Colorado with $841; the 10 poorest states were Mississippi with $542, South Carolina with $605, Alabama with $605, Arkansas with $615, Maine with $645, Tennessee with $645, North Carolina with $651, Georgia with $666, South Dakota with $678, and Kentucky with $681. In recent years, the states have become acutely aware of the value of energy-related resources in determining their economic circumstances. Since this measure of tax capacity did not include mineral reserves, only extractions, the wealth of such states as Texas, Alaska, Louisiana, North Dakota, Wyoming, Colorado, and others was probably understated.

Table 4 shows the relative positions of the states in tax capacity; table 5 shows their utilization of this capacity (tax effort); and table 6 shows the resulting revenues they raise. As these rankings make clear, the states vary in both their inherent wealth and their willingness to tax. Wyoming, with the largest capacity (based on such things as combined economic strength in sales, property, income, and severance-related taxes), had a comparatively low tax effort, almost 20 percent below average; yet, because of its wealth, it still ranked fifth in overall tax revenues. Mississippi, with the lowest tax capacity, taxed at a rate close to the national average; yet it still ranks near the bottom in revenues because of its inherent lack of wealth. States highly taxed during this period included New York (62 percent above average), Massachusetts (33 percent above), the District of Columbia and California (both 20 percent above), Wisconsin and Hawaii (both 15 percent above). Table 5 provides these tax rates.

States also varied substantially in how they utilized these state revenues. The typical state budget in 1979 allowed 27 percent for elementary/secondary education, 12 percent for welfare, 11 percent for public services, 9 percent each for higher education, health and hospitals, and highways, and the remaining 22 percent was spent for a variety of other state functions. Individual states have markedly different priorities. Table 10a shows the total level of state expenditures in 1979, based on Census reports. These amounts include expenditures from state tax revenues, other state funds, and federal revenue sharing monies. Alaska spent more than any state on public functions, $4,577 per capita, while Arkansas spent the least, $1,109 per capita. Utah spent the largest share of its state budget on higher education, allocating 16 percent of its funds to this use. Delaware, Arizona, and Colorado also indicated a major emphasis on higher education, providing 14 percent. Massachusetts and the District of Columbia spent the lowest shares on higher education, only 4 percent of their budgets (see ranking table 10b). There were also important differences among the states in the budget shares allocated to elementary/secondary education. Utah, Indiana, Montana, Arizona, Texas, South Carolina, Pennsylvania, and New Jersey all allocated 30 percent or more of their funds to elementary/secondary education. At the other end of the spectrum, the District of Columbia, Hawaii, Nevada, California, New York, and Alaska assigned relatively small shares for such education (from 16 to 25 percent).

Population and Enrollments

In the United States in 1979, the average size state could have had just over 4 million people, almost 163,000 of them enrolled as full-time students. However, neither population nor enrollments were that evenly distributed. For instance, six states had over 10 million people: California had 21.9 million, New York had 17.9 million, Texas had 12.8 million, Pennsylvania had 11.8 million, Illinois had 11.2 million, and Ohio had 10.7 million. (See ranking table 11.) Thirteen states had fewer than 1 million people each, with Vermont, Alaska, and Wyoming having had fewer than 500,000 individuals per state.

California had the largest number of students in higher education, over 1 million FTE enrollments. New York was second largest, with 729,000 students. Texas, Illinois, Pennsylvania, Michigan, and Ohio also had very large student populations, between 300,000 and 500,000 each. By contrast, 14 states had enrollments below 50,000, a very small number given the average size of institutions. The largest single institution of higher education in the United States, the University of Minnesota, had over 55,000 students enrolled at a single campus.

---

[1] D. Kent Halstead, Higher Education Prices and Price Indexes: 1980 Update, *Business Officer*, Washington, D.C.: National Association of College and University Business Officers, 1980.

a. Selection of Public or Private Institutions

On average, 75 percent of students attended public institutions. In Wyoming there are no independent institutions. In eight states—Nevada, Alaska, Arizona, North Dakota, Hawaii, New Mexico, Montana, and Colorado—90 percent or more of the students were in public institutions. This high concentration of students in public institutions created a concomitant need for additional public support for higher education. In comparison, those states with greater reliance on independent institutions for the education of their populace needed less public support. (Tables 12b and 12c provide rankings of the states in public and independent enrollments.) The District of Columbia was almost entirely private in enrollment, with 88 percent of students in such institutions. Massachusetts followed closely behind, with almost 60 percent of the students (not all state residents) enrolled in independent institutions.

b. Relative Access Levels Among the States

An important enrollment indicator, provided in table 13a, shows the relative access achieved by residents of the 50 states. California led the nation in access for its residents, with the result that Californians were 30 percent more likely to attend institutions of higher education than was the average U.S. resident. Massachusetts residents ranked second in access rates (18 percent above average), an interesting finding, given that state's low level of financial support to higher education. Residents of the state clearly valued higher education, but chose either to pay for it directly in the form of tuition or to attend institutions that were often inadequately supported, in comparative terms.

In Massachusetts, New York, the District of Columbia, Rhode Island, Illinois, and Pennsylvania in particular, large numbers of state residents attended independent institutions within the state (see table 13c). In Connecticut, New Jersey, Alaska, the District of Columbia, New Hampshire, Vermont, and Delaware, large numbers of state residents chose to go out of state to attend institutions of higher education (see table 13d).

c. Public Enrollments

Arizona had the largest number of students in its public system of higher education in relative per capita terms, 48 per 1,000, followed by Washington and North Dakota with 42 per 1,000 each, California with 41.2 per 1,000, and Colorado with 40.5 per 1,000. The reasons for these enrollment rates are charted in ranking tables 14-20, which trace high school size, population, college choices of first-time students (both in and out of state), the extent to which students persisted in their education, and their relative proclivities for full- or part-time study.

d. Independent Enrollments

On average, the independent sector in a state enrolled 9.5 FTE students per 1,000 individuals in the state. A number of states far exceeded these averages, thus exhibiting a substantial emphasis on independent education. The District of Columbia led the nation, with 74.7 FTE students per 1,000 individuals. Massachusetts was second, with 30.6 students per 1,000 individuals at independent institutions (see table 24). In Massachusetts in particular, the extensive enrollment in the independent sector was a result of the large number of state residents in these institutions (15.9 FTE per 1,000 out of a total of 30.6 FTE per 1,000, over 50 percent of the total). States that drew large numbers of out-of-state students to attend their private schools included the District of Columbia, Rhode Island, Vermont, Utah, Massachusetts, and New Hampshire (see table 23).

e. Graduate Enrollments

States vary greatly in the size and structure of their higher education systems. In this variation, one component that affects the need for funding is the amount of graduate education required in the state. On average, 8 percent of public enrollments in the United States are at the graduate level. Leading the nation, Iowa, Indiana, and Kentucky had 14 percent of their students studying at the graduate level; Kansas, West Virginia, and Georgia, 13 percent, Minnesota, 12 percent, and Ohio, New Mexico, Michigan, and Alabama, 11 percent. By contrast, the District of Columbia's public system was almost entirely undergraduate, with only 2 percent of the students at the graduate level. Similarly, Alaska, New Hampshire, and Massachusetts were relatively low in graduate emphasis, with only 4 percent of public students at this level. Given the relative expensiveness of graduate level study, these ratios translate into greater or lesser needs for state and other forms of financial support. Ranking tables 25a-f chart these differences among the states, in total and by selected types of institutions.

Public Institutional Finances

At public colleges and universities, state and local appropriations are the most important source of funds, representing nearly 60 percent of the E&G revenues received by these institutions. Tuition and fees and government grants and contracts are next in importance, each accounting for 15 percent of funds. Because of the centrality of funding from these sources, rankings of the states are provided by source and class of institution in tables 26a-k, 27a-k, 28a-k, and 29a-e. Tables 43a-e show rankings of the states by percentage share contributed by major revenue sources.

a. State and Local Appropriations per Student

In 1979, the average state provided $2694 per student for public higher education institutional support. The amount of appropriations per student is a critical measure of state effort because it measures the state's contribution relative to the number of students being educated within its public system. As is evident in tables 26a-k, the states vary considerably in their support of public students, both in total and by category of institution. The District of Columbia led the nation, providing $6,639 per student, followed by Alaska, $4,230, Wyoming, $3,835, Iowa, $3,578, and Idaho, $3,564. Vermont provided the least per student, $1,627, followed by New Hampshire, $1,655, Maine, $1,953, Colorado, $1,976, and Oklahoma, $2,019. More relevant indications of public student support are provided for each category of public institution. Ranking 26b, for example, shows the relative support provided by states to public research universities that include medical programs in their curricula. New York leads the nation in this category providing $9694 for each FTE student, a level almost two-and-one-half times the national average of $4,187 for students attending similar schools. Ranking 26f shows state distribution of support for comprehensive institutions. Alaska leads the nation in this category, providing almost $8,000 per student. On average, however, states typically spend $2,423 to support students in these institutions. Rankings in state support per student for other categories of institutions are shown in ranking tables 26a-k. The averages and ranges of state support levels per student by type of institution, in fiscal year 1979 are as follows:

Categories of Institutions	U.S. Averages	High State	Low State	Ranking Table
Public, total	$2,694	DC-$6,639	VT-$1,627	26a
Research univ., medical	$4,187	NY-$9,694	OK-$2,272	26b
Research univ., nonmedical	$3,383	CA-$5,791	CO-$1,588	26c
Universities, medical	$3,380	CA-$5,791	VT-$1,792	26d
Universities, non-medical	$2,788	NY-$5,255	ME-$1,604	26e
Comprehensive	$2,423	AK-$7,964	NH-$957	26f
General baccalaureate	$2,202	TX-$5,722	KS-$945	26g
2-year academic & comprehensive	$1,789	WY-$3,314	NV-$1,026	26h
2-year occupational	$2,095	AR-$6,025	TN-$1,288	26i
Health professional	$21,631	CT-$55,239	PA-$5,835	26j
Other professional & specialized	$2,550	NC-$6,710	NH-$966	26k

b. Tuition and Fees Revenues

Tuition and fees provided a far smaller share of revenues at public institutions: 15.5 percent, as compared with 50.2 percent for independent institutions. However, for public institutions with tuition-setting authority, tuition and fees represent the key sources of revenues for budget balancing purposes. Typically, there is a trade-off between state appropriations and tuition, with the latter providing the residual operating capacity not covered by state appropriations. Although in 1979 the states collected, on average, $701 per student in tuition and fees revenues, there were substantial variations from this norm among the states. Vermont collected the largest amount from tuition, $2,112 per student. Tuition revenues for New Hampshire at $1,718, Pennsylvania at $1,426, Delaware at $1,334, and Ohio at $1,158 likewise provided an important source of funds, at levels more than 50 percent above national rates. By contrast, California relied less on tuition funds than any state, collecting only $293 per student in support. Other low tuition states included Hawaii at $395, the District of Columbia at $405, West Virginia at $411, Texas at $427, Massachusetts at $443, and Idaho at $444. Ranking table 27a provides these distributions for the public sector as a whole. Ranking tables 27b-k provide rankings of the states for specific categories of institutions. Averages, highs, and lows in tuition and fees revenues per student in FY1979 by institutional group are as follows:

Categories of Institutions	U.S. Average	High State	Low State	Ranking Table
Public, total	$ 701	VT-$2,112	CA-$293	27a
Research univ., medical	$1,104	PA-$2,188	NY-$349	27b
Research univ., nonmedical	$1,008	PA-$1,644	TX-$405	27c
University, medical	$1,160	VT-$2,615	NM-$525	27d
University, nonmedical	$ 925	NH-$2,180	MA-$261	27e
Comprehensive	$ 690	NH-$1,491	CA-$348	27f

Categories of Institutions	U.S. Average	High State	Low State	Ranking Table
General baccalaureate	$ 732	MD-$2.268	WV-$200	27g
2-year, academic & comprehensive	$ 377	PA-$830	CA-$58	27h

Health professional	$1.226	PA-$4.240	MA-$17	27j
Other professional & specialized	$ 871	NC-$2.153	MA-$413	27k

c. Total Education and General Revenues

The foregoing rankings of state appropriations and tuitions indicate the extent to which the states and particular types of institutions within the states rely on these sources for funding. The combined effect of this funding, along with support from endowments, gifts, and other sources, is reflected in total E&G revenues. These amounts, which exclude revenues from government grants and contracts, represent institutional resources available for support of general and primary operations, including functions such as instruction, academic support, student services, and administration. On average, U.S. public institutions have $3.865 per student for such operations. Alaska leads with $7.186 per student in the public sector, followed by the District of Columbia with $7.175, Wyoming with $5.625, Iowa with $5.166, and Kentucky with $4.804. However, these all-inclusive figures summary measure for the public sector are less useful than specific values for each type of institution, which provide more reflective indications of state structures of higher education. By category of institution, the averages and range values for total E&G revenues per student in FY1979 are as follows

Total E&G, Except Grants & Contracts	U.S. Average	High State	Low State	Ranking Table
Public, total	$ 3.865	AK-$7.186	OK-$2.789	28a
Research univ., medical	$ 6.678	NY-$14.254	OK-$3.617	28b
Research univ., nonmedical	$ 5.385	CA-$8.259	CO-$3.909	28c
University, medical	$ 5.402	CA-$8.636	LA-$3.306	28d
University, nonmedical	$ 4.195	WY-$6.913	TN-$2.943	28e

d. Government Grants and Contracts

Government, particularly the federal government, is the principal sponsor of research and other contracted activities at colleges and universities. Overall, these government revenues provide 14.7 percent of public institutional revenues. However at some types of public institutions, the share contributed by this source of funds is much higher, 30 to 35 percent. The level of funds provided through government grants and contracts for research and other universities only is shown in ranking tables 29a-e, on a per faculty member basis. These schools conduct the bulk of research and hence receive the majority of government grants and contracts. The figures use the headcount of 9- and 10-month faculty. If large numbers of faculty are on 11- and 12-month contracts, the numbers shown would be overstated, since these faculty members would not be counted and hence would not appear in the denominator. The averages and ranges for government grants and contracts per faculty member in FY1979 are as follows

Government Grants & Contracts per Faculty Member	U.S. Average	High State	Low State	Ranking Table
Public total	$16.954	AK-$76.022	MA-$8.525	29a
Research univ., medical	$51.370	NY-$126.465	KS-$17.351	29b
Research univ., nonmedical	$32.120	GA-$74.913	SC-$10.238	29c
University, medical	$25.620	CA-$58.527	FL-$10.303	29d
University, nonmedical	$13.706	NH-$29.508	NC-$3.041	29e

e. Instruction Expenditures

The primary function at most public institutions is teaching and educating students. Hence, relative expenditures for instruction are an important measure of institutional emphasis among the states. National averages indicate that in 1979, public institutions spent an average of $1.919 per student for direct instruction. The range of expenditures by type of institution was substantial, with health professional institutions spending the most, $14.310 per student, and 2-year academic/comprehensive institutions spending the least, $1.212 per student. Ranking tables 30a-k show these variations, by state, for each category of institution

f. Research Expenditures

On average, public institutions spent $12.022 per faculty member for research. However, public research universities (with medical programs) spent an average of $52.060 per faculty member, with one state, New York, showing $370.894 per faculty member. (This number is probably in error, because of an undercounting of faculty.) Nonmedical research universities spent $38.876 per faculty member, while non-research universities spent on average $14.821 and $9.550 per faculty member, depending on whether their institutions did or did not have medical programs. Tables 31a-e provide these rankings.

Independent Institutional Finance

Tuition and fees are the primary sources of funds for independent institutions, contributing 50 percent of their revenues. Income from government grants and contracts was next in importance and provided 19.4 percent of funds, followed by gifts providing 13.2 percent, endowments providing 6.6 percent, state and local appropriations providing 1.7 percent, and other diverse sources providing 9.2 percent. (See rankings 44a-e for state variations in these patterns.) For independent institutions, tuition, gifts, and endowments are the key sources of funds that support general operations.

a. State and Local Appropriations

State and local appropriations are a very minor source of financial support for private institutions and usually are provided to assist specific numbers of state residents enrolled in particular programs such as medical school, veterinary medicine, and nursing. Only 22 states receive such support, with Texas leading the nation at $281 per student. As previously indicated, Massachusetts provides the least amount, $2 per student, a level far below the average of $101 per student. (See ranking table 32).

b. Tuition Revenues

The average U.S. private institution collected $3.085 per student in tuition and fees revenues, but the range spanned from a high of $4.552 in Alaska to a low of $988 in Utah. Table 33 shows the variations by state.

c. Total E&G Revenues

The key concern of all institutions is the total amount of operating funds. As indicated in the preceding tables, the average public institution functioned with $3.865 per student. The average private institution functioned with $4.964 per student, an amount almost 30 percent more than that of public institutions. However, these averages obscure differences in the numbers and types of institutions that exist in the public and independent sectors. For instance, in the public sector, there are far more 2-year and comprehensive institutions with concomitant numbers of students enrolled in them. For the independents, baccalaureate schools are more numerous and represent a substantial share of private sector enrollments. Universities are a key component of each sector. Tables 34a-k provide rankings of the states for different categories of independent institutions in terms of total E&G revenues per student, excluding funds from government grants and contracts. Independent institutions show the following averages and distributions in total E&G revenues per student in FY1979

E&G Revenues per Student, Excluding Grants & Contracts	U.S. Average	High State	Low State	Ranking Table
Independent, total	$ 4.964	AK-$15.783	NV-$2.104	34a
Research univ., medical	$ 9.684	MD-$16.397	DC-$4.989	34b
Research univ., nonmedical	$12.200	CA-$14.868	PA-$8.799	34c

Health professional	$22.056	MN-$54.171	MO-$22.056	34j
Other professional & specialized	$ 3.959	AK-$51.741	ND-$3.959	34k

d. Government Grants and Contracts

The typical private institution received $26.452 per faculty member in government grants and contracts. The range of this support, however, varied tremendously by state, with private institutions in Maryland receiving $75.693 per faculty member and those in Utah receiving $545 per faculty member. There was also substantial variation among types of institutions. Research universities with medical programs received on average $94,161 per faculty member; those without medical, $95,376 per faculty member; universities with medical programs received $29,678 per faculty member; those without medical, $14,688 per faculty member (see rankings 35a-e).

e. Instruction Expenditures

Independent institutions, like public institutions, showed parallel variations in instructional expenditures by type of institution. On average, private institutions spent $2,243 per student on instruction. These expenditures varied from an average high of $5,202 for research universities with medical programs to an average low of $811 per student for 2-year occupational program institutions. Rankings 36a-k show these distributions by type of institution.

f. Research Expenditures

On average, independent institutions spent $16,284 per faculty member in research. For some states, such values were unusually high; e.g., California, with a value of almost $2.5 million per faculty member for research universities, a number clearly in error because of the prevalence of 11- and 12-month faculty members *not* included in these measures. (See rankings 37a-g for state differences.)

Recent Trends

a. State and Local Appropriations

Between 1975 and 1979, state and local appropriations averaged increases of 47.7 percent for public institutions and almost 30 percent for independent institutions. During this period, appropriations for public institutions increased in all states. Increases in state and local appropriations between FY1975 and FY1979 by type of institution were as follows:

	Average Increase	Ranking Table
All public	47.7%	38a
Research university, medical	49.1	38b
Research university, nonmedical	47.9	38c
University, medical	51.7	38d
University, nonmedical	43.0	38e
Comprehensive	40.9	38f
Baccalaureate	47.7	38g
2-year, academic and comprehensive	44.6	38h
2-year, occupational	63.8	38i
Health professional	81.9	38j
Other professional and specialized	29.7	38k
All independent	29.8	38l

b. Enrollments

Public enrollments during this 1975 to 1979 period increased by 6.0 percent on average. The largest rates of public enrollment growth were in Alaska at 75.1 percent, Arkansas at 26.3 percent, South Carolina at 20.6 percent, Delaware at 19.9 percent, and Virginia at 18.2 percent, creating the need for additional state support. Six states experienced declines in public FTE enrollment: Nevada at 7.5 percent, New York at 6.4 percent, Connecticut at 4.4 percent, Maine at 2.9 percent, California at 2.3 percent, and Oregon at 1.4 percent. Independent institution enrollments increased in this period by a larger gain than did public enrollments, 11.7 percent versus 6.0 percent. All but five states shared in these gains in the independent sector. Enrollment decreases in the private sector occurred in Alaska with 62.7 percent, Delaware at 5.1 percent, West Virginia and Colorado with 1.1 percent, and the District of Columbia with .4 percent. Again, changes in enrollment varied by type of institution. The following patterns occurred in this period:

	Percent Change in Enrollments 1975-1979	Ranking Table
Total public	6.0	39a
Research university, medical	3.1	39b
Research university, nonmedical	4.0	39c
University, medical	5.4	39d
University, nonmedical	−.2	39e
Comprehensive	3.9	39f
Baccalaureate	8.3	39g
2-year, academic and comprehensive	7.6	39h
2-year, occupational	22.8	39i
Health professional	28.2	39j
Other professional and specialized	6.1	39k
Total independent	11.7	39l

c. Constant Dollar Revenues per Student

- *Appropriations.* Overall, between 1975 and 1979, public institutions experienced a 6.6 percent growth in the real dollar value of their appropriations, even after adjustment for enrollment gains. Given the importance of state funding to public institutions, these gains are significant. Fifteen states, however, did not share in this expansion: Alaska, Illinois, Maine, Florida, Pennsylvania, New York, North Carolina, Louisiana, Delaware, Vermont, New Hampshire, Rhode Island, Colorado, Arkansas, and Massachusetts. States leading the nation in constant dollar public support include Nevada with 46.4 percent, Wyoming with 36.9 percent, Utah with 35.7 percent, Alabama with 34.3 percent, and New Mexico with 31.9 percent.

  The average value of state funding to the independent sector declined by 11.5 percent during this period, largely because of substantial decreases in six states. The decline was greatest in New York, where the purchasing power of state funding in the independent sector fell 26.7 percent per student. Substantial decreases were also evident in Florida, New Jersey, Michigan, Pennsylvania, and Alabama. (See rankings 40a and b.)
- *Tuition and Fees.* Between 1975 and 1979, the real value of tuition and fees per student increased at a greater rate than that of inflation, up 3.1 percent for the public sector and 5.5 percent for the private. Given the heavy reliance of independent institutions on tuition, these gains were particularly important. As indicated in ranking 41b, the independent sector made real gains in tuition in 36 states, held nearly steady in 6 others, and experienced declines in only 8 states. For public institutions, real dollar losses in tuition were more prevalent, despite the overall gains nationally. Only 23 states shared in tuition improvements. Arizona led the nation in its tuition surge, with real dollar gains per student of 48 percent. By contrast, Alaska had a loss of nearly similar magnitude, 42.6 percent.
- *E&G Revenues.* The net effect of revenue changes in the public and private sectors created an overall improvement in the funds available for higher education, even after enrollment changes and inflation adjustments. Net revenues grew by 6.3 percent in the public sector and by a lesser amount of 3.2 percent in the private sector. As is evident, public sector gains were largely fueled by state appropriations, aided to a lesser extent by tuition, while gains in the independent sector were largely tuition based. These gains in funds were evident in two-thirds of the states, in both the public and private sectors. Still, losses in one or both sectors were experienced in nearly 13 states. Indiana in particular suffered a serious loss in its public-sector purchasing power, which fell 10 percent on a per student basis. Examples of other states whose public sectors faced hard times due to losses included: Florida, 7.4 percent; Alaska, 7 percent; North Carolina, 6.4 percent; Illinois, 3.2 percent; Rhode Island, 2.3 percent; Pennsylvania, 2.2 percent; and Massachusetts, 2.2 percent. Gains and losses in the states are shown in rankings 42a (public) and 42b (independent).

Importance of Different Revenue Sources

There are major differences between the states and between the public and private sectors in their means of financing higher education. For public institutions, state and local appropriations provided the lion's share of funds, representing nearly 60 percent of all revenues. Tuition was next in importance, accounting for 15.5 percent of revenues, followed by government grants and contracts at 14.7 percent. These three sources furnished 90 percent of the E&G funds allocated to public higher education. For the independent sector, tuition carried the major load, 50 percent; government grants and contracts contributed 19.4 percent; gifts, 13.2 percent; and endowment income, 6.6 percent.

There were, however, major variations among the states in their reliance on these sources. For example, the District of Columbia received 78 percent of its funds from local sources, followed by: Massachusetts, 69.9 percent; California, 69 percent; South Carolina, 66.1 percent; New York, 65.4 percent; and Idaho, 65 percent. These states/localities assumed an unusually large role in the financing of public higher education. At the other end of the spectrum were states like Vermont, whose state and local sources provided 26.7 percent; New Hampshire, 36 percent; Delaware, 40.1 percent; Colorado, 42.0 percent; Alaska, 42.3 percent; and Maine, 42.8 percent. These states carried far smaller shares than the 60 percent load that was typical of the other states. To compensate to some degree, each of these states, except Alaska, collected large shares of their revenues from tuition (more than 20 percent) and ranked among the top 10 in the country in their reliance on tuition as a source of funds.

Independent institutions showed an even greater degree of variability in reliance on tuition, ranging from a high in Delaware of 79 percent to a low in Alaska, where tuition provided 24 percent of revenues (see ranking table 44b).

Tables 43a-e provide rankings of the states for public institutional reliance on various funding sources. Comparable data for private institutions appear in rankings 44a-f.

Faculty Salaries

At every rank and the all-ranks average, faculty at public institutions in Alaska were the best paid. However, the well-known high cost of living for Alaskans was not factored in these salary levels, thereby obscuring whether these were real or cost-of-living differences. For the all-ranks average, Alaska was followed by the District of Columbia, California, New York, Connecticut, Arizona, and Michigan. Faculty at public institutions in Alaska likewise showed the greatest rates of increase in salaries between 1975 and 1979, gaining 73.8 percent. Faculty in public institutions in Connecticut were next, with salary gains of 43.2 percent for the period. Other states that showed recent gains include North Dakota with 41.4 percent, Wyoming with 40.3 percent, and Utah with 38.4 percent. At the other end of the spectrum, faculty in the Massachusetts public sector showed only a 12.1 percent gain, those in Maine 19.7 percent, in Florida 20.2 percent, and in California 24.4 percent. Tables 45a-e provide public-sector rankings by state for average salaries and percentage changes in salaries.

In the independent sector, Massachusetts faculty led the nation in all ranks of salary (13 percent above average), and in pay to full professors (17 percent above average). Private faculty salaries improved most in Hawaii by 54.9 percent, followed by Arkansas at 51.4 percent, Utah at 46.3 percent, Vermont at 45.7 percent, and Idaho at 45.5 percent. Tables 46a-e provide these figures for independent institutions by state.

The remainder of this chapter presents State rankings for the major index measures in this study.

CHAPTER 3: STATE BY STATE REPORTS

Comparisons of funding patterns for all 50 states, the District of Columbia, as well as the U.S. average are described in this chapter. The state profiles, treated in alphabetical order, are the central focus of this study. The state profiles follow the summary of general patterns and trends for the nation.

U.S. AVERAGE

Recent Trends

Between 1975 and 1979, state and local funding for higher education showed real dollar gains in per student support. For public institutions, state appropriations grew by 47.7 percent, which, after adjustment for a 6 percent increase in public enrollments, meant a 5.6 percent constant dollar gain in per student support. The number of students funded by these monies, however, decreased. In 1975, there were 38.8 FTE students in public and independent institutions for every 1,000 individuals in the population. By fall 1978, this level had declined to 38.4 FTE students per 1,000 individuals, representing a relative decline in national rates of enrollment in postsecondary education. One influencing factor in this shift was a 4 percent decrease in the relative number of high school graduates.

Tuition revenues also grew in value between 1975 and 1979, by 3.1 percent. The combined gain in state appropriations and tuition contributed to the 6.3 percent expansion in the constant dollar value of revenues per student in the public sector.

State Financing of Higher Education

In 1979, state and local government support for higher education averaged $87 per capita. Ninety-one percent of these funds were allocated to institutions in the form of general support. Four percent went for state student aid. The last 5 percent was channeled indirectly to higher education as support for state higher education boards and commissions and other functions, including fringe benefits and tuition reciprocity arrangements. Ninety-five percent of state funds for higher education went to public institutions, 3 percent to independent institutions, with the remaining portions not identified by sector.

State Tax Base and Budget

In 1977, the states and localities collectively raised $782 per capita in tax revenues. The largest single source of tax revenues in the states is general sales, which provided 21.5 percent of tax revenues. The next largest source is residential property taxes, which accounted for 18 percent of tax funds. Individual state income taxes yielded 17.3 percent of state tax revenues, followed by selective sales and gross receipts at 13.2 percent, and commercial and industrial property taxes also at 13.2 percent. These five tax categories provided 83 percent of state and local tax revenues.

Census Bureau data on the distribution of these funds indicated that in 1979 elementary/secondary education received the largest single share at 27 percent, followed by public welfare at 12 percent, and public services at 11 percent. Higher education, highways, and health and hospitals each received 9 percent. The remaining funds were used for a variety of other state needs. A comparison of these 1979 state spending patterns with those of 1975 indicates that health and hospitals and public services were increasing their share of state budgets, whereas elementary/secondary education and highways were receiving less. Higher education's share at 9 percent held constant over the period.

Higher Education Enrollments

Three-quarters of the 8.3 million FTE students in this country attended public institutions of higher education. Thirty percent of all students attended universities, 29 percent attended 2-year institutions, 25 percent attended comprehensive masters-granting institutions, and 11 percent attended baccalaureate colleges. The remaining students enrolled at specialized institutions. Largely because of decreases in the relative numbers of high school graduates, first-time and total enrollments rose more slowly than did increases in the population. A higher rate of entrance to higher education institutions and better retention rates compensated for this relative decline, thus softening an otherwise greater drop in enrollments.

Most students attended college in their own state, 76 percent of them going to public institutions and 18 percent to private institutions. Only 6 percent of students went out of state for higher education. As a result, at independent institutions, on average, 60 percent of the students were residents of that state.

Institutional Finances and Characteristics

Public and independent institutions finance their activities in very different ways. At public institutions, state and local appropriations supply the major share of funds, providing 60 percent of all educational and general revenues. The importance of state and local funds at public institutions grew slightly between 1975 and 1979, from 59 percent to 60 percent of all E&G funds. By contrast, independent institutions received only 2 percent of their funds from state and local sources. Private institutions instead relied primarily on tuition for their funds, and between 1975 and 1979, the role of tuition increased from 48 to 50 percent of the total. These institutions received 13 percent of revenues from private gifts and grants, and 7 percent from endowment income. Public institutions received only 19 percent of funds from these sources (15 percent from tuition and 4 percent from private gifts and endowments). Government grants and contracts are roughly similar in importance at public and private institutions, representing 15 percent and 19 percent of respective E&G revenues.

Public institutions spent a greater share of their funds on instruction and public service than did private institutions—44 percent and 5 percent versus 37 percent and 2 percent. Independent institutions spend larger shares on institutional support activities—41 percent versus 31 percent.

Between 1975 and 1979, public institutions showed real dollar gains per student of 6.3 percent in E&G revenues, while independent institutions experienced a lesser though still real gain of 3.2 percent. For public institutions, this gain was largely due to increases in state funding, though tuition revenues per student also increased faster than the rate of inflation, by 2.5 percent. For the independent sector, relative gains in tuition of 5.5 percent were responsible for moving total revenues ahead of inflation by 3.2 percent, even in the face of a large 11.7 percent gain in enrollment. Public sector enrollments grew more slowly at 6 percent.

By sector, universities generally fared much better than other classes of institutions, with real gains against inflation ranging between 7 and 13 percent. Health professional institutions also moved ahead, by 12.1 percent in the public sector and by 6.5 percent in the private sector. Independent, occupationally oriented 2-year institutions were the only class of institutions that did not keep up with enrollments and inflation in this period, showing a real dollar loss of 5 percent in per student revenues. In general, however, the 2-year sector increased revenues by 1 to 3 percent. The general baccalaureates also showed small gains against inflation, as did comprehensive institutions.

On average, public institutions were three-and-one-half times larger than private institutions and had a greater emphasis on lower division studies in their instructional activities. Private institutions were smaller, enrolling 1235 students on average (compared to 4266 for public institutions) and focused more on the graduate level (19 percent of their students were at the graduate level in contrast to 8 percent in the public sector). Faculty generally were better paid at public institutions though there were important variations by both sector and rank. For example, professors at private universities were better paid than their counterparts in the public sector. During this period, faculty salaries grew 28 percent in both sectors. The Consumer Price Index, however, increased by 34.9 percent in this same time period.

ALABAMA

Recent Trends

Alabama led the nation in its rate of increase in state and local appropriations per capita to public institutions. Between 1975 and 1979, appropriations per capita doubled in the state, moving Alabama up from 22nd among the states to 12th. Alabama spent $106 per capita for higher education, 22 percent above average. This level of support for higher education is most notable in light of Alabama's low tax base. Alabama collects less in taxes than any other state, netting $480 per capita in contrast to a national average of $782 per capita. As a result, the state operates its public services with nearly 40 percent fewer funds than other states.

Although Alabama provides 22 percent greater funding to higher education than average, these funds support a larger than average number of students in the public sector. In addition, these students are enrolled in relatively more expensive types of institutions. Alabama educates 31.5 FTE students per 1000 persons in its public institutions, 9 percent more than is typical. These students are registered in larger numbers at universities and comprehensive institutions than is typical, and, to a much lesser degree, in 2-year institutions (25.7 percent, versus a national average of 36.4 percent). The result is a dilution of relatively generous state support, causing Alabama to shift from an above average ranking for per capita support to an average position in per student terms.

State Financing of Higher Education

As indicated, Alabama spends $106 per capita for higher education. Most of these funds (98 percent) support the public sector. Eighty-four percent is distributed directly to institutions as general appropriations; 1 percent is allocated for student aid, while 14 percent (an unusually large portion) supports higher education in other ways (mostly in vocational-technical education). This distribution substantially reduces the total amount of general support received by public institutions, although it is still 14 percent above the national average.

State Tax Base and Budget

Alabama's capacity to raise tax revenues is among the lowest of the states, at $605 per capita, indexed at 77. All of the major types of taxes (e.g., sales, income) exhibit substantially below average capacity. Compounding this low inherent wealth, Alabama exerts a very modest tax effort, resulting in tax revenues of $480 per capita, a level 40 percent below the national average; it is the smallest pool of public funds of any state. Alabama relies heavily on sales taxes for revenue, and, by contrast, makes almost no use of property taxes. In 1977 Alabama showed a loss of $413 million in potential property tax revenues, had property in this state been taxed at national rates.

Apparently higher education is not affected by this reduced tax base and is accorded a relatively large share of the state budget. Census data (which include both tax revenues and Federal revenue sharing funds) indicate that 12 percent of the state's budget is spent for higher education, a level substantially above the average U.S. level of 9 percent. (Since 1975, however, higher education in Alabama has seen its share of the state's budget fall from 13 percent to 12 percent.) Health and hospitals with 13 percent, and highways with 11 percent are also comparatively well funded in Alabama—at the expense of public welfare, public services, and general state functions, each of which receives about 20 percent less than the average national share. Funding for elementary/secondary education in Alabama has shown major improvements since 1974, going from a state share that was 10 percent below average to one that is now 4 percent above. As a favored state function, higher education receives such a high percentage (22 percent) of the exceptionally low tax revenues that the resulting appropriation of $106 per capita is well above the national average, an indication of state priority.

Higher Education Enrollments

Although fewer residents of Alabama attend higher education anywhere (88 percent of the national rate), the public sector serves a typical number of state residents: 25 per 1000 capita. However, only half the normal number of state residents enroll in private institutions—in-state or out-of-state—thus reducing total rates of postsecondary attendance to 12 percent below average. Total enrollment at public institutions, however, is 13 percent above average because of resident enrollment, substantial migration of students from other states (at twice the normal level), and more full-time rates of attendance by students. In general, Alabama students are more likely to attend public university and comprehensive institutions than public 2-year institutions, a situation that creates a relatively more expensive system to operate. Students attending independent institutions, on the other hand, are concentrated in comprehensive and general baccalaureate institutions.

Institutional Finance and Characteristics

Alabama operates 36 public institutions of higher education: 3 universities, 10 comprehensive, 3 baccalaureate, and 20 2-year institutions. Research and other universities and comprehensive institutions operate with funding above or close to national levels. Their revenues are further supplemented with above average government grants and contracts. The baccalaureate and 2-year schools, however, function with funds between 20 and 30 percent below typical levels, largely because of lower-than-average state support and low tuition charges.

These overall rates of support to public institutions in Alabama are heavily influenced by recent improvements in state and local funding, which increased 34 percent per student in real dollar terms. In 1975, state funds provided 49 percent of all revenues received by public institutions. Four years later this share grew to 59 percent.

Tuition levels lagged far behind inflation, decreasing in constant dollar terms by 7.5 percent. The net effect is that overall revenues grew by 18.2 percent in real dollar terms per student in the public sector. By contrast, private sector funding declined 7.2 percent in constant dollars.

Despite recent public sector improvements in overall funding, faculty salaries continue to lag behind national levels. For the public sector as a whole, they trail by 10 percent, with some of those sectors behind by as much as 15 percent.

Alabama's institutions, in general, are smaller in size and more graduate oriented, a costly combination to support.

Data Notes

1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state-funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here.

Postsecondary vocational technical education	$	32,975,521	13,623 (FTE Students)
State boards and commissions	$	1,007,000	
Retirement benefits (including social security)	$	19,656,000	(estimated)
Fringe benefits	$		
Interstate contracts and reciprocity payments	$	124,084	
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$		
Centrally administered capital/debt service	$		
Other	$		

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$	337,580
Current Funds revenues dedicated to capital purposes:		
—tuition and fees	$	unknown
—auxiliary enterprises	$	unknown
—other	$	unknown

Tuition and Fees reappropriated by the state (yes or no) No

Other Comments

ALASKA

Recent Trends

State and local appropriations to higher education increased by 47.6 percent in Alaska between 1975 and 1979, equivalent to national rates. However, enrollments took such a large jump, 75.1 percent, in this period that constant dollar state support per student declined by 35 percent. At the same time, overall revenues fell victim to inflation. Thus, between inflation and enrollment growth, there was a 7 percent drop in purchasing power per student.

Assessment of the impact of these changes on the status of institutional finances is complicated by the fact that price levels in Alaska cannot be compared with price levels elsewhere. For example, public institutions in Alaska operate with nearly twice the typical amount of funds per student. But, how much of this is a price factor and how much, if any, is a benefit is not discernible.

State Financing of Higher Education

Alaska spends $155 per capita for higher education, a level 78 percent above national rates. Over 80 percent of this support is funneled directly to public institutions in the form of appropriations, with most of the remainder taking the form of indirect assistance to higher education. A small amount of student aid is provided directly by the state, but there is no evidence of financial aid to the independent sector.

State Tax Base and Budget

Alaska raises 54 percent more tax revenues than the typical state because of strong inherent wealth and a somewhat greater tax effort. Alaska has 44 percent greater tax capacity than do most states. This is evident in many tax categories: e.g., severance taxes (index 899), individual and corporate incomes (indexes 193 and 205 respectively), and resident and industrial properties (indexes 132 and 160). The state makes the most use of its capacity in the area of individual income, obtaining over 40 percent of its revenues from this source alone. According to the Census Bureau, Alaska spends a total of $4577 per capita in state funds, three times the national level. Alaska's spending priorities are most evident for elementary/secondary education, highways, public services, and other miscellaneous categories. Only 6 percent of its funds are allotted to higher education, a rate 30 percent below average. Still, because of the size of the state's tax base, higher education receives funding that is almost 80 percent above the national level.

Higher Education Enrollments

Alaska residents attend higher education at rates comparable to national rates. This is the result of both significant attendance records at in-state public institutions and migration to other states (at two-and-one-half times the national rate). Levels of enrollment (index 102) at public in-state institutions are somewhat above the national average index because of a high entrance rate of new students and a significant in-migration of students from other states. These levels of enrollment represent a major improvement over prior years (e.g., 1975) when public enrollment was almost 40 percent below national rates. Very few Alaskans attend independent institutions within the state. The majority of students in the state enroll in either the two comprehensive institutions or the nine 2-year institutions. In absolute terms, the actual number of students in public institutions is very small: 12,000 FTE in total.

Institutional Finances and Characteristics

Despite the drop in the real dollar value of revenues noted above, Alaska institutions appear by national standards to be well funded. Public institutions in the state operate with revenues that exceed national levels by 50 percent or more. At the comprehensive institutions particularly, funding is almost 4 times national rates, averaging nearly $12,500 per student. In addition, Alaska receives an exceptional number of government research grants, a further contribution to their funding base. Yet, despite substantial research activity at these schools—more than seven times the national rate—graduate enrollments at the comprehensive institutions are only slightly higher than the national average.

Institutions in Alaska are exceptionally small, usually enrolling only 1,000 students, one-fourth the norm. Faculty salaries in Alaska's public sector are almost 50 percent above the national average, having increased at more than twice the national rate over the past 4 years (1975-1979).

Data Notes

1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state-funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here

Postsecondary vocational technical education	$ 2,581,800	(305 FTE Students)
State boards and commissions	$ 9,384,700	
Retirement benefits (including social security)	$	
Fringe benefits	$	
Interstate contracts and reciprocity payments	$	
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$	
Centrally administered capital/debt service	$	
Other	$	

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data

Debt service that is part of state and local appropriations to public institutions in the state	$
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$
—auxiliary enterprises	$
—other	$
Tuition and Fees reappropriated by the state (yes or no)	Yes

Other Comments

ARIZONA

Recent Trends

Gains in state and local appropriations to public institutions outpaced both inflation and enrollment growth in Arizona. The 50.2 percent increase in state funding created a 13.7 percent real dollar gain in finances, even with a 1.1 percent increase in enrollments. Coupled with a 48 percent advance in constant dollar tuition revenues, Arizona institutions experienced a 15.9 percent constant dollar increase in their total E&G revenues per student. As a result, Arizona is among the 35 states achieving real dollar gains in state support per student.

State Financing of Higher Education

Arizona spends $118 per capita for higher education, a level 36 percent above the national average. These funds are being spent in the public sector, almost entirely in the form of direct institutional appropriations. There is no state student aid program in Arizona.

State Tax Base and Budget

Arizona ranks 34th nationally in tax capacity. However, through a substantial tax effort, Arizona raises taxes to a level 3 percent above the national average, resulting in $802 per capita for public purposes in 1977. Arizona raises 66 percent of these taxes through above average general sales taxes, and residential and commercial/industrial property taxes.

In Arizona's budget, higher education, elementary/secondary education, highways, and public services receive above average shares of the state pie. Higher education in particular is favored, receiving 14 percent of the state's budget, a level 56 percent above the national average. By contrast, public welfare and health and hospitals receive shares of the state budget that are very low by national standards.

Higher Education Enrollments

Arizona residents achieve very high rates of access to higher education, ranking third in the nation. Thirty-nine of every 1000 persons in the state enroll. In fact, public institutions of higher education enroll 44 percent more state residents than is typical. Very few Arizonans attend independent institutions in the state and only an average number of Arizonans migrate to other states for postsecondary education.

In total, Arizona's public institutions of higher education enroll 66 percent more students than the average, 48 FTE students for every 1,000 persons in the state, more students per capita than any other state. The entrance rate for first-time students is twice the national average, and there is a very substantial in-migration of students from other states (second only to Alaska). However, students in Arizona more often attend higher education on a part-time basis and for shorter durations than do students in other states, thus lessening somewhat the strong enrollment demand.

Far more students enroll in research and doctoral institutions in Arizona than the national pattern indicates. Almost half of the state's public students are in universities, in contrast to the national average of 31 percent. Similarly, Arizona places more emphasis on 2-year institutions, and 43 percent of their students enroll in this sector, in contrast to the more typical 36.5 percent enrolled in other states. Ten percent of Arizona's students enroll in comprehensive institutions, but the majority of students enroll in one of two main sectors: the university or the 2-year institutions.

Institutional Finances and Characteristics

In 1979, per student revenues at these public institutions were at or below the national average for similar institutions. The research university, the University of Arizona, was funded at nationally comparable levels. The university with no medical program, Arizona State University, received approximately 20 percent less funding from the state and had 13 percent less funding overall than similar institutions in this category. The large 2-year sector in Arizona, represented by 13 institutions, received approximately 8 percent less per student from the state than was typical, and overall had revenues 9 precent less than the norm. The single 2-year occupational institution in the state operates with approximately 30 percent less funding than the national average.

The two universities spend less on instruction and research and more on public service than is typical of such institutions. The University of Arizona, with over 22,000 students, is similar in size to other institutions in this category. Arizona State with 28,000 students is twice the size of similar institutions. The University of Arizona is more graduate in its focus (22 percent of its students study at this level) in contrast to Arizona State, which enrolls about 20 percent fewer students at this level than is typical of such schools.

Faculty salaries in Arizona are above national levels, having improved markedly between 1975 and 1979, particularly for the upper ranks.

Data Notes
1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state-funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here.

Postsecondary vocational technical education	$
State boards and commissions	$ 935,548
Retirement benefits (including social security)	$
Fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$ 5,573,481
—auxiliary enterprises	$ 2,198,812
—other	$
Tuition and Fees reappropriated by the state (yes or no)	No

ARKANSAS

Recent Trends

The substantial increase of 63 percent in state and local funding for public higher education in Arkansas was more than consumed by an enrollment growth of 26.3 percent and inflation. As a consequence, Arkansas' public institutions lost 1.3 percent of their state funded purchasing power between 1975 and 1979. Decreases were particularly evident in the university sector (the University of Arkansas' main campus), which enrolls almost 30 percent of the state's public students. This institution experienced a 14.7 percent decline in real dollar state funding and a 15.9 percent decline in constant dollar tuition revenues, which, with the changes in other revenue categories, created an overall 14.8 percent decrease in constant dollar E&G funding per student. The largest sector, the comprehensive institutions, experienced a substantial gain in buying power, with E&G revenues, which were adjusted for inflation, increasing by 8.2 percent per student. The baccalaureate institutions made small gains against inflation and enrollment changes. Patterns in the other sectors were mixed.

State Financing of Higher Education

Arkansas spent $67 per capita for higher education, a level almost 25 percent below that of other states. The bulk of this funding was provided to the public sector in the form of direct institutional appropriations. A small portion, 1 percent, was provided in state student aid, support that was much lower than average. Although state funding for higher education was low, enrollments were also below average. This combination created a level of state support per student that was 5 percent above the national average.

State Tax Base and Budget

Arkansas is a relatively poor state, ranking 48th nationally. Therefore, despite a high allocation of tax revenues to higher education, its overall appropriations level of $67 per capita is nearly 25 percent below the typical U.S. rate of support. Arkansas' tax capacity is below average in almost every category, but particularly so in important ones such as general sales (index 88), residential property (index 62), and individual income (index 63). Arkansas exacerbates this condition with a low tax effort, with the result that theirs is the second lowest tax base in the country. As a consequence, publicly supported activities in Arkansas draw on a state pool of funds, $484 per capita, that is nearly 40 percent below average. This level of funds contrasts sharply with the 1979 national level of $782 per capita.

Unlike other states' typical spending patterns, Arkansas allocates a larger share of its budget to highways, higher education, health and hospitals, public welfare, and elementary/secondary education. Only public services and other miscellaneous categories receive lower priorities. The most notable condition in Arkansas still remains the relatively small size of the state budget—a budget 25 percent smaller than those of other states. Larger-than-average shares of this budget still translate into low levels of funding support.

Higher Education Enrollments

Despite Arkansas' substantial growth in enrollments in higher education between 1975 and 1979, the rate of 24 FTE students per 1,000 capita was still 27 percent below national rates. Only two states have lower enrollments (D.C. and West Virginia). Twenty of the 24 residents per 1,000 capita who pursue higher education attended public institutions. The number of Arkansas residents attending independent institutions in state or out of state was one-half the national average.

These comparatively low rates of attendance were reflected in the enrollment levels in Arkansas' public sector (including residents and nonresidents). There were 23 FTE students per 1,000 capita, a level 20 percent below national rates. This below-average enrollment was primarily related to the lower entrance rate of first-time resident students (46 percent vs. a national rate of 61 percent). It was offset only in part by a greater tendency toward full-time study in the state (12 percent more so than the norm).

Eighty-four percent of the students in the state are in public institutions, thus identifying Arkansas as a state with a primarily public-sector focus. The institutional structure in the state provides an unusually heavy emphasis on the comprehensive (39 percent) and general baccalaureate sectors (16.5 percent), and a relatively light focus on 2-year education (14 percent of enrollment compared to national rates of 36 percent). Fewer students enroll at universities (28 percent) than is typical (31 percent).

Institutional Finances and Characteristics

Public institutions in Arkansas show a mixed funding profile, with research and baccalaureate institutions operating at levels close to the national average (indexed at 96 and 99 respectively). The comprehensive sector, which is the largest in the state, operates with almost 20 percent less funding than is typical for such institutions.

Despite the large increase in state funding between 1975 and 1979 (63 percent), enrollment growth of 26 percent, coupled with inflation, eroded these increases, causing constant dollar revenues per student to fall by nearly 2 percent in the public sector. Arkansas' expenditure patterns vary by sector, though in general, instruction expenditures are substantially below national levels. Research operates somewhat above the national average, and public service receives major emphasis in the higher education system. Support functions (academic and other) operate with below average funds in both the university and comprehensive sectors, but appear well supported in other sectors.

Faculty salaries in general were about 17 percent below national levels at each rank, despite increases in the upper ranks that were generally ahead of national rates (except at the university).

Arkansas' public institutions in general were smaller than usual, and therefore are probably somewhat more expensive to operate. Also, because the university was more graduate in its orientation (18 percent graduate) than similar schools elsewhere, one can assume additional funding requirements. The comprehensive sector being less graduate in focus (6 percent of enrollments) created the opposite effect—lesser funding needs.

Data Notes

1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state-funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here.

Postsecondary vocational technical education	$
State boards and commissions	$ 684,051
Retirement benefits (including social security)	$
Fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 7,910,100
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$ not available
—auxiliary enterprises	$ not available
—other	$
Tuition and Fees reappropriated by the state (yes or no)	No

Other Comments

It should be noted that some state colleges and universities in Arkansas allocate all staff benefits expenditures to institutional support causing an overestimate of that category and an underestimate of instruction, academic support and research expenditures.

The University of Arkansas - Fayetteville, classified in the Research University without medical category, reports financial data for six other organizational entities in addition to the main campus, most of which do not have any enrollment. These other entities are the system administration for the entire University of Arkansas system, the Agricultural Experiment Station, the Graduate Institute of Technology, the Cooperative Extension Service, the Arkansas Archeological Survey, and the Industrial Research and Extension Service. The inclusion of these units causes the per student figures for the main campus at Fayetteville to be larger than would otherwise be the case.

Source: Arkansas Department of Higher Education

CALIFORNIA

Recent Trends

State and local appropriations to public higher education in California increased by 45.6 percent between 1975 and 1979, a rate that nearly paralleled the U.S. average. While appropriations were growing at typical rates, California experienced a loss in FTE enrollments in the public sector; it was one of six states to face such losses. Enrollments in this high access state decreased by 2.3 percent in a period when enrollments were growing by 6 percent throughout most of the country. As a result of this decline in the number of students, higher education in the state was able to make major gains against inflation. Revenues per student grew in real dollar terms by 13.4 percent in the public sector. These revenue improvements were largely state-financed, with a 14.1 percent constant dollar gain per student, and they were sufficient to outweigh an average 1.3 percent loss in constant dollar tuition and fee revenues per student. All sectors of public institutions experienced these gains, except the University of California-San Francisco, the health professional institution. And despite their purchasing power losses, the level of revenues per student in this sector was just below the U.S. average for such institutions.

State Financing of Higher Education

California ranked fourth in the country in its funding of higher education. On average, each citizen of the state provided $128 to support higher education, a rate 47 percent above average. Ninety-seven percent of these funds was channeled directly to the public sector, with 94 percent distributed through direct appropriations to the institutions. Three percent was channeled to students in the form of student aid and 3 percent provided other indirect support to higher education. California was among the states that provided student aid to students attending independent institutions.

State Tax Base and Budget

California is one of the wealthiest states in the nation, ranking ninth among the states. Its tax capacity, 11 percent above the norm, is heavily centered in the traditional tax sources: general sales, residential property, and individual income. The state used this capacity to a substantial degree, making the third largest effort to collect taxes. As a consequence of inherent wealth and high tax effort, the state raised $1040 per capita in tax revenues—the national average was $782—providing the state with funds 33 percent greater than the typical pool.

California allocated an above average share of state revenues to higher education: 10 percent of its total state budget (from all sources including Federal revenue sharing funds) and 12 percent of its tax derived budget. Other state priorities were evident in the shares accorded public welfare and public services. On the other hand, state emphasis declined in elementary/secondary education, highways, and other miscellaneous services. Support for health and hospitals, although receiving a somewhat smaller share of the state budget than was typical, maintained a constant slice of state pie during this period.

Higher Education Enrollments

California has the largest population in the nation and enrolls more students in higher education than any other state. In 1979, 43 of every 1,000 Californians attended postsecondary education, a rate 30 percent above the U.S. average of 33 per 1,000. This high rate of access was due primarily to the state's public system, which enrolled 50 percent more residents than did the public systems of other states. California's emphasis on public education is clearly evidenced by the fact that its residents attend independent institutions in the state at a rate almost 20 percent below national rates. In addition, Californians show satisfaction with their public system of education in that only half as many Californians select institutions outside their home state as is typical.

California educates 43 percent more students (from both in and out of state), in their public institutions than other states. These enrollments are the result of an extremely high entrance rate for first-time resident students (68 percent above average), above average in-migration from other states (15 percent above average), and relatively high retention rates (8 percent above average). Although these 1979 rates of access are substantially above the national average, still they represent a major decline in access rates (not actual enrollments) from 1975. At that time 47 of every 1,000 Californians were participating in higher education. In 1978 these rates had decreased to 41 per 1,000, a fall of 12 percent. This decline in access rates may well be tied to the 9 percent decline in the number of high school graduates during this period.

California provides this access through a tiered system of universities, state colleges, and community colleges. And, in marked contrast to national patterns, California provides its high rates of student access primarily through its community colleges, which enroll 60 percent of all public students. This share is nearly twice the proportion (36.4 percent) typically educated in public community colleges in the United States. On the other hand, California enrolls only 13 percent of its students in universities, in contrast to national enrollments of 31 percent. California's 27-percent enrollment in comprehensive institutions is similar to patterns in other states. In summary, then, California has demonstrated the largest commitment to access of any state, and its emphasis on a 2-year college education provides a relatively reasonable way (cost-wise) to achieve this access.

Institutional Finances and Characteristics

California supports 136 public institutions. The state provides 55 percent more funds than the norm to educate a pool of students 43 percent larger than usual. In addition, California's combination of heavy emphasis on 2-year education and lesser emphasis on university-level education creates an educational system that on average is less expensive to operate than those in most states. The end result is a system of public education that is very well supported by the state, at levels that range between 16 and 90 percent above average per student. The health professional institution is the only exception; it receives 20 percent less funds per student than the national average.

Largely as a result of this substantial state funding (representing 69 percent of all E&G revenues) and supplemented by funding from other sources, each of California's public institutional segments (except the 2-year sector) operates with total E&G revenues per student (excluding grants and contracts) that substantially exceed revenue levels at other similar institutions. The four university segments and the 2-year occupational segment rank among the five best funded segments in the country. The academic/comprehensive 2-year segment and the health professional segment are funded at levels close to national averages. At the comprehensive and 2-year institutions, state and local appropriations per student are substantially above national levels, while tuition and private gift revenues are significantly below such benchmarks. Tuition revenues in the 2-year sector (at $58 and $70 per student in the academic/comprehensive and occupational sectors) are approximately 85 percent lower than is typical and are no doubt a significant factor in the high access rates in this segment.

These revenues translate into above average expenditure patterns in most cases; public service activities at the public universities and comprehensive state colleges are the exception. Faculty salaries are also funded close to or above average. However a review of salary changes in the 1975 to 1979 period provides a clear profile of salary erosion in California. In many ranks, salary increases were at rates 20 to 30 percent below those at other institutions. Only three other states provided lower rates of increase in salaries overall.

Data Notes

1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded except state funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here.

Postsecondary vocational technical education	$ 41,483,013	(33,220 FTE Students)
State boards and commissions	$ 8,056,651	
Retirement benefits (including social security)	$	
Fringe benefits	$	
Interstate contracts and reciprocity payments	$	
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$	
Centrally administered capital/debt service	$	
Other	$	

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ *

Current Funds revenues dedicated to capital purposes:

—tuition and fees	$ none
—auxiliary enterprises	$ not available
—other	$

Tuition and Fees reappropriated by the state (yes or no) **

Other Comments

* None for the State. State provides construction funds on an appropriation basis. Universitties and state colleges have revenue bonds for non-state supported facilities. Community colleges debt service is as follows:

Redemption - $21,920,515
Interest - 9,560,687

**In the university and state colleges tuition and fees are reappropriated. For the university nonresident tuition is an offset to state General Fund Revenues. At state colleges, resident fees and nonresident tuition are reimbursements to the State General Fund. For the Community Colleges, funds are retained at the district level and are not accounted for at the state level.

The HEGIS finance survey represents approximately 97% of state expenditures for postsecondary education.

Source: California Postsecondary Education Commission

COLORADO

Recent Trends

State and local support to public institutions of higher education in Colorado rose to $209 million in FY 1979, a 33.2 percent increase since 1975. Although this gain in state funding was sufficient to accommodate the 3.5 percent expansion in public sector enrollments, inflation during this period created a 1.4 percent loss in the per student purchasing power of state funding. All sectors, except the University of Northern Colorado and the comprehensive institutions, experienced losses in the constant dollar value of state dollars.

During this period, tuition revenues increased by nearly 10 percent in real dollars adjusted for inflation, a rate sufficient to overcome losses in state funds. The net effect of declines in state funding coupled with major tuition gains was a total revenue pool for public institutions that in 1979 was 4 percent larger than the one in 1975. There are, however, major variations in the extent to which the different sectors of public higher education in Colorado shared in these gains. The general baccalaureate and 2-year sectors suffered losses of 17.1 percent and 3.2 percent respectively in their overall funding levels. The University of Northern Colorado had the largest gain, 27.3 percent, followed by both the comprehensive sector and the Colorado School of Mines, both of which saw their funding grow by 14.5 percent in real dollars per student. The research universities and the health professional sector had the smallest gains, with Colorado State University gaining 1.9 percent, the University of Colorado-Boulder gaining 2.8 percent, and the University of Colorado Health Science Center gaining 5.9 percent.

Despite these general improvements in revenues, all institutional segments in Colorado, except the professional sectors, operate with funds that are 10 to 30 percent below levels of comparable institutions in other states.

State Financing of Higher Education

Colorado's funding for higher education is concentrated in the public sector, providing 90 percent of its support in the form of institutional appropriations, 6 percent in student aid, and 4 percent through other mechanisms. Colorado's level of funding at $89 per capita equals national levels. However, because enrollments in the state's public sector are 40 percent above those in other states, state funds are substantially diluted on a per student basis, even after adjustment for the influx of nonresidents. Colorado's public institutions accommodate 24 percent more residents per capita than is typical among the states.

State Tax Base and Budget

In terms of inherent wealth, Colorado ranks 10th among the states. Its capacity is 8 percent above the U.S. average. And, even though the state taxes itself at below average rates, because of its wealth, it still operates with tax revenues that are 3 percent above average. Colorado draws its public funds principally from general sales taxes, residential property taxes, and individual income taxes. Substantial capacity in farm property and severance tax areas are not heavily utilized.

The state channels a high proportion of its tax revenues to higher education, allocating 14 percent of its total state budget (including Federal revenue sharing funds) to this purpose, a share that is 56 percent above typical levels. In contrast, public welfare, health and hospitals, and miscellaneous services receive lower than average shares of the state's budget. In terms of state tax revenues though, higher education receives an 11 percent share, a portion that parallels the national average.

Higher Education Enrollments

Colorado's system of higher education is predominantly public, with 90 percent of its enrollments in this sector. Residents of Colorado are 6 percent more likely to participate in higher education than are residents of other states. Thirty-one FTE students per 1,000 capita are educated in public institutions, a number 24 percent above the average and exceeded by only six other states. In contrast, only 2 per 1,000 persons are enrolled in private institutions in the state, a level that is one-third less than the typical number. Although 60 percent of students in private institutions across the nation are usually state residents, in Colorado only 46 percent of private students are residents of the state. Typical numbers of Coloradans migrate to other states, with 2 per 1,000 acquiring higher education through this avenue.

A number of factors help Colorado achieve its high public sector access: a larger-than-average high school graduate population, substantial in-migration of students from other states, high student retention rates, and a greater emphasis on full-time study than most states. In total, the public sector accommodates 40.5 FTE students per 1,000 capita, a level 40 percent greater than average.

Students in Colorado are far more likely to receive their education at the university level than elsewhere. Forty-four percent of the students in Colorado enroll in universities; this compares with 31 percent of students in other public systems. The public baccalaureate sector is also larger than usual, enrolling 17 percent of Colorado's students, in contrast to 5 percent in other states. The comprehensive and 2-year sectors, substantially smaller than is usually the case, enroll respectively 13 percent and 23 percent of the students in the state, compared to 26 percent and 36 percent in other states. Therefore, the structure of higher education in this state is on average more expensive than that of other states, and this structure, in combination with the larger than average enrollments, creates significant funding requirements for the state.

Institutional Financing and Characteristics

Public institutions in Colorado, with the exception of the professional institutions, operate with below average funds compared to similar institutions in other states. The universities function with 20 to 30 percent less funds per student; the comprehensive and baccalaureate sectors with 30 percent less; and the 2-year institutions with 9 percent less. This below average funding is evident in the expenditure profiles of these institutions, particularly in the instructional area. The universities, and the comprehensive and baccalaureate institutions in the public sector spend between 10 and 30 percent less on instruction per student than is spent in these sectors in other states. The 2-year and professional schools, by contrast, spend between 15 and 70 percent more than other states on instruction per student.

As is graphically illustrated in the ensuing pages, Colorado relies on tuition revenues for support to a far greater extent than is usual. In Colorado, tuition revenues provide 22 percent of all E&G revenues collected by public institutions, in contrast to the national pattern of tuition providing 15 percent of revenues. With the exception of 2-year institutions, tuition provides more than half the funds for instruction at public institutions, and as much as 78 percent of the costs in one segment. Nationally, such rates are more typically in the 30 to 40 percent range.

Colorado's state contribution to higher education funds is substantially below levels in other states. On average, Colorado's state and local sources provide 42 percent of all E&G funds; the national average share is 59 percent. Although tuition is substantial in this state, the 1978-79 tuition did not compensate for the low levels of state funding. As a result, all sectors—except the professional groups—had to operate with substantially fewer funds than is typical for such schools. The impact of this low funding was evident in faculty salaries. Although the 1975 to 1979 period provided gains in all sectors except University of Colorado-Boulder, where there was a 9 percent loss, salaries in Colorado still trail behind national levels by 5 to 25 percent, depending on rank and institutional sector.

Colorado's higher education system includes 27 public campuses and 14 private institutions. In general, these institutions have a greater share of students at the undergraduate level than at the graduate level, a condition that has a lower funding requirement. The next seven tables contain detailed information about Colorado's expenditures and higher education.

Data Notes

1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state-funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here.

Postsecondary vocational technical education	$ 4,747,291	(4,502 FTE Students)
State boards and commissions	$ 3,994,731	
Retirement benefits (including social security)	$	
Fringe benefits	$	
Interstate contracts and reciprocity payments	$ 40,000	
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$	
Centrally administered capital/debt service	$	
Other	$	

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ not applicable
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$
—auxiliary enterprises	$
—other	$
Tuition and Fees reappropriated by the state (yes or no)	Yes

CONNECTICUT

Recent Trends

State and local appropriations to public higher education in Connecticut increased by 27.3 percent between 1975 and 1979, a rate of gain far smaller than generally experienced by states and largely due to the decline in the FTE enrollment in the state's public institutions. The total FTE enrollment decreased by 4.4 percent between 1975 and 1979, with losses at the University of Connecticut (-7.2 percent) in the comprehensive sector (-8.8 percent) and in the occupational 2-year sector (-12.2 percent). These enrollment losses counterbalanced the below average gains in state funding and the purchasing power of state funds increased nearly 2 percent.

There were major gains in the revenues Connecticut collected from tuition, which when added to the small boost in real dollar state appropriations created a bottom line in Connecticut that was 5 percent larger at public institutions on a per student basis. Although the general profile was one of improvement, losses were experienced in one sector, the University of Connecticut's Health Center, where adjusted revenues fell 26 percent. All other sectors showed some net gains against inflation, led by the main campus of the University at 7.1 percent, followed by both the 2-year campuses at approximately 5 percent, and the comprehensive institutions at 1.5 percent.

The independent sector in Connecticut, which enrolls 40 percent of the state's students, managed to stay even with inflation even after accommodating a nearly 5 percent gain in enrollments. Tuition revenues that were close to 10 percent in real dollar increases were responsible for maintaining the position of private institutions in the state.

State Financing of Higher Education

Connecticut spends $67 per capita for higher education, an amount that is 23 percent below national levels. Seventy-nine percent of these funds are for institutional support (both public and private) while 4 percent goes to student aid. An unusually large share of state funds, 17 percent, support higher education indirectly, paying for such things as fringe benefits and the central provision of services. The vast majority of funds, 94 percent, goes to the public sector, with 3 percent provided to the independent sector, and 3 percent not separately distinguished. Although Connecticut has an unusually large share of students in private institutions, state support to these institutions is still comparatively low, both in terms of student aid and institutional assistance.

State Tax Base and Budget

Connecticut is among the wealthiest states in the nation, ranking 7th nationally, with a tax capacity 12 percent greater than usual. The state utilizes this tax capacity at typical rates and, because of inherent wealth, collects revenues of $877 per capita, 12 percent greater than average. Connecticut's tax capacity is based on high individual and corporate income, property, and on death and gift taxes. Connecticut's tax system, however, relies primarily on sales and property taxes for its revenues and makes relatively little use of its total income strength.

Elementary/secondary education has the largest slice of the state budget, 29 percent. Public welfare is next in importance at 14 percent, followed by public services at 12 percent. Higher education receives an unusually small portion, 6 percent, a share more than 30 percent smaller than usual. This share for higher education has remained unchanged since 1975.

Higher Education Enrollment

Connecticut's residents pursue higher education at rates close to national patterns, largely through attending private institutions in the state as well as institutions in other states. Enrollment by residents in the state's own public institutions is nearly one-quarter below the norm. As a consequence, the share of enrollments represented by the public sector is 60 percent of the total compared to a national average of 75 percent.

Total FTE enrollment in the state's public institutions is almost 65,000, which translates into 20.8 FTE students per 1,000 capita. This enrollment is almost 30 percent less than is typical. Not only is enrollment by residents low but 40 percent fewer nonresidents come to Connecticut for public higher education than is typically the case. By contrast, the private institutions in Connecticut attract unusually large numbers of residents from other states, resulting in a private system of education 50 percent larger than average.

Both the public and private sectors have an unusually large share of enrollment in the comprehensive institutions, 35 and 59 percent, respectively.

Institutional Finances and Characteristics

Connecticut's profile of higher education indicates that state funding and enrollments are both lower than average. Because of these facts, the per student level of state support in Connecticut is fairly close to national rates, only 7 percent below average. However, the University of Connecticut's main campus and Health Center are funded at rates substantially greater than is usual, whereas the remaining public schools receive between 25 and 35 percent fewer state dollars per student than similar schools in other states. This distribution pattern is repeated in the total revenue levels of public institutions in Connecticut. For instance, tuition at the public institutions is surprisingly low for a state with a large independent sector. Gift income is also substantially below average, though some individual sectors are better at securing revenues from this source than are others.

Faculty salaries in Connecticut are above average in both the public and private sectors, with major gains in pay evident between 1975 and 1979, primarily attributable to the 2-year sector, since 1975 baseline data for the University were not available.

Public institutions in Connecticut are generally smaller in size and more graduate oriented than most. This creates a more expensive base of education to support and explains in part the above average support for this sector. The independent institutions, by contrast, are larger but also more graduate oriented than similar schools elsewhere.

Data Notes
1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here.

Postsecondary vocational technical education	$
State boards and commissions	$ 3,044,037
Retirement benefits (including social security)	$
Fringe benefits	$ 30,922,021 (estimated) (and retirement)
Interstate contracts and reciprocity payments	$ 428,000
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$ 1,679,212 (estimated)
Centrally administered capital/debt service	$ *
Other External degree programs	$ 153,918

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$
—auxiliary enterprises	$
—other	$
Tuition and Fees reappropriated by the state (yes or no)	**

Other Comments

* Debt service for all state agencies is paid out of one central account appropriated from the state's general revenues, and is not identified separately for higher education.

** Tuition is paid directly to the state General Fund, and is unrelated to institutional expenditures or appropriations. Fees for noneducational purposes (room, board, student activities, athletics, etc.) are retained by the institutions and expended without reappropriation.

DELAWARE

Recent Trends

Between 1975 and 1979, Delaware experienced major gains both in state funding for higher education and in the numbers of students to support. State appropriations increased by 51.6 percent while enrollments grew by 19.9 percent in the public sector. Because enrollment gains were so large, the increase in state funds was insufficient to accommodate both new students and inflation. The constant dollar per student value of state funds therefore fell by 3.3 percent. Tuition revenues also fell, in adjusted terms, by nearly 2 percent, which, in combination with state funding losses, created a net revenue base that shrank by 1.5 percent overall. The four 2-year occupational institutions in the state were hit hardest by this overall decline, with constant dollar revenues shrinking 14.4 percent per student. The University of Delaware and Delaware State College actually improved their net revenue positions by 4.3 and 9.7 percent, respectively.

State Financing of Higher Education

Delaware spent $82 per capita in 1979 to support higher education. The bulk of these funds, 97 percent, went into public institutional appropriations, 1 percent went to student aid, and 3 percent went to indirect support, primarily to private institutions for medical and veterinary education. (Because of rounding, these percents add to 101 percent.)

State Tax Base and Budget

Delaware is the fourth wealthiest state in the nation in terms of tax capacity, having a 23 percent greater capacity to raise taxes than most states. This wealth is tied to high sales levels and to both individual and corporate income and property capacity. Delaware under-utilizes this capacity, with the result that tax revenues actually collected in the state are just below average levels. Stated differently, Delaware has a low tax rate and still raises average tax revenues because of its inherent wealth. The 23 percent greater tax capacity is counterbalanced by a 21 percent lower tax effort. Delaware's tax structure emphasizes individual income taxes and 40 percent of its tax revenues come from this source. By contrast, there is no general sales tax in the state (there are selective sales taxes); the corporate income tax rate is only 70 percent of the national rate, and corporate property taxes are 30 percent of national rates.

The state's budget is divided as follows: 27 percent to elementary/secondary education, 14 percent to higher education, 11 percent to public services, 9 percent to public welfare, 8 percent to highways, 5 percent to health and hospitals, and 26 percent to miscellaneous. Higher education's 14 percent share is substantially larger than that of other states, though it has not changed since 1975. When only tax revenues are examined, higher education's share is equal to the national average.

Higher Education Enrollments

Delaware residents are approximately 10 percent less likely to attain higher education than are residents of other states. While 30 per 1,000 Delaware residents participate in higher education, a rate of 33 per 1,000 is more typical in the United States. These below average access rates appear to be directly tied to the generally low enrollment rates within the state. Eight percent fewer residents enroll at public institutions in Delaware than elsewhere, and 50 percent fewer enroll at private institutions in the state. Although twice as many residents go outside the state for higher education as is usual, this out-migration does not compensate for the lower enrollment within the state's boundaries.

Surprisingly, despite low enrollments by residents in the state's public institutions, large numbers of students from other states come to Delaware in pursuit of higher education. In fact, Delaware is third in the nation (behind Alaska and Arizona) in its enrollment of nonresidents in public institutions, enrolling almost five times more than the usual number. The net effect is a public sector almost 30 percent larger per capita than the national average, enrolling 37 FTE students per 1,000 in contrast to a national average of 29 per 1,000. The independent sector, however, is low in both resident and nonresident enrollment and as a consequence is 40 percent smaller than average.

Delaware's public sector, while relatively large for the size of the state, includes only 21,586 FTE students. Seventy-two percent of these students enroll at the University of Delaware, 20 percent at the four 2-year occupational institutions, and the remaining 8 percent at Delaware State College. These figures indicate that Delaware's system of public education is decidedly more ''university'' level in focus and, consequently, a relatively expensive state system by national standards. The private sector is almost entirely 2-year in nature, with 86 percent of its 3,230 students in one of two such institutions. Wilmington College, a baccalaureate school with 462 students, enrolls the remaining 14 percent of private students.

Institutional Finances and Characteristics

State funding per student in Delaware's public sector is below national rates, though patterns of support vary by institution. The smaller public institutions receive above average state funding while the University of Delaware receives 30 percent less than average per student. The campus, however, derives large amounts of funding from tuition revenues (index 180), private gifts, grants, and endowments (index 477), and other sources (index 254). As a result, on a per student basis, the revenue pool at the University of Delaware is 25 percent greater than average, more than compensating for low state support. In addition, the school receives approximately 10 percent more in government grants and contracts per faculty member than similar schools elsewhere. Delaware State College also does well in securing revenues from a variety of sources, and it operates with 34 percent more funds per student than the average. The 2-year schools are funded right at the U.S. average.

Faculty salaries in Delaware are above average in the public institutions but below average in the private sector. Both sectors showed major improvements between 1975 and 1979, with the public sector showing gains of 30 percent and the private sector 42 percent.

Although the University of Delaware is adequately sized, the other schools in Delaware are very small in relation to their peers elsewhere. Delaware's emphasis on graduate level study is fairly low in national terms. For instance, at the University of Delaware, graduate enrollments comprise only 7 percent of the student body, which is low in comparison to a national average of 15 percent for similar schools.

Data Notes
1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state-funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here.

Postsecondary vocational technical education	$	
State boards and commissions	$	41,300
Retirement benefits (including social security)	$	
Fringe benefits	$	
Interstate contracts and reciprocity payments	$	32,000
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$	
Centrally administered capital/debt service	$	
Other Educational contracts with independent institutions for medical and veterinary education	$	1,165,000

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$	8,794,700
Current Funds revenues dedicated to capital purposes:		
—tuition and fees	$	
—auxiliary enterprises	$	yes, but amounts unknown
—other	$	

Tuition and Fees reappropriated by the state (yes or no) Yes*

Other Comments

* Tuition and fees are reappropriated from one public institution only: Delaware Technical and Community College (four campuses).

Source: Delaware Postsecondary Education Commission

DISTRICT OF COLUMBIA

Recent Trends

The District of Columbia's higher education system, in contrast to the states, is almost entirely independent in character, and only 12 percent of its students are in public institutions. In 1979, local support provided to the District's only public institution, a comprehensive school—the University of the District of Columbia (UDC)--amounted to $47.8 million. Because UDC data for 1975 were not reported to the Federal Government, funding trends are not shown in this study.

Since 1975 enrollments in the independent sector have fallen by only .4 percent, and 51,558 FTE students were enrolled in academic year 1979. Because of large increases in tuition revenues in the independent sector, these institutions have, with the exception of the baccalaureate schools and specialized institutions, made substantial gains in revenues, even after adjustment for inflation. George Washington University (GW) had a net increase of nearly 37 percent in its spending capacities, Georgetown University and Howard University combined gained nearly 30 percent, and American University and Catholic University combined showed revenue improvements of 9.3 percent.

State Tax Base and Budget

The District is the fifth wealthiest unit in the United States, with a capacity to raise tax revenues that is 18 percent above the U.S. average. Coupled with this basic wealth is a high rate of taxation, exceeded by only two other states (New York and Massachusetts). Because the District has a strong economic base to tax and heavily utilizes that capacity, the District has a pool of tax revenues over 40 percent greater than average. Only New York, with $1208, and Alaska, with $1201, have funds that exceed the District's $1099 to support public services. The District's tax capacity is tied to its volume of economic activity in general and selective sales, individual incomes, residential and commercial properties, and death and gift transfers. Its tax structure emphasizes individual and corporate income, selective sales, and death and gift transfers, categories in which the District ranks among the top 12 nationally.

The District's use of these tax revenues differs from traditional patterns in the states. Public welfare and public service each consume 16 percent of the local budget, with the miscellaneous category consuming a whopping 35 percent. Elementary/secondary education, which usually represents about 27 percent of a budget, in D.C. receives only 16 percent. Similarly, higher education's share at 4 percent is less than half the usual portion. Given that there is only one public institution, and that 88 percent of enrollments in the District are in independent institutions, this share is understandable. Higher education's slice of the budget at 4 percent has not changed since 1975.

Higher Education Enrollments

D.C. residents are far less likely than average to enroll in higher education. In the District, 23 per 1,000 attend college, whereas nationally the figure is 33 per 1,000, a substantial difference. Lack of access to public education accounts for the difference, since District residents already attend independent institutions in state and out of state in substantially greater numbers than usual.

Since the District's one public institution is classed as comprehensive in mission, all enrollments are in this sector. In the independent sector, 24 percent of the students enroll in GW, the research university, and 66 percent in the other four universities in the area. Emphasis on university-level education is thus a predominant pattern in the District, far more so than is typical. A small percentage of students, 5 percent in each case, are enrolled in D.C.'s independent baccalaureate and 2-year institutions.

D.C.'s private sector is extremely successful in attracting residents of both the District and other states. These institutions enroll nearly 18 times more students than would be expected, and 50 percent more residents than usual, given the District's population base.

Institutional Finances and Characteristics

The University of the District of Columbia is a very well supported institution, receiving $7175 per student in 1979, more than twice the national average for comprehensive institutions. The District government is the primary provider of its revenues, contributing 78 percent of the institution's funds. Private gifts and endowment income are obtained at nearly twice the national rate. UDC is also highly successful in obtaining government grants and contracts, again at almost twice the typical pattern.

D.C.'s independent institutions are also receiving above average funding. The only major sector with below average funding is GW, with only half the revenues typically associated with such institutions, research university, medical. Tuition revenues are an important source of funds. Therefore, in the case of universities with medical programs like GW, "other" sources are unusually important.

These positive funding positions are reflected in faculty salaries, which are more than 10 percent above average in both the public and independent sectors. However, trend data for the independent sector indicates that overall salary increases recently have not kept pace with increases elsewhere. This circumstance varies by sector. GW has shown above average increases in recent years whereas the other sectors in general have lagged behind national rates of increase.

Data Notes

1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state-funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here.

Postsecondary vocational technical education	$
State boards and commissions	$
Retirement benefits (including social security)	$
Fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$
—auxiliary enterprises	$
—other	$
Tuition and Fees reappropriated by the state (yes or no)	

Other Comments

The figures for FTE enrollment reported in this study are substantially lower (58,764 vs. 87,854) than information maintained by the District Commission on Postsecondary Education.

In addition, figures on the distribution of these enrollments between public and independent sectors vary. NCES statistics indicate that 12% of FTE students are in public institutions and 88% in independent institutions. Figures from the Distict Commission on Postsecondary Education show a higher percent in public institutions, 17% and a lower proportion in independent institutions, 83%.

FLORIDA

Recent Trends

Florida's public sector lost financial ground between 1975 and 1979. Increases in state funds and tuition were completely overpowered by both major enrollment increases and inflation. With enrollments growing by 16.3 percent in the public sector, increases in state funds of 39.8 percent were inadequate for keeping the purchasing power of state dollars even level. Overall, the value of state and local appropriations declined by 8 percent in constant dollars per student. This, coupled with a 3.9 percent loss in real dollar tuition revenues, caused the public system's financial position to erode by 7.4 percent per student in inflation adjusted dollars.

These losses were not, however, evenly distributed among all categories of Florida's public system. In fact, improvements in funding were experienced in two quarters. The University of South Florida had a 15.2 percent gain in E&G purchasing power, despite adjustments for inflation and a 3.9 percent increase in students. The 27 2-year institutions, with a comprehensive/academic program emphasis, also experienced improvements in their base of nearly 4 percent. By contrast, the worst setback occurred at Florida State University, which lost almost 25 percent of its real dollar revenue base. The University of Florida also suffered a major financial setback, losing 15.3 percent in the value of its revenues per student. South Florida Junior College lost 9.2 percent in E&G revenues per student after adjustment for inflation. And the six comprehensive institutions combined lost 2.3 percent.

Independent institutions in Florida also saw the value of their funds eroded by inflation and major enrollment gains of 41.2 percent. Again, the different sectors among the independent institutions experienced substantial funding variations, with losses occurring in the occupational 2-year schools, the general baccalaureates, and the comprehensives. The University of Miami and Reed University, however, fared well in this period with adjusted revenues per student growing by 11.6 and 29.2 percent, respectively.

State Financing of Higher Education

Florida ranks 41st in the nation in its per capita support of higher education, spending $67 per person, a level 22 percent below average. As in most states, almost all state funding is directed to the public sector, and in Florida, 97 percent of all support goes to aid either students or institutions in the public sector. Florida does however provide both student aid and institutional appropriations to the independent sector, but in both cases at below average rates. This is not surprising given that Florida's enrollment in the independent sector is smaller than usual.

State Tax Base and Budget

Florida has above average resources to draw on in support of public functions, ranking 15th nationally in tax capacity. The state's above average tax capacity is due to high levels of general and selective sales, residential property, and death and gift transfers. However, except for selective sales, Florida has below average tax rates in each of these categories. This low tax effort results in tax revenues one-quarter below typical levels, and it largely explains why, despite their strong capacity, Florida's tax revenues are so low.

This condition explains why Florida's support to higher education ranks so low nationally. Although the share of tax revenues devoted to higher education is average (though somewhat lower if the total state budget includes Federal revenue sharing funds), the small size of the tax pool creates a below average level of support.

Census Bureau data indicate that Florida's budget strongly emphasizes expenditures for health and hospitals and public services. Shares for higher education and elementary/secondary education are just below average, while welfare receives one-half the share of the budget it is typically accorded. Recalling that the size of the state budget in Florida is smaller than usual, functions receiving smaller than usual shares are thus doubly impacted.

Higher Education Enrollments

Florida ranks 41st in the nation in terms of the number of its residents who enroll in higher education. Although a typical number of Florida's residents go out of state for higher education, a below average number enroll in both the public and independent sectors. As a result, Florida residents are almost 20 percent less likely to participate in higher education than are residents of other states.

Conversely, the state does attract an above average number of nonresidents to the public system of higher education, causing enrollments in this sector to rise, to a level just 11 percent below average. The private sector, however, enrolls fewer residents and nonresidents than is typically the case.

There is an unusually large concentration of students in the public community colleges in Florida, representing 55 percent of enrollments, in contrast to most other systems where 2-year students make up 36 percent of the total. The emphasis on university education is similar to national patterns, but the comprehensive institution emphasis is almost half the traditional rate.

Institutional Finances and Characteristics

Although Florida's level of support to higher education is comparatively low, the state's system of higher education, with its major emphasis on 2-year institutions, enrolls fewer students than usual and, thus, in relative terms is less expensive to support. In addition, the system's focus on graduate studies is lower than average, and schools are generally larger than average in size. These combined conditions reduce the expected financial load on the state and create a system of higher education that is, in comparative terms, less expensive to operate. State appropriations per student are somewhat below national norms generally, but 18 percent above average at the University of Florida and 21 percent above at the six comprehensive institutions in the public sector. The University of South Florida receives about 6 percent less than average in state funds per student, whereas Florida State University matches the national average. The 2-year schools with comprehensive/academic program emphases are just below average in state funding, whereas the occupational 2-year schools receive 70 percent more than is typical. The levels of tuition and other revenues differ among institutional segments, but in terms of total E&G funding (excluding government contracts), all sectors are at or above national averages with the exception of the University of South Florida at 21 percent below, and the six comprehensive schools at 14 percent below. In contrast, the independent institutions generally are funded at levels 20 to 40 percent below average.

Faculty salaries in Florida are approximately 8 to 9 percent below average in both the public and independent sectors. In addition, recent trends suggest that all public sectors, except the occupational 2-year schools, have increased faculty salaries at rates 20 to 30 percent below those of other states. Thus, although each public segment appears to have near average funding, this level of support is not evident in recent salary increases of faculty.

Data Notes
1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state-funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here.

Postsecondary vocational technical education	$
State boards and commissions	$ 7,567,101
Retirement benefits (including social security)	$
Fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$ 2,660,946
Centrally administered capital/debt service	$
Other Regional education, community hospital education program.	$ 4,322,505

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$
—auxiliary enterprises	$
—other	$
Tuition and Fees reappropriated by the state (yes or no) *	

Other Comments

* Reappropriated for the state university system but not for the community college system.

Although South Florida Junior College is not generally considered "occupational" within the state, the larger number of graduates in these fields from the institution caused it to be so classified in the NCHEMS classification system.

Source: Florida Department of Education

GEORGIA

Recent Trends

Increases in Georgia's state appropriations to higher education were somewhat below national patterns, growing by 44.5 percent between 1975 and 1979, compared to 47.7 percent for the U.S. as a whole. However, enrollments in Georgia expanded nearly 50 percent faster than the national standard, thus reducing the real dollar value of state funds per student to a small increase of only 1.6 percent in the public sector. Sectors which experienced enrollment growth were unable to accommodate both these enrollments and inflation, and with the exception of the Georgia Institute of Technology-Southern Technical Institute, these sectors saw a decline in the real dollar value of both state appropriations and total E&G revenues per student (excluding government grants and contracts). Revenues from tuition and fees per student, after adjustment for inflation, also fell by an average 8.8 percent in the public sector.

State Financing of Higher Education

Although Georgia channels a relatively large share of state tax revenues to higher education, the small size of the total state budget causes funding of higher education to be below average by nearly 10 percent. Georgia provides $79 per capita in support of higher education, ranking the state 30th in the nation. The bulk of this funding goes to the public sector, though some student aid and other support is provided to the independents. Eighty percent of state funds for higher education are allocated to institutional support, 3 percent to student aid, and a relatively larger share, 17 percent, going for indirect support (primarily for vocational education and separate retirement benefits). As a result of the exclusion of the vocational sector from the remaining analysis, enrollments and funding are underestimated in the ensuing sections of this report on Georgia.

State Tax Base and Budget

Georgia is a state with very low inherent tax capacity, which is exacerbated by a below average tax effort. In fact, Georgia's capacity to tax is below average in all but two categories: selective sales and public utilities property; further, the state underutilizes its capacity in all but one category, corporate income taxes. As a consequence, state tax revenues are approximately one-quarter lower than the average state. Only 11 other states operate with less revenue per capita.

Georgia provides near typical budget shares to elementary/secondary and higher education, but particularly below average shares to both public welfare and public services. By contrast, health and hospitals are heavily supported, with a 67 percent above average share, as are highways, with a 22 percent greater than average share. Higher education's share of the budget has been unchanged since 1975.

Higher Education Enrollments

Residents of only three other states—Indiana, Arkansas, and West Virginia, plus the District of Columbia—are less likely than Georgian residents to attend higher education. Since enrollments in the vocational-technical sector are not included in these figures, this low access rate is inconclusive. Still, Georgians' educational proclivities appear substantially less than those of other states' residents. The low access rates are evident in every enrollment category, both inside and outside the state, despite recent enrollment increases in the public sector. The 8.9 percent gain in enrollments at Georgia's public institutions was nearly 50 percent greater than experienced in other states between 1975 and 1979.

Enrollments are heavily concentrated within the three universities in the state, which combined account for over 40 percent of the total. This is an unusually large share and is a more expensive type of education to support. Associated with this heavy university emphasis, the state's share of graduate enrollments is also about 50 percent larger than usual. These two circumstances combine to create a further financial load on the state.

Institutional Finances and Characteristics

Because per capita enrollment is below average in the public sector, Georgia's lower level of state funding overall is counterbalanced to some degree. Per student revenues in the public sector are slightly above average. However, state and total funding per student varies considerably among the different sectors.

The University of Georgia is the only large public sector that is above average in both state funding and total E&G revenues, on a per student basis. Two smaller sectors, the public baccalaureates and the Medical College of Georgia, also are funded by the state and, in total, at above average rates. However, every other public sector functions with funds that are between 6 and 40 percent below average. Surprisingly, most independent institutions in Georgia are funded at above average rates.

Faculty salaries in Georgia are generally below average for all ranks, but, again, there are substantial variations among the different types of institutions. For instance, the universities in general are funded just at the average for upper rank faculty. At all other types of public institutions, salaries are generally 15 to 25 percent below average for these same faculty ranks. These conditions exist despite recent salary increases in these schools that generally exceeded national patterns.

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 18,060,562
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$
—auxiliary enterprises	$ 2,783,088
—other	$

Tuition and Fees reappropriated by the state (yes or no) No

Other Comments

In the Public Health Professional category, expenditures are approximately $20 million less than revenues because of the exclusion of hospital expenditures in the expenditure side but not from the revenue side where they can be included within state and local appropriations.

HAWAII

Recent Trends

Appropriations to public institutions in Hawaii increased by 69.1 percent between 1975 and 1979, exceeding national rates of growth by 45 percent. Furthermore, with only a 2.3 percent gain in enrollments, the value of these state monies spurted ahead by 26.5 percent per student, even after adjustment for inflation. This real dollar improvement in state funding was the 9th best in the nation and, despite declines in the inflation adjusted value of tuition revenues of 6.8 percent, produced an overall improvement in E&G funding per student of 20 percent. It is impressive that in Hawaii every public sector shared in these funding gains.

The greatest improvements occurred within the two general baccalaureate campuses of the University of Hawaii system, Hilo and West Oahu, even with a gain of 6.5 percent in enrollments. These institutions combined had a 55 percent gain in real dollar E&G revenues per student. The main University of Hawaii campus at Manoa showed a gain of 22.4 percent, after adjustment for enrollment changes and inflation. The University's four 2-year campuses, which emphasize comprehensive and/or academic curriculas, saw adjusted revenues improve by 28.4 percent, and the two occupational 2-year campuses (Honolulu and Kapiolani) showed a gain of 22.6 percent, in constant dollars per student.

By contrast, the independent institutions in Hawaii, as a group, lost 7.1 percent in the purchasing power of their funds. These losses were centered in the two private baccalaureate institutions, while the specialized school (Hawaii Pacific College) showed a 7.6 percent gain in funds after adjustment for inflation and enrollment changes.

State Financing of Higher Education

Hawaiians support higher education at a rate more than 60 percent above national averages. The state and localities provide $142 per capita to public colleges and universities, placing Hawaii third in the nation in their support of higher education (following Wyoming and Alaska). There are no state-supported student aid programs; all funds are funneled either directly to the public institutions or, through separate arrangements, they cover fringe benefits, centrally provided services, the system's administration, or vocational-technical education.

State Tax Base and Budget

Hawaii has an above average tax capacity, ranking 11th nationally. Even more notable, however, is the high rate of taxation in the state, a rate exceeding typical state patterns by 15 percent. Only four other states are more willing to tax: New York, Massachusetts, California, and Wisconsin, plus the District of Columbia. As a result of inherent tax wealth and a willingness to utilize most of its capacities, Hawaii raises tax revenues that are 23 percent greater than average on a per capita basis; it raised $963 per person in 1977.

The state's tax structure emphasizes sales and income tax categories (general and selective sales taxes and individual and corporate income taxes), and 80 percent of all tax revenues are collected in these particular areas. Property taxes are a fairly minor source of Hawaii's tax revenues, particularly in the residential property category. Yet, by contrast, Hawaii ranks first in the nation in potential in this category, but 45th in efforts to utilize the source.

Census data for 1979 show that these relative rates of state funds, in combination with Federal revenue sharing contributions, established a budget of $1884 per capita for the state, a level 27 percent above average. Although the largest single share of taxes, 18 percent, is budgeted for elementary/secondary education, this share is more than 30 percent below the portion typically allotted for this purpose. Public welfare is next in size, garnering 13 percent of state expenditures, followed by public services at 12 percent, and higher education at 11 percent—all shares that exceed typical allocations in the states. Both highways, and health and hospitals receive a smaller-than-usual slice of the state budget, 7 percent each, shares that are 22 percent smaller than is typical. Still, because in every case the shares allotted are from a larger-than-average state pie for public programs, the actual dollars involved may be more than expected. Therefore, higher education is doubly benefited by receiving an above average portion of a larger sized budget. In addition, Census figures indicate that between 1975 and 1979 higher education's portion of the budget expanded from 10 percent to 11 percent of the state's budget.

Higher Education Enrollments

Residents of Hawaii are 12 percent more likely to participate in higher education than the typical state resident. On average, 37 of each 1,000 Hawaiians are enrolled full time in college. The majority of these students attend public in-state institutions, though large numbers of residents also go out of state for higher education. Only a small fraction participate in the state's independent institutions. These rates of access rank Hawaii among the leading states in college participation by state residents. Only five other states do better (California, Massachusetts, Arizona, Washington, and Oregon). It is interesting to note that these rates of access are among the highest nationally.

Hawaii's higher education system is almost entirely public, and 93 percent of its students are in public institutions. Hawaii ranks sixth in its orientation toward public higher education. And, more than half the public students are enrolled at the Manoa campus of the University of Hawaii. The state's other large sector is made up of its 2-year institutions, which enroll 40 percent of the students. Only 8 percent of students are enrolled in public baccalaureate institutions, and there is no comprehensive institution sector in Hawaii. This concentration of students in the university sector creates a system of higher education that is, on average, more expensive to support than those in typical states. However, the graduate emphasis of the university is less than typical, with the result that, overall, the state share of graduate education is only slightly greater than average.

Institutional Finances and Characteristics

Hawaii is generous in its support of higher education and, at the same time, obtains for its citizens very high rates of access to the system—a higher education system that is almost exclusively public in character. State support per student is 17 percent above average. However, because revenues from tuition, in particular, and other sources are substantially below average, the net result is that per student support in the public sector is 3 percent below average. However, funding by sector is generally 15-40 percent below average. The only exception is the small public baccalaureate sector, which in total, is funded at the national rate. The largest sector, the public university, operates with funds 21 percent below average. The 2-year schools with academic and/or comprehensive programs are funded at 15 percent below average, while the 2-year occupational schools operate with revenues 40 percent below norm.

Since state funding is substantial and residents are already highly taxed, the major source for bringing these budgets closer to typical levels appears to be tuition. However, tuition revenues in Hawaii are 44 percent below those generally collected across the United States. And in the 2-year sector, such revenues are 70 to 75 percent below average. Although low tuition rates have no doubt encouraged the high access rates, their continuation poses important policy decisions for the state and its institutions, given the considerable impact of low funding rates in the public sector.

Below average funding in Hawaii's public system is not apparent in faculty salary levels nor in recent rates of increase in those levels. In fact, faculty salaries in Hawaii's public institutions are at or above national rates for every major rank. In addition, the recent rates of increase have exceeded typical levels across the states by 27 percent. Between 1975 and 1979 faculty salaries nationally increased by 28 percent; in Hawaii the gain was 35 percent. Salaries at the independent institutions also grew at above average rates.

Data Notes
1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state-funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here.

Postsecondary vocational technical education	$ 2,332,577
State boards and commissions	$ 5,810,765*
Retirement benefits (including social security)	$
Fringe benefits	$ 8,419,000**
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$ 2,840,923
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$
—auxiliary enterprises	$
—other	$
Tuition and Fees reappropriated by the state (yes or no)	Yes

Other Comments

* Institutional support--includes the actual administrative offices and support units such as the offices of the President, Vice President, Secretary of the University, Board of Regents, Business Offices, Personnel Office, Postsecondary Education Commission, State Director of Vocational Education and Community Colleges Administration.

**includes retirement benefits as well

Most of the University's construction projects are administered by the State of Hawaii's Department of Accounting and General Services. Upon completion, the project cost including amounts funded from state and federal sources are recorded by the University. The University's federal funds for capital purposes are transferred to the State.

In 1976, the State of Hawaii financed the construction of the student dormitories and the parking structure by issuing general obligation bonds. The University is liable to the State for debt service payments on these bonds. The payments of principal and interest on these bonds are recorded on the University's retirement of indebtedness fund.

Source: University of Hawaii

IDAHO

Recent Trends

Idaho's public institutions received major improvements in their funding between 1975 and 1979. A 70 percent increase in state appropriations was more than adequate in accommodating both the 6.3 percent increase in students and the inflation of the period. As a result, the real dollar value of state dollars jumped 22.6 percent on a per student basis, the eleventh largest gain in the nation. This forward movement in state support was accompanied by a gain in tuition revenues as well, with the result that total E&G revenues per student, even with adjustment for inflation, increased by 18.3 percent in the public sector. All areas shared in these improvements except the public 2-year schools, whose funds fell 8 percent per student in real dollar terms, primarily because of major enrollment gains of 41.3 percent.

Funding improvements also occurred in the private sector, even with the nearly 13 percent gain in enrollments. In fact, overall, E&G revenues increased by 22.9 percent, largely because of tuition gains at Rick College, an institution that enrolls 76 percent of private students in Idaho.

State Financing of Higher Education

With these recent gains in funding, the state's level of support to higher education reached $101 per capita, a level 16 percent above the U.S. average. This rate of support is particularly impressive given that the state is below average in both tax capacity and tax effort. Idaho achieves this level of support by directing an above average share of the state budget to higher education.

All of these monies are channeled to the public sector, with the exception of a very small level of indirect higher education support (1 percent) not separately identified by sector. These latter funds support 400 FTE students in vocational education, the state commission, and a separate retirement fund.

State Tax Base and Budget

Idaho ranks 40th among the states in its capacity to raise taxes. It has below average tax capacity in each of the major tax categories: general and selective sales, individual income, and residential and commercial property. Even with its low inherent wealth, Idaho underutilizes every tax category, except income taxes (both individual and corporate), with a resulting level of tax revenues that are 20 percent below average.

The state's budget assigns above average priority to highways (index 144), higher education (index 111), public services (index 109), and elementary/secondary education (index 104). Health and hospitals are funded at national rates, whereas public welfare and "other" categories are underfunded by comparison. Although highways' budget share (13 percent) in 1979 was substantially better than average, this allocation has fallen since 1975 when it represented 16 percent of the state budget.

Higher Education Enrollments

Despite the state's provision for above average support to higher education, fewer residents of the state attend than is typical. In-state enrollment in both the public and private sectors is lower than would be expected. Twenty-seven residents per 1,000 gain access to higher education in Idaho in comparison to a national rate of 33 per 1,000. Idaho is above average only in that its residents go out of state for schooling, at rates 50 percent greater than is usual.

Idaho is very attractive to students from other states, and nonresidents enroll in both the public and private sectors at rates far above the average, 75 and 58 percent, respectively. In addition to this substantial nonresident enrollment, the public institutions compensate, in part, for the low rates of enrollment of state residents with above average retention rates and greater full-time rates of attendance. The result is that the level of public sector enrollments is very close to national levels. Idaho's public institutions enroll 27.7 FTE students per 1,000 capita, just 4 percent fewer than average. The state has six public institutions of higher education and three private colleges, and it mirrors national patterns of emphasis between these two sectors: 75 percent of students are in public institutions and 25 percent in private schools.

Boise State and Idaho State Universities are the state's two comprehensive institutions and, combined, enroll more than half the students in the public sector, an unusually large share. The University of Idaho enrolls another 30 percent, and the baccalaureate and 2-year schools account for the remaining 20 percent, an unusually small share. By contrast, the independent sector enrolls three-quarters of its students in the 2-year college (Ricks College).

Institutional Finances and Characteristics

This combination of above average funds in support of near average numbers of students results in a system of public higher education that is substantially above average in state funding. On a per student basis, state appropriations in Idaho are 32 percent above average and are responsible in part for total E&G revenues (excluding government grants and contracts) that are 22 percent above U.S. norms.

This overall profile is repeated or bettered in each individual segment. The University of Idaho and Lewis and Clark State College operate with funds 60 percent or more above average, on a per student basis. The two 2-year schools (College of Southern Idaho and North Idaho College) collect revenues that are 38 percent above average, and the largest sector, the comprehensives (Boise and Idaho State) have funds 18 percent above average. Tuition is the only source of revenues that is below average. Approximately 40 percent fewer funds come from tuition than is typical; but, as shown, this shortfall is compensated for in other revenue categories.

Surprisingly, faculty salary levels do not reflect these above average funding rates. Overall, salaries are 10 percent below average, despite better-than-average improvements between 1975 and 1979. No upper rank faculty group in Idaho was paid at or better than the average in 1979.

Data Notes

1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here.

Postsecondary vocational technical education	$ 1,018,420	(400 FTE Students)
State boards and commissions	$ 518,700	
Retirement benefits (including social security)	$ 277,500	
Fringe benefits	$	
Interstate contracts and reciprocity payments	$ *	
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$	
Centrally administered capital/debt service	$	
Other	$	

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$
—auxiliary enterprises	$
—other	$
Tuition and Fees reappropriated by the state (yes or no)	**

Other Comments

- Funding for WICHE Student Exchange Program, the University of Utah Medical School contract, the Creighton Dental School program, and the Family Practice Residency Program is appropriated directly to the State Board of Education and, therefore, is not included in HEGIS.

**Nonresident tuition and certain student fee revenues are appropriated. Idaho does not charge resident tuition at its four-year public institutions.

Source: Idaho State Board of Education

ILLINOIS

Recent Trends

State and local appropriations in Illinois increased at far slower rates between 1975 and 1979 than was typical. The state and localities in Illinois appropriated $773 million for public institutions in 1979. This represented a 26.3 percent increase since 1975, but it was still more than 45 percent lower than the 47.7 percent jump that occurred nationally. In fact, only two states, Maine and New York, had smaller gains in state funding. A compounding condition is the fact that during this same time period enrollments in Illinois' public sector generally increased by 7.1 percent, a rate 18 percent faster than the U.S. pattern. In the face of inflation and these greater than average enrollment gains, the constant dollar-per-student value of state monies was eroded by nearly 10 percent, a major decline.

Illinois institutions varied in the extent to which their state dollars gained or lost. Three sectors lost enrollments—University of Illinois, Urbana, the two doctoral (non-medical) institutions (Northern Illinois and University of Illinois Chicago Circle), and the comprehensive sector. The first two of these sectors experienced improvements in their state and locally funded base. The comprehensives lost both enrollments and purchasing power with state funds. Real gains in tuition revenues helped to modify overall losses in E&G revenues per student. Overall, tuition revenues gained 1.1 percent per student, even after adjustment for inflation. Still total E&G revenues per student, in constant dollars, fell by 3.2 percent for the public sector as a whole. However, the overall decline in total funds was tied to decreases in two sectors: Southern Illinois University and the 2-year sector (with academic/comprehensive programs), representing 49 2-year campuses. These two sectors showed losses of 10.3 and 17 percent, respectively, in inflation adjusted dollars per student.

Fueled by a significant real dollar gain in tuition revenues, the independent sector in Illinois gained 10 percent in its total E&G revenues per student, even after adjustment for inflation. Only the independent health professional sector suffered any major loss in the total purchasing power of its funds. Although the loss for that sector was substantial, 16.1 percent, other private sectors gained as much as 33 percent, though the mean improvement was only 10 percent.

State Financing of Higher Education

In 1979, Illinois spent $80 per capita to finance higher education. This level of support was 8 percent below average and occurred because a relatively low share of tax revenues (15 percent below average) was channeled to higher education.

The state is diverse in its methods of supporting higher education, funding public and private institutions directly and providing student aid in both sectors. The state exceeds national rates in the extent to which independent students and institutions are supported, as well as in the amount of student aid that students attending public institutions in the state receive. By contrast, state support in the form of public institutional appropriations is below typical rates.

Illinois spends 9 percent of its higher education budget for student aid, a share that is more than twice the usual allocation (index 225). The State also funnels 7 percent of its funds to the independent sector, again a share that is more than twice the expected allocation (index 233). As a result, the level and share accorded to public institutions is substantially reduced. The $69 per capita that these institutions receive represents 86 percent of all higher education dollars and is 12 percent below normal.

State Tax Base and Budget

Illinois ranks eighth in the nation in its inherent tax wealth, and it has a 12 percent greater capacity to raise taxes. An average tax rate would yield $877 for public purposes. Despite a tax effort that is just below average, the strong tax base in the state still yields $845 per capita, a level 8 percent above average. Illinois's strong tax capacity is tied to above average individual and corporate income, commercial property, and high volumes of sales activity. Its tax structure does not utilize fully its capacity to tax income and relies instead on sales and property taxes to raise public monies.

The state's use of these funds shows an above average emphasis on public services and public welfare (indexed at 118 and 117 respectively), and on elementary/secondary education (index 104), which receives a slightly greater-than-average allocation. On the other hand, higher education receives 11 percent less than is typical, while health and hospitals receive 33 percent less than is common. Since 1975, higher education's share of the state's budget has declined appreciably, from 10 to 8 percent.

Higher Education Enrollments

Illinois residents rank 12th in the nation in their rates of access to higher education, primarily because of above average enrollment in the state's private colleges and universities. Residents of this state are 6 percent more likely to enroll in higher education than are residents of typical states.

Total enrollment in the state's public institutions is about 8 percent below average. Nearly 27 FTE students per 1000 capita are in public institutions while the U.S. average is 29 per 1,000. The initial rate of attendance by residents is nearly 30 percent above average, but a low retention rate, a tendency toward more part-time study, and low in-migration from other states reduces this initially large enrollment level. On the other hand, the independent sector in Illinois, because of the extensive enrollment of state residents, is 10 percent larger than usual.

Illinois's system of public higher education has a much greater emphasis on 2-year education than do most state systems. More than 47 percent of public students attend these 2-year schools, whereas the traditional share across the United States is 36 percent. A typical proportion attends universities, a smaller proportion attends comprehensive institutions, and there are no public baccalaureate institutions in the state. The private sector in Illinois is fairly similar to typical patterns in its mix of institutions and enrollments.

Institutional Finances and Characteristics

Illinois is characterized as providing a 12 percent below average level of funding to higher education. Also, the public enrollment load in the state is smaller than usual, by 8 percent. As a result, state support, at $2,582 per student, is 4 percent below the U.S. average. However, once again state funding varies considerably by sector. The Urbana campus of the University receives funding at 12 percent above average. Southern Illinois receives 8 percent above average, and eight comprehensive institutions each receive 3 percent above average. Northern Illinois and Chicago Circle combined receive state funds per student that are 5 percent below average, and the single 2-year occupational institution is funded at rates 6 percent below average. The 49 general 2-year schools and the three public health professional institutions are the lowest in relative funding, receiving state dollars at nearly 20 percent below average. Higher tuition revenues in the 2-year sector help to offset this lower level of state funding. Still, the largest institutional sector in the state, the 2-year sector, operates with a total level of E&G funds that is 14 percent below average. In general, tuition revenues in Illinois are 13 percent below average. At the University of Illinois, Urbana campus, they are 25 percent lower than average. As a result, the main campus of the University of Illinois has total E&G funding that equals the U.S. average. Southern Illinois University has a financial posture that is similarly at the average. The comprehensive sector, by contrast, obtains total revenues that are 12 percent above average per student. Northern Illinois University and Chicago State University combined operate with revenues that are 17 percent below average. The health professional institutions operate with funds 21 percent below average. In general, the public institutions in Illinois receive an above average share of funds from state and local appropriations and a lesser share from tuition. Given recent reports of stringency in the state's revenues, one can expect this balance to shift in the future to a greater reliance on tuition.

In the independent sector, revenues are 9 percent above average overall; however, there are considerable differences in funding within the sector. Northwestern University and the University of Chicago combined receive funds that are 11 percent above average; Loyola University is funded at 35 percent below average, and the Illinois Institute of Technology receives 13 percent above average. The four comprehensive institutions operate with 22 percent fewer funds per student than other similar schools. The 32 general baccalaureate colleges are above average by 6 percent and other professional schools are 13 percent above. The 2-year and health professional schools operate with below average funds.

Faculty salaries in Illinois are above average at both public and independent institutions, though increases in recent years show that these public institutions have lost ground generally. At the same time, independent institutions have made major gains, increasing at rates 20 percent above average.

Data Notes

1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded except state-funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here

Postsecondary vocational technical education	$
State boards and commissions	$ 7,262,619
Retirement benefits (including social security)	$ 5,701,200
Fringe benefits	$ 19,482,600
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other Debt service	$ 34,587,900*

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data

Debt service that is part of state and local appropriations to public institutions in the state	$
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$ 3,576,500
—auxiliary enterprises	$ 14,200,000 (estimate)
—other	$ **
Tuition and Fees reappropriated by the state (yes or no)	Yes

Other Comments

*$21,980,800 at the Universities and $12,607,100 at the community colleges. These funds are usually not included in HEGIS reported current funds appropriations.

**Recent debt service for public institutions is co-mingled with other state capital expenditures and cannot be separately identified. Debt service for construction from about 1960 - 1972 can be identified and is included here.

INDIANA

Recent Trends

Although increases in state appropriations between 1975 and 1979 were below national rates, and the numbers of students attending Indiana's public institutions during this period grew faster than elsewhere, the gains in state funding were sufficient to just cover inflation and enrollment growth. Overall, Indiana's public higher education sector experienced a small real dollar improvement in state funding, 2.1 percent per student. However, there were major losses (14.3 percent) in the real dollar value of tuition revenues in Indiana's public sector, causing total E&G revenues per student to fall by 10 percent after adjustment for inflation. Only the two smallest sectors escaped these declines in total funding: the general baccalaureate and the 2-year academic/comprehensive schools, which gained 18.8 and 12 percent respectively. The largest sectors—the universities and comprehensive institutions—all lost about 8.5 percent in the per student purchasing power of their funds.

State Financing of Higher Education

Indiana spends $71 per capita on higher education, a level almost 20 percent below typical state rates. However, the number of students in the public sector is similarly below average. It is worth noting that, since higher education's share of tax funds is a typical one, the below average share of state funds is tied to the below average size of the state's budget.

The vast majority of the state's higher education funds are given to the public sector, as is the case in most other states. Indiana operates a large state student aid program, channeling 25 percent more of its funds to this purpose than is typical. Public institutional support accounts for the traditional share of higher education's budget, 89 percent, and is nearly 20 percent below average, again, only because the state's higher education budget is that much smaller than usual.

State Tax Base and Budget

Indiana has an average tax capacity but a low tax rate. As a consequence, the amount of tax funds collected in 1977 was 17 percent less than is usual. Low income tax rates and a below average utilization of selective sales tax capacity account in major part for the low level of taxes raised in Indiana.

Census data for 1979 show even lower budget levels, nearly 25 percent below average. This budget, based on tax revenues and Federal revenue sharing funds, shows an above average allocation to higher education in contrast to other figures in this study. However, Census figures show that, since 1975, higher education's share has decreased, falling from 13 to 12 percent. Elementary/secondary education, health and hospitals, and highways also receive above average funding. By contrast, public welfare and public services garner smaller budget shares than is typical among states.

Higher Education Enrollments

Residents of Indiana are less likely to enroll in higher education than are residents of other states. For every 100 residents who enroll in other states, fewer than 75 enroll in Indiana. This applies in every category of enrollment, public in-state, private in-state, and out-of-state. Only residents of Arkansas, West Virginia, and the District of Columbia show a lesser disposition to higher education. In total 24 residents per 1000 attend colleges and universities anywhere, in contrast to national access rates of 33 per 1000. However, above average numbers of nonresidents enroll in both the public and private sectors in Indiana, thus raising total enrollment rates to some degree.

The structure of higher education in Indiana is unusual, characterized by a heavy emphasis on university education. In Indiana, 85 percent of all public students are enrolled in universities or comprehensive institutions. Only 57 percent of students across the United States are enrolled in such institutions. Reflective of this emphasis is the fact that 14 percent of all public sector students in Indiana are studying at the graduate level. Traditionally only 8 percent of students are at this level. (Only Iowa enrolls more students at this level.)

Indiana's system of public education, given its emphasis on university and graduate level study, is therefore one of the most expensive public systems to operate. The fact that its institutions are larger than average, though, may provide some counter balance in cost requirements through economies of scale. The state's private sector, in contrast, places a much lesser emphasis on university-level study and a greater focus on comprehensive and baccalaureate education than is typical.

Institutional Finances and Characteristics

On the surface, Indiana's support per student is close to the national average, since both state funding and enrollments are below national norms by similar margins. However, the overall average does not reflect the differences in the categories of public higher education. And the variation in funding per student among these categories of public institutions is considerable. For instance, Purdue receives almost 30 percent less per student than similar institutions elsewhere. The 2-year occupational schools are below national averages by nearly 20 percent, while the specialized schools are below by 32 percent. The remaining sectors are within 10 percent of the average, except for the comprehensive sector, which is funded at rates 25 percent above average.

Funding to public institutions from other sources is striking in Indiana. Tuition revenues are nearly 50 percent above average, gifts nearly 30 percent above, and other sources 25 percent above. As a result, revenues are improved in every sector, with one exception, the specialized institutions. As a result, among the three largest sectors, only Purdue operates with funds below average, by 18 percent.

Faculty salaries in Indiana are below average in both the public and independent sectors, by 3 and 8 percent respectively. The below average rates of salary increases in the public sector since 1975 have contributed to these low levels. A review of salaries by sector, however, is somewhat surprising. Purdue, despite operating with funds that are 18 percent below average, pays its faculty in all three major ranks at rates just above national averages. By contrast, faculty in the same ranks at the other universities and comprehensive institutions are paid salaries approximately 5 percent below average. Thus, Purdue's mix of faculty by rank permits a favorable distribution of salaries.

Data Notes

1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state-funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here.

Postsecondary vocational technical education	$ 590,436 (46,505 FTE Students)
State boards and commissions	$ 979,534
Retirement benefits (including social security)	$ 21,249,600 (estimated)
Fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 1,097,226
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$ 11,255,602*
—auxiliary enterprises	$ 9,069,573**
—other	$ ***
Tuition and Fees reappropriated by the state (yes or no)	No

Other Comments

* Includes $9,106,317 to Indiana University and $2,149,285 to Purdue University

** Includes $4,618,472 to Indiana University and $4,451,101 to Purdue University

*** Indiana makes a special appropriation to each public institution as "fee replacement"--i.e., a dollar sum to replace student fees which are pledged to debt service. These appropriations are very specific at the state level; institutions, however, report them differently under HEGIS. All report fee replacement as current fund revenues "state appropriations"; these are legally unrestricted. However, Indiana Unviersity, for example, does not report dedicated fees as current fund revenue, whereas, other institutions do.

The Commission for Higher Education noted that the classification of public institutions using the NCHEMS procedure differs from the organization used in the State. Purdue University, main campus, with a veterinary school, is classified in Research University, with medical. Indiana University-Purdue University at Indiannapolis is classified as a Comprehensive Institution because this institution did not grant sufficient doctoral degrees in three major discipline areas. Indiana University-Purdue University, Indiannapolis however, does have a very large medical school and hence strongly influences the numbers and indexes for this category of comprehensive institutions. Also, the Commission staff noted that 4 of 13 technical colleges are not included in the HEGIS universe and hence this sector is underrepresented in these reports.

Source: Indiana Commission for Higher Education

IOWA

Recent Trends

The value of state funding improved substantially in Iowa between 1975 and 1979. State appropriations to public institutions of approximately $270 million in 1979, represented a 64.5 percent increase over 1975 levels. This gain was more than one-third better than those experienced in other states. However, the number of students to be supported by these funds grew at almost twice the national rate, expanding 11.5 percent. Still, state funding per student, adjusted for inflation, was nearly 13 percent greater than it had been 4 years earlier. Tuition revenues, after adjustment for inflation, also improved in the public sector (+2.5 percent). These gains in state-generated and tuition revenues created an expanded real dollar base of revenues (larger by 6.9 percent per student) at public institutions in Iowa.

All sectors of public institutions participated in these funding gains. The greatest improvements in real dollar revenues per student were experienced by the academic/comprehensive 2-year institutions, gaining 13.7 percent. The next greatest gain was in the largest sector, which includes the University of Iowa and Iowa State University, where revenues improved by 7 percent in inflation adjusted terms per student. A similar gain, 6.6 percent, was made in the occupational 2-year sector, with the smallest improvement, 4.1 percent, in the public comprehensive sector.

State Financing of Higher Education

Iowa spent $100 per capita to support higher education in 1979, a level 15 percent above average. This high rate of support is the result of a larger-than-average share of the state's budget going to higher education. In acknowledgment of the high percentage of enrollments in independent institutions, Iowa provides large amounts of state student aid to students in private colleges. The state provides the usual budget share in public institutional support, but given the larger size of this state pie, institutional support is 20 percent above average. Iowa provides additional support in the form of funding to vocational-technical education and for its state board.

State Tax Base and Budget

In tax capacity, Iowa is above average to some degree, but it underutilizes this capacity with tax rates that are lower than is typical. As a consequence, the state budget is 6 percent smaller than that of the average state. Iowa's above average capacity to raise taxes is based on high general levels of sales, licenses, farm property, and death and gift transfers. Its tax structure, however, does not capitalize heavily on its broad capacity, but rather on income taxes, which are the primary source of state revenues.

Iowa allocates unusually large shares of its state budget to both highways and higher education, 67 and 44 percent larger than average, respectively. Elementary/secondary education also receives a slightly greater-than-average budget share. Public services and public welfare, by contrast, receive about 27 percent less of the state budget than is generally the case, though each of these functions received more of the state budget in 1979 than they did in 1975. Higher education's portion of state expenditures has not changed since 1975.

Higher Education Enrollments

Although higher education is a major budget priority in the state, residents enroll at rates almost 10 percent below average. Iowans enroll in private in-state institutions in greater-than-average numbers, go to out-of-state institutions in typical numbers, but attend the state's public sector in lower-than-average numbers. The below average attendance rates of residents of Iowa is therefore tied to their lower enrollment at public institutions in the state.

The size of the public sector—relative to the population in the state—is smaller than usual despite factors such as: average rates of first-time enrollment by residents, above average enrollment by nonresidents, and a much greater-than-average number of students enrolled in full-time study. Iowa retention rates, 25 percent below average, are the primary reason for the reduced public sector enrollment. The independent sector, by contrast, is 32 percent larger than usual, with above average numbers of both residents and nonresidents.

Iowa operates a relatively expensive system of public higher education. Over 55 percent of its students are enrolled in research universities, a type of education usually enjoyed by only 18 percent of students nationally. Reflecting this structure, Iowa enrolls more graduate students proportionately than does any other state in the nation, thus contributing further to the expense of its system. Thirty-three percent of the students attend 2-year institutions, and the remaining 12 percent are in a comprehensive institution (University of Northern Iowa).

The independent sector is largely baccalaureate in character, with 66 percent of all independent students in one of 25 such colleges in Iowa. The remaining private students are in comprehensive, 2-year, or professional institutions.

Institutional Finances and Characteristics

With above average state funding to education and a smaller-than-usual number of students, the level of per student state support is 33 percent above average in Iowa's public system. Every type of public institution shares in this profile, with per student funding 7 to 23 percent above average. Revenues from other sources also are above average overall in the public sector, though, again, there are variations by segment. As a result, the research universities are funded just below the U.S. average (index 96). All other segments operate with funds that are between 10 and 50 percent above average.

In the private sector, funding is mixed. The largest segment, the baccalauareate institutions, is funded at levels just above the average. The comprehensive segment is similarly funded. The 2-year institutions, on the other hand, vary in funding, operating at levels between 7 and 50 percent below average.

Faculty salaries at the public research universities and comprehensive institutions are generally within 5 percent below average at the upper ranks. Since 1975, however, salaries at these institutions have improved at above average rates. Faculty at the public 2-year institutions, by contrast, are paid at rates 10 to 15 percent below average and, in the recent past, made smaller gains than faculty in similar institutions elsewhere.

Data Notes

1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state-funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here.

Postsecondary vocational technical education	$ 2,196,676	(1,037 FTE Students)
State boards and commissions	$ 712,797	
Retirement benefits (including social security)	$	
Fringe benefits	$	
Interstate contracts and reciprocity payments	$	
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$	
Centrally administered capital/debt service	$	
Other	$	

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 8,832,059*
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$ 3,748,049
—auxiliary enterprises	$ 7,039,510
—other	$
Tuition and Fees reappropriated by the state (yes or no)	No

KANSAS

Recent Trends

State appropriations in Kansas took a major jump forward between 1975 and 1979, increasing by 75 percent to $244 million. This rate of increase was substantially better than typical rates among the states, ranking Kansas tenth in the nation in gains in this area. Enrollments increased somewhat slower than the norm during this period. As a result, the inflation adjusted value of state dollars improved by 28 percent per student. (Only six other states made greater progress in the value of state support, led by Nevada, Wyoming, Utah, Alabama, New Mexico, and North Dakota.)

These gains in state funding were not evenly distributed across all categories of schools. Kansas State University showed per student improvements of 16 percent in state funding, after adjustment for price changes. The comprehensive and 2-year sectors also had impressive gains in constant dollar per student support from the state, 25 and 42.5 percent respectively. The University of Kansas, however, had a 19 percent loss in such funding. Kansas Technical Institute and the University of Kansas Medical Center also suffered major losses of 9 and 23 percent respectively.

Nor did tuition revenues generally keep up with inflation, though in total, revenues in the public sector improved by 17 percent. At Kansas State, these gains netted a 9 percent constant dollar improvement; the four comprehensive institutions combined gained 18 percent; and at the 20 general 2-year institutions there was a 22 percent gain in the real value of total revenues. During this same period, however, the University of Kansas lost 20.7 percent; Washburn lost 3 percent; Kansas Technical Institute lost 11.7 percent; and the University of Kansas Medical Center lost 23.5 percent in their inflation adjusted revenue base per student.

State Financing of Higher Education

Despite a slightly smaller-than-average state budget, Kansas directs a proportionately greater share of its funds to higher education. At $115 per capita in 1979, higher education received 32 percent more funds than was typical. This high level of support ranked Kansas eighth in the nation in per capita funding of higher education. And of these funds, 98 percent went to support public higher education in the state, including the public vocational-technical sector. Kansas also provides a fairly large amount of student aid to students attending independent institutions in the state, despite the small size of the sector and the fact that it enrolls only about half the number of state residents that is typical for such institutions.

State Tax Base and Budget

Kansas is just above average in tax capacity but 10 percent below average in tax effort. Tax revenues, at $716 per capita, were 8 percent below those in the average state. Kansas ranks among the top 10 states in the nation in tax capacity in licenses, farm and public utilities property, and death and gift transfers. However, none of these sources are predominant sources of tax revenues. Kansas obtains above average tax funds from corporate income and industrial, farm, and utilities property. But the leading sources of state tax revenues remain general and selective sales, individual income, and residential and corporate property taxes.

Higher education and highways are the only two budget categories in the state that receive above average budget shares. Not only does higher education receive 13 percent of the budget, a share 44 percent greater than the norm, but its 1979 share is larger than that provided in 1975, reflecting a growing sense of priority in the state. Highways, by contrast, found its budget reduced substantially, though its share is still more than 50 percent greater than that of other states. These above average shares of the budget come at the expense of public services and public welfare, both of which receive an 18 percent smaller share of a pie that is now 6 percent smaller than average.

Higher Education Enrollments

Residents of Kansas do slightly better than average in rates of attendance in higher education. A lower rate of enrollment at the state's private colleges is more than compensated for by a significant degree of access provided by the state's public institutions. These public colleges show a 16 percent greater enrollment of residents than is generally true.

Enrollments in the public sector are 25 percent above average, enrolling 36 FTE students per 1,000 capita. These enrollments result from the following factors: 12 percent greater first-time enrollment of residents, twice as many nonresidents, and somewhat greater full-time study patterns. By contrast, the independent sector in Kansas is substantially below norms in both resident and nonresident enrollments.

Kansas's system of public higher education is relatively more expensive in character than that of the typical state. Its large enrollment places a heavy emphasis on university level education and graduate study, which are generally more expensive. In addition, the average size of a public institution in the state is 30 percent smaller than usual, creating further cost conditions.

Institutional Finances and Characteristics

Per capita state funding to the public sector is 35 percent above average, while enrollments are 25 percent above average. Although this combination creates a level of per student state support that is 8 percent greater than the mean, the structure of higher education in the state dilutes these funds. Despite recent improvements in state funding, Kansas State still receives 23 percent less per student than other similar institutions. The University of Kansas and four comprehensive institutions receive per student appropriations that are just below national averages. And Washburn receives only 43 percent as much as such schools generally obtain in state appropriations. On the other hand, the 2-year institutions appear to be particularly well funded by the state, and the University of Kansas's Medical Center is just above average in state support. These patterns are generally repeated in the total revenue profiles of these schools. In conclusion, then, large state contributions to higher education are clearly minimized by a large student population, concentrated in relatively expensive forms of education.

Faculty salaries are below average at both public and private institutions. In the public sector, no category of faculty is paid at or above the average, despite major increases in salary between 1975 and 1979.

Data Notes

1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here.

Postsecondary vocational technical education	$ 18,060,832	(6,800 FTE Students)
State boards and commissions	$ 694,518	
Retirement benefits (including social security)	$	
Fringe benefits	$	
Interstate contracts and reciprocity payments	$	
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$	
Centrally administered capital/debt service	$	
Other	$	

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 4,412,135
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$ 2,398,164
—auxiliary enterprises	$ 6,085,320
—other	$

Tuition and Fees reappropriated by the state (yes or no) Yes

KENTUCKY

Recent Trends

Kentucky made major strides in its support of higher education between 1975 and 1979. Appropriations gains of 68 percent were more than sufficient to accommodate both a major increase in enrollments of 10.2 percent and inflation. As a result, the constant dollar value of state appropriations improved by 16.7 percent per student in the public sector.

It is particularly notable that all segments shared in these gains, with improvements ranging from 10 percent at the University of Kentucky to over 40 percent at the public baccalaureate institutions. However, tuition revenues, even when adjusted for inflation and enrollments, took a nosedive in this period, decreasing by 16 percent. Still, fueled by the increase in state funding, total E&G revenues grew by nearly 10 percent in the public sector, even after adjustment for price shifts. Except for the community college system and the comprehensive institutions, which showed little change in real dollar funding, these gains permeated almost every segment of the public sector. The University of Kentucky gained 10 percent, the University of Louisville improved by 16 percent, and the baccalaureates—Kentucky State University and Northern Kentucky University—showed increases of 37 percent.

State Financing of Higher Education

Kentucky spent $86 per capita in 1979 for higher education, a level equivalent to the national average. This level of support however, is remarkable, given that the state's budget is 30 percent smaller than is typical. Therefore, achieving the average level of state support for higher education required an extraordinary share of the state's budget. Almost all of these funds ($82 out of the $86 pot) are funneled to public institutions. A small amount supports student aid in both the public and private sectors and provides indirect support to the public sector in the form of state retirement benefits and central functions (e.g., computer services).

State Tax Base and Budget

Kentucky is below average in both its capacity to raise taxes and its willingness to do so. As a result, tax revenues collected in 1977 were almost 30 percent less than those collected in the average state. (In this regard, only five other states had fewer funds to finance public programs: Alabama, Arkansas, Mississippi, South Carolina, and Tennessee.) Kentucky has above average capacity in some tax categories: selective sales, farm property, and severance taxes. Its tax effort, however, is above standard only in individual income, death and gift transfers, and severance taxes.

Higher education and highways were both accorded a preferred budget share in Kentucky, when compared to the budgets of other states. Although no other category of state government did better than average, all were within 10 percent of the average in their slice of the state pie. All, that is, except health and hospitals, which received about half the typical budget proportion. Although higher education is clearly a preferred state activity, its share of the state budget has declined somewhat since 1975.

Higher Education Enrollments

By national standards, Kentucky, with only 25 per 1,000 residents enrolled in higher education, is a low access state. The national average is 33 per 1,000. This low enrollment is evident in every category, in-state public and private institutions as well as out-of-state schools. (This poor enrollment pattern is worse in only six other states or localities: District of Columbia, West Virginia, Arkansas, Indiana, Georgia, and Maine.)

Enrollment levels in public institutions in Kentucky are 16 percent below average, primarily because of low first-time enrollments by state residents. However, above average nonresident enrollment, high retention rates, and large numbers of full-time students compensate to some degree and improve enrollment levels in the public sector.

Kentucky's public system, while smaller than average in size, is significantly more university/comprehensive oriented and therefore more graduate in character than is traditionally the case. This structure contributes to the financial requirements of the state's public higher education system.

Institutional Finances and Characteristics

Kentucky provides 6 percent above average state funding to support 16 percent fewer students than is typical. This combination of above average funding distributed among a smaller pool of students creates a favorable per student funding profile. Kentucky provided $3405 per student in 1979, a level 26 percent above average. This funding level was sufficient even to accommodate the state's more expensive structure of education. Every category of public institution is funded by the state, and in total, at rates that are 10 to 35 percent above the average for similar classes of schools. Only the 2-year sector differs from this general profile, and to a significant degree. Though the 2-year sector is relatively small, representing only 13 percent of the state's public students, it is funded at rates that are approximately 30 percent below the average for such schools.

Despite substantially above average funding levels, Kentucky's faculty is underpaid, in comparison to other states, on average by 9 percent. Recent rates of increase in faculty salaries have been close to, though still under, the national mean.

Data Notes

1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state-funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here.

Postsecondary vocational technical education	$ *
State boards and commissions	$ 1,531,300
Retirement benefits (including social security)	$ 6,111,546
Fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$ 1,290,800
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$19,223,124
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$
—auxiliary enterprises	$ 7,260,373
—other	$
Tuition and Fees reappropriated by the state (yes or no)	No

Other Comments

* Kentucky's vocational-technical schools have programs for secondary and postsecondary students. The costs and enrollments of postsecondary component are not separately identifiable.

$350,000 for Consortia were allocated to the campuses.

LOUISIANA

Recent Trends

Increases in state appropriations between 1975 and 1979 were outstripped by enrollment growth and inflation. The 31 percent gain in state funding was not sufficient to accommodate 6.2 percent more students plus the high price increases in the period. As a result, the value of state funding fell by 5.7 percent overall.

State treatment varied among the different segments. Major losses in state support, around 33 percent, occurred at both Louisiana State University and the general 2-year campuses. The largest sector in the state, the comprehensives, experienced a small loss of 2.4 percent per student in the purchasing power of state monies. The public baccalaureates, the 2-year occupational schools, and the Louisiana State Medical Center all saw improvements in constant dollar state funding, 11 percent, 34 percent, and 10 percent respectively.

There were overall improvements in the real dollar value of tuition revenues of 20 percent. Still, total E&G revenues declined in the public sector by 1.4 percent, and at Lousiana State University and the small 2-year schools by 31 percent. All other sectors gained against inflation and enrollment shifts, though to different degrees.

State Financing of Higher Education

Louisiana spent $70 per capita on higher education in 1979. This rate of support is 20 percent below average, though it represents the usual share of state tax funds allocated to higher education. Stated differently, higher education support in the state is below average because the size of the total state budget is 21 percent smaller than usual. The vast share of these higher education funds are channeled to the public sector, primarily to support public institutions, including the state's postsecondary vocational schools. There is a small amount of state student aid, but in relative terms it is inconsequential.

State Tax Base and Budget

Louisiana has above average tax capacity but is extremely reluctant to tap this inherent wealth. Tax revenues in the state are therefore far below expected levels, given the state's scale of economic activity. Louisiana's tax potential is based on high corporate income, commercial and industrial property, public utilities property and minerals extraction related revenues (i.e., severance taxes). Louisiana's tax structure, however, emphasizes severance and general sales taxes, and nearly 55 percent of the state's tax revenues emanate from these two sources.

The state's budget priorities include highways and health and hospitals, the two public functions that receive above average shares of state expenditures. Public welfare is the only function that receives an unusually small share of the budget, though that has improved since 1975. Higher education receives a typical share of the state's budget, which is an improvement over 1975 allocations that were 11 percent below average.

Higher Education Enrollments

Louisiana residents appear to under enroll in higher education. Yet, when the 53,000 FTE students in postsecondary vocational schools are considered, the residents then appear to enroll in higher education at above average rates, and almost exclusively through attendance at the state's public institutions.

In the past, postscondary vocational education enrollments were not included uniformly within Federal higher education reporting systems. Therefore, the remaining analysis in this report does not include these enrollments or the finances associated with them. Therefore, the reader's conclusions should be tempered by awareness of this oversight.

The public sector in Louisiana is about 5 percent smaller than average because of lower-than-average enrollment rates by both state residents and nonresidents. An above average tendency to full-time study increases enrollments somewhat, but not enough to equal the average.

Louisiana's system of higher education is primarily oriented toward the comprehensive sector, and 64 percent of public students are enrolled in one of the state's 10 such institutions. The 2-year segment appears to be unusually small, but this is explained in part by the exclusion of information about the postsecondary vocational schools. The independent sector is heavily graduate in focus, with 62 percent of its students in either a research university or a comprehensive institution. The independent sector in Louisiana is very small, however, about half the typical size.

Institutional Finances and Characteristics

Public institutions in Louisiana function with below average funding in every sector. To start with, state funding per student is 17 percent below the U.S. average. Compounding this low support rate, revenues from every other source are below average, and in some cases substantially so. As a result, every sector receives between 10 and 40 percent fewer than average dollars per student with which to provide higher education. Specifically, the two large sectors, the university and comprehensive institutions, receive 39 and 24 percent fewer funds respectively than similar schools elsewhere.

Despite this low funding, faculty salaries at Louisiana State University are at the U.S. average for the upper ranks. At all other public institutions in the state, such salaries are below average, despite substantial improvements between 1975 and 1979.

Data Notes

1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state-funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here

Postsecondary vocational technical education	$	26,199,913	(53,307 FTE Students)
State boards and commissions	$	3,575,503	
Retirement benefits (including social security)	$		
Fringe benefits	$		
Interstate contracts and reciprocity payments	$	304,120	
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$		
Centrally administered capital/debt service	$		
Other	$		

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data

Debt service that is part of state and local appropriations to public institutions in the state	$	504,365
Current Funds revenues dedicated to capital purposes:		
—tuition and fees	$	2,805,223
—auxiliary enterprises	$	6,907,355
—other	$	

Tuition and Fees reappropriated by the state (yes or no) No

Other Comments

The public FTE enrollment figure of 107,394 was thought to be too low in the judgement of the Louisiana Board of Regents.

MAINE

Recent Trends

Between 1975 and 1979, Maine's state appropriations for public higher education increased by only 14.9 percent, approximately one-third the national average. Only New York made lesser gains in state funding. This low rate of growth in state funding was probably tied, in part, to the 2.9 percent decline in public sector enrollments. Yet, given the inflation rate in the period, state support in constant dollars per student still dropped 9.5 percent.

The University of Maine at Orono was particularly hard hit, the purchasing power of its state dollars having dropped 37.7 percent. The value of state funds allocated to the public 2-year occupational schools also was eroded, with a 19.3 percent decline in state appropriations per student, adjusted for inflation. The University of Maine's comprehensive institution (Portland-Gorham), its two baccalaureate schools (Presque Isle and Fort Kent), and the four specialized institutions showed gains in state funding sufficient to cover enrollment shifts and inflation.

Although constant dollar state funding for higher education represented a mixed portfolio, tuition, by contrast, surged ahead at a rate nearly seven times the national pattern. Overall, tuition revenues, adjusted for inflation and enrollments, improved by 20.9 percent. Every class of public institution shared in this gain except the vocational-technical institutes, where constant dollar tuition per student fell slightly, by 1.4 percent.

As a result of these gains in tuition, the total revenue profile of Maine's public institutions showed a 2.2 percent gain against inflation, between 1975 and 1979. Only one sector did not show improvement, the University of Maine at Orono. That institution experienced a loss of 16.9 percent in its total purchasing power per student.

The independent institutions in Maine had differing financial experiences in this period. The baccalaureate colleges (the primary independent sector) lost 4 percent per student in the value of their E&G revenues. The other sectors (the 2-year occupational schools and the specialized institutions) made gains of 21.5 percent and 5.5 percent respectively in their constant dollar funds.

State Financing of Higher Education

Maine spent $48 per capita in 1979 for higher education, an amount that is 44 percent below the U.S. average and lower in only one other state, New Hampshire. This low level of support is in part tied to the state's low tax revenues—17 percent below average—but is also due to the fact that higher education gets a smaller-than-average share of this smaller-than-average pie. Maine provides a typical share of its higher education budget to state student aid, with the remainder largely going to institutional support, including vocational-technical institutions not covered by the bulk of this analysis (i.e., those institutions that are not part of the Federal higher education reporting system).

State Tax Bases and Budget

Maine is among the poorest states in the nation in its inherent capacity to raise tax revenues. Only Mississippi, South Carolina, Alabama, and Arkansas have less intrinsic capacity to collect tax revenues. Maine taxes it capacity at rates that match the typical state, but because of its low capacity, its tax revenues are 17 percent below average. Maine's low tax capacity is evident in almost every major category, with residential property and licenses being the only two categories in which the state exceeds the average. Maine's tax structure emphasizes sales taxes, corporate income taxes, and property taxes.

Maine's highways and public welfare have high priority in state spending and so receive above average shares of the state's budget. Health and hospitals, by contrast, receive the smallest share, only 4 percent of the budget—a share that is 56 percent smaller than average. Higher education is next lowest in priority, receiving 7.5 percent of the budget, again a smaller-than-average share. This share for higher education has not changed since 1975.

Higher Education Enrollment

Maine residents are among the least likely in the United States to enroll in higher education. Despite the fact that a relatively large number of Maine residents go out of state for their college education, total access rates are about one-quarter lower than usual in both the public and independent sectors.

The first-time enrollment of Maine residents at public institutions in the state is about half the level of other states. The enrollment of more-than-average numbers of nonresidents, high retention rates, and above average rates of full-time study compensate to some degree. But enrollment at public institutions is still far below average (index 72). In the private sector, however, given its large number of nonresidents, enrollments are close to national levels.

Maine's public system of higher education places a heavy emphasis on university education, with 43 percent of the students attending the Orono campus of the University. Two-year institutions make up a very small part of the system, accounting for only 6.7 percent of the total student population. In the private sector, the majority of students, 66 percent, are in one of the eight baccalaureate schools. Other specialized institutions account for 26 percent of the students, with the remaining 8 percent in 2-year schools. Overall, 31 percent of the state's students attend independent institutions, a proportion 25 percent greater than average.

Institutional Finances and Characteristics

Maine is below average not only in its funding of higher education, but also in the enrollment load it must support. Because appropriations are proportionately lower than enrollments, the level of state funding per student is below average. Maine provides $1953 per student in state support to public institutions, index 73. Yet, because other funding sources exceed national rates of support, the public sector receives revenues that are much closer to average than expected, and the funding index rises to 94. Funding varies by category of institution, but all sectors are within 12 percent of the U.S. average, if not above it. The largest sector, the university sector, is the least well funded and operates with revenues 12 percent below average on a per student basis.

The independent sectors vary in their rates of support. The largest sector, the baccalaureates, has revenues 43 percent greater per student than similar private colleges elsewhere.

Except for the private baccalaureates, faculty salaries are uniformly below average in all sectors, with faculty at public institutions receiving 16 percent less than their counterparts in other states. These low pay scales reflect in part the low rates of increase between 1975 and 1979, when salaries increased at rates 30 percent slower than elsewhere.

Data Notes

1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded except state funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here

Postsecondary vocational technical education	$ 5,857,347	(3,151 FTE Students)
State boards and commissions	$ 25,000	
Retirement benefits (including social security)	$	
Fringe benefits	$	
Interstate contracts and reciprocity payments	$	
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$	
Centrally administered capital/debt service	$	
Other New England College of Osteopathic Medicine, one time funding for start-up costs.	$ 250,000	

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data

Debt service that is part of state and local appropriations to public institutions in the state	$
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$
—auxiliary enterprises	$ 1,416,457
—other	$
Tuition and Fees reappropriated by the state (yes or no)	*

Other Comments

* Tuition and fees are not reappropriated for the University of Maine or the Maine Maritime Academy, but they are for the VTI's.

Source: University of Maine

MARYLAND

Recent Trends

Between 1975 and 1979, state higher education appropriations increased by 46 percent in Maryland, a rate that nearly mirrored U.S. trends. Enrollments increased at slightly above average rates, with the student pool expanding by 6.3 percent. Nevertheless, the improvements in state funding were sufficient to cover enrollment growth and inflation, and to provide a 5 percent real dollar gain per student. This gain in state funding was generally shared throughout the public sector, with the exception of the 2-year occupational schools and the health professional institution, University of Maryland-Baltimore Professional Schools.

Tuition revenues in the public sector did not keep pace with inflation and enrollments, falling by 3.6 percent in real dollar terms. However, given increases in state funding and other revenues, most of the public sector did have an overall gain of 3.5 percent in total E&G revenues per student, after adjustment for inflation. The College Park Campus of the University of Maryland and the 2-year schools did not participate in these gains and had per student revenue declines of 4.5 percent at the University, 8 percent at the general 2-year schools, and 2.9 percent at the 2-year occupational schools.

The independent sector managed a major gain in support levels, with adjusted revenues per student rising by 15 percent. Most notable is the fact that all segments among the independent institutions saw some improvement in the purchasing power of their funds.

State Financing of Higher Education

Higher education receives a smaller share of the state's budget than is typical and, as a result, per capita support at $77 is 12 percent below average. However, an above average share of these reduced funds is channeled to support public institutions in the state. And the state also provides some student aid to both sectors as well as some direct appropriations to independent institutions. The support given the independent sector is somewhat surprising considering the small size of the sector and its low enrollment of residents.

State Tax Base and Budget

Maryland has a typically sized tax base on which to draw, with particular strengths in high individual income and residential property. The state makes an above average effort to tax this capacity, exerting the 13th greatest tax effort in the country. Its tax structure places major emphasis on individual and corporate income taxes as well as on selective sales taxes. The resulting pool of tax revenues in 1977 was $830 per capita, a level 6 percent better than the average state.

Census figures for 1979 suggest that higher education's share of the state budget is equivalent to that of the typical state, a somewhat different profile than indicated when referencing tax revenues alone (which do not include Federal revenue sharing funds). In Maryland, only the miscellaneous category "other" has an above average share of the state budget. Higher education, elementary/secondary education, and public services are provided average shares whereas all other functions receive smaller-than-average shares. Higher education's share of the state budget has not changed since 1975.

Higher Education Enrollments

Maryland residents enroll in higher education at rates just below the U.S. average, 31 residents per 1000 in contrast to the national average of 33 per 1000. The result is an index of 94 for Maryland. This lower access level is tied to below average rates of attendance by residents at the state's private institutions, while an above average number (by 50 percent) go out of state in pursuit of higher education. The public institutions, on the other hand, enroll the typical number of residents.

First-time resident enrollment at Maryland's public institutions is 25 percent greater than average. Also, attendance by nonresidents exceeds that of most public systems by 42 percent. However, these above-average-enrollment rates are diminished by a low retention rate and by the enrollment of more part-time students than is usual. Total FTE enrollment in the public sector is at average levels, and 30 FTE students per 1,000 capita matriculate in public institutions. By contrast, the private sector in Maryland is 45 percent smaller than it is in the average state.

Unlike typical structures, Maryland's public higher education system is somewhat less oriented to university level studies and provides more emphasis on baccalaureate schools. Therefore, the overall costliness of the system, in broad terms, is likely to be less than it would be with the typical configuration of enrollments.

Institutional Finances and Characteristics

Because public enrollment levels are somewhat above average and state funding is somewhat below average, state appropriations per student are 9 percent below national rates. The funding of individual groups of public institutions, however, is more varied. For instance, the College Park campus is, on a relative basis, substantially underfunded by the state, receiving 25 percent less than similar schools elsewhere. The 2-year occupational schools receive below average support to a similar degree (indexed at 77). For the health professional school, the funding profile is even worse, with the state providing 44 percent less than the average per student. The public comprehensive and general baccalaureate institutions are also below average in per student state support, by 12 percent and 9 percent, respectively. Only the 17 general 2-year institutions receive near average funding (index 102).

Maryland's tuition revenues per student are almost 50 percent greater than those of typical public institutions and are sufficient to improve the position of total E&G revenues in every sector except College Park. In total revenues (excluding grants and contracts), three segments operate with above average funding (the baccalaureates, the general 2-year schools, and the specialized institutions), two segments are within 7 percent of the average (the comprehensives and the 2-year occupational schools), leaving only two public segments substantially below average in funding levels (College Park, indexed at 74, and the Baltimore Professional Schools, indexed at 62).

Faculty salaries overall in the public sector are very close to national levels, and in some quarters are far better. At College Park, the upper ranks are nearly average. In every other sector, upper-rank faculty are at or above average, except at the health professional schools where full professors are one category of faculty that are paid below average (by 6 percent). Salary increases between 1975 and 1979 in Maryland's public sector have matched national pay trends.

Data Notes

1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state-funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here

Postsecondary vocational technical education	$
State boards and commissions	$ 2,632,066
Retirement benefits (including social security)	$ *
Fringe benefits	$ *
Interstate contracts and reciprocity payments	$ 987,519
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$ 20,000,000 (estimated)**
Other Deferred maintenance at state universities and colleges	$ 1,409,050

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data

Debt service that is part of state and local appropriations to public institutions in the state	$
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$
—auxiliary enterprises	$ 1,310,000
—other	$
Tuition and Fees reappropriated by the state (yes or no)	Yes

Other Comments

** The State finances all of the non-auxiliary facilities at the public four-year institutions, a minimum of 50 percent of the cost at the community colleges, and selectively contributes up to 50 percent of the institution costs for non-auxiliary facilities at state aided independent institutions. The State pays all debt service for these facilities centrally.

* All fringe benefit payments for Social Security and State retirement systems for the four-year public institutions and the community colleges are paid centrally by the State Department of Personnel. In addition, health insurance payments for employees of the public four-year institutions are paide by the Department of Personnel. Only contributions for TIAA-CREF are included in institutional budgets.

MASSACHUSETTS

Recent Trends

The real dollar value of state funding for higher education in Massachusetts fell by 1 percent between 1975 and 1979. The 33.5 percent increase in state appropriations was not enough to cover both enrollment gains of 3.2 percent and inflation. Changes in state funding, however, varied for the different categories of public institutions. For instance, major gains in the constant dollar level of state support per student occurred at the University of Massachusetts Medical School in Worcester at 92 percent and at the three occupational 2-year schools at 30 percent. At the other end of the spectrum, the Amherst campus of the University found the per student purchasing power of its state monies decreasing by 8 percent; and declines at the specialized institutions were at 11 percent. The two public baccalaureate schools and the fifteen general 2-year campuses found the value of their state funding slipping somewhat, by 1.3 percent and 3.9 percent, respectively. The eight comprehensive institutions saw little change in the real dollar value of their appropriations.

Tuition revenues in Massachusetts' public sector also declined after adjustment for inflation and enrollment changes, by 3.1 percent. As a consequence of the two decreases in key revenue sources—appropriations and tuition—public institutions in Massachusetts experienced a 2.2 percent shrinkage overall (excluding government contracts) in total purchasing power per student. However, performance again varied by class of institution. The overall declines in funds in the public sector were reflected in losses for these specific groups of institutions: University of Massachusetts-Amherst lost 10.8 percent, the baccalaureates lost 8.9 percent, and the general 2-year campuses lost 5.2 percent. All other categories of public institutions bucked the general pattern and showed real dollar gains in total E&G revenues during this same 1975 to 1979 period.

The independent sector in Massachusetts also showed financial improvements during this period, with gains of 5.3 percent in constant dollar E&G revenues per student.

State Financing of Higher Education

Despite a very large pool of tax revenues, Massachusetts directs a below average share of funds to higher education support. As a result, per capita funding of higher education at $61 is 30 percent below rates typically provided by states. Only four states—New Hampshire, Maine, Pennsylvania, and New Jersey—spend less per capita on higher education than Massachusetts.

The state apportions a smaller-than-typical share of these higher education funds to the public institutions in the state: only 79 percent. A large share, 6 percent, funds state student aid, primarily those students at independent institutions. The remaining 16 percent is allocated to public postsecondary vocational institutions, which are not represented in the Federal higher education reporting universe.

State Tax Base and Budget

Massachusetts overcomes its low inherent wealth through a massive tax effort, collecting tax revenues that are 24 percent greater than the typical state. (Only New York has higher tax rates than Massachusetts.) Massachusetts is below average in its capacity to raise taxes in every category but one, residential property. Despite this low capacity, the state's tax effort is above average in eight of the 11 categories shown here. In property taxes of all types—residential, commercial, farm, and public utilities—Massachusetts is highest in the nation in tax rates. The state ranks second in the United States in its corporate income taxes and 11th in personal income taxes. Over 60 percent of its tax revenues come from these sources.

Although Massachusetts' budget is substantially larger than that of the typical state, higher education receives the lowest relative share of the budget accorded any public function in the state. In 1979, for instance, only 4.3 percent of the state's expenditures went for higher education, down from 5 percent in 1975 and less than half the portion usually funneled to higher education in other states. Highways and health and hospitals also received low shares of the state's budget. On the other hand, public welfare, "other" functions, and elementary/secondary education received greater-than-usual portions of the state's budget.

Higher Education Enrollments

Massachusetts residents show a tremendous disposition toward higher education. Thirty-nine of every 1,000 Massachusetts citizens are matriculating, and the national average rate is 33 per 1,000. Only residents of California are more likely to be enrolled at a college or university. And in contrast to California, where the public system of higher education supports access, Massachusetts residents gain above average enrollment in higher education through the state's independent institutions and by enrolling outside the state. The high rate of access to these schools is sufficient to compensate for the below average registration in the state's public institutions, which enroll 20 percent fewer residents than is usual.

Because nonresidents are also less likely than average to select public institutions in Massachusetts, total FTE enrollment in the public sector is 27 percent below average (21 FTE students per 1000 capita). Almost 60 percent of the state's students are at independent institutions. Only the District of Columbia enrolls a greater proportion of its residents in private schools. A below average share of public enrollments in Massachusetts are at the University, and an above average share are at comprehensive institutions. In the private sector, the opposite situation prevails, with more than half the students at universities. This focus on university-level studies in the private sector is twice the usual level.

Institutional Finances and Characteristics

State funding of public higher education and student enrollment in the public sector are both below rates typical in most states. And because state funding is even smaller than the student base (in relative terms), per student appropriations are 16 percent below the U.S. average.

Distribution of these funds differs markedly by type of institution. The Amherst campus and Medical School of the University both receive above average support (indexed at 140 and 174, respectively). The two public baccalaureate institutions, Worcester State and University of Massachusetts, Boston, together receive state appropriations that are 17 percent above average. The remaining sectors, including the two largest ones—the comprehensive and 2-year institutions—receive state appropriations that are 15 to 30 percent below average.

Revenues from other sources (e.g., tuition, gifts) are also below national norms. As a result, when total E&G revenues are referenced, the index measure associated with state appropriations for public institutions declines in almost every case. Despite these lower revenues, however, two segments are funded at above average rates: the University of Massachusetts at Amherst and the Medical School. The public baccalaureates, on the other hand, are funded at just-below-average rates, while all other categories operate at even lower rates.

Independent institutions in Massachusetts are well funded, and only one category, the universities (without medical), operates with revenues that are below levels at comparable institutions elsewhere.

Faculty salaries, except for the public 2-year schools and specialized institutions, are at or above average in both the public and private sectors. Faculty at private institutions are paid on average 13 percent more than their counterparts elsewhere. And although salaries at public institutions in Massachusetts are generally at or above the average, salary increases between 1975 and 1979 were far below typical pay raises for U.S. faculty.

Data Notes

1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state-funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here.

Postsecondary vocational technical education	$ 51,915,000	(27,878 FTE Students)
State boards and commissions	$ 2,705,000	
Retirement benefits (including social security)	$	
Fringe benefits	$	
Interstate contracts and reciprocity payments	$	
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$	
Centrally administered capital/debt service	$	
Other	$	

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 157,014,000
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$
—auxiliary enterprises	$
—other	$

Tuition and Fees reappropriated by the state (yes or no) Yes

Other Comments

The index for percent change in state and local appropriations to the independent sector is denoted in asterisks because the index was so large.

MICHIGAN

Recent Trends

Although state appropriations for higher education in Michigan increased at lesser rates than the general U.S. trend between 1975 and 1979, the 36 percent gain, after adjustment for inflation, translated into a .5 percent improvement in the purchasing power of state monies. During this time, there was an increase of 3.5 percent in public enrollments.

Most of Michigan's public institutions also saw improvement in their constant dollar tuition revenues. Fueled by real dollar increases in both state appropriations and tuition, total E&G revenues per student did manage to increase faster than inflation, netting 2.8 percent more in adjusted funding. All categories of public institutions shared in these funding increases except Western Michigan University, which experienced a 1 percent slippage in constant dollar revenues per student. Revenues at the research universities (the University of Michigan and Michigan State) improved 4.6 percent, while those at Wayne State surged ahead by 10.6 percent. The four 2-year occupational institutions in Michigan had increases of even greater magnitude, 11.8 percent. The other 2-year schools had real funding improvements of 2.9 percent. Gains at the public comprehensive and baccalaureate schools were between 1 and 2 percent.

State Financing of Higher Education

Michigan's per capita contribution to higher education is closely in line with typical U.S. rates. Although the state's total budget is above average, higher education's slice of that budget is somewhat smaller than usual, resulting in average per capita support to higher education. Michigan provides a small amount of institutional support to independent institutions, while public institutions receive the vast majority of these higher education funds and are supported at levels 4 percent greater than the U.S. average. In addition, 4 percent of the state's higher education budget provides student aid in both the public and independent sectors.

State Tax Base and Budget

Michigan has a somewhat stronger than average tax base and is more willing to tap that capacity than is the average state. With this above average capacity and effort, the state collects 11 percent more in tax revenues than the typical state. Michigan's above average tax capacity is particularly associated with its high individual and corporate incomes and its commercial property. Its tax structure heavily emphasizes both income and property taxes, which, combined, account for nearly 70 percent of total tax revenues collected.

Statistics collected in the Census of Governments indicate that higher education is a favored state function in Michigan and receives an above average share of the state's budget. This contradicts the profile depicted by tax revenues alone, which suggests that higher education receives a below average share of the state's budget. Census figures indicate that public welfare, public services, and elementary/secondary education also receive larger budget shares than are typically accorded these functions. Highways and the "other" category obtain smaller relative shares. Higher education's budget portion has not changed since 1975.

Higher Education Enrollments

Residents of Michigan are somewhat more likely to pursue higher education than are residents of other states (index 103). The public sector enrolls 16 percent more residents than is typical. This high enrollment of residents in the public sector more than compensates for the below average registration of residents at private colleges in the state and at institutions outside Michigan.

Reflecting this large resident enrollment, Michigan's public institutions enroll 12 percent more students per 1000 capita than does the average public system. By contrast, the independent sector in Michigan is only 60 percent as large as is generally the case.

Michigan's students are more likely to be enrolled in a university. Almost 40 percent of Michigan's public students are studying at one of the four universities in the state. Generally, only 31 percent of students receive this type of education. Eleven percent of all students are involved in graduate studies, a rate 34 percent greater than the mean. Michigan's focus on university education and graduate study creates a relatively more expensive combination of education to support.

Institutional Finances and Characteristics

Because public enrollment levels are somewhat greater than state appropriations, state support per student is 6 percent below average. However, income from tuition and private gifts is 50 percent greater than average, causing total E&G revenues per student (excluding government contracts) to exceed the average by 5 percent.

Four of Michigan's seven categories of public institutions operate with above average funds. The two research universities are funded at levels 4 percent below those of similar institutions in other states. Western Michigan is 12 percent below average and the four 2-year occupational schools are 26 percent below norms in total E&G funding per student. Michigan's public institutions do very well in government grants and contracts, exceeding average levels by 19 percent.

Public sector faculty salaries in general are 7 percent better than average and are below average only at Western Michigan. However, salary increases between 1975 and 1979 have lagged behind national rates.

Data Notes

1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state-funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here.

Postsecondary vocational technical education	$	
State boards and commissions	$	114,106
Retirement benefits (including social security)	$	
Fringe benefits	$	
Interstate contracts and reciprocity payments	$	
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$	
Centrally administered capital/debt service	$	
Other	$	

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$
—auxiliary enterprises	$
—other	$
Tuition and Fees reappropriated by the state (yes or no)	No

MINNESOTA

Recent Trends

Public higher education in Minnesota received a 54.6 percent increase in state appropriations between 1975 and 1979, a 14 percent better-than-average gain. Although this increase in state support was partly consumed by an enrollment growth of 8.6 percent, public institutions still experienced an improvement of nearly 9 percent, in inflation adjusted dollars per student. The two largest sectors, the research university and the comprehensive institution, participated in these gains, while the 2-year sector saw its state and total funding support eroded by inflation and very large enrollment increases.

The real dollar value of tuition in Minnesota in this period was level overall, though it varied by sector. In terms of total E&G revenues, there was a lesser though still real 6.1 percent gain in funds per student for higher education. The greatest improvement was at the University of Minnesota, Minneapolis, where funds per student increased by nearly 14 percent in real dollar terms over the 4-year period. The public baccalaureate sector also fared well in terms of funds per student, gaining 9.5 percent even after adjustment for inflation. Part of the improvements in this sector resulted from enrollment decreases of 5 percent, which meant a smaller pool of students to support. The public comprehensive institutions were nearly level in real dollar revenues per student, while the public 2-year schools showed declines between 13.3 and 3.3 percent. These declines were related to a large extent to substantially increased student enrollments in this sector.

In the independent sector in Minnesota, there were small losses in higher education funding after adjustment for inflation and enrollment shifts. Increases in tuition and other funds were outweighed by the nearly 16 percent increase in students and by inflation. As a consequence, real-dollar-per-student revenues declined by 1 percent in the private sector.

State Financing of Higher Education

In 1979, Minnesota provided $106 per capita to support higher education, an amount 22 percent above average. This level of funding included nearly $300 million for public institutions, $77 million for public vocational-technical institutions, nearly $2 million for private institutions, nearly $21 million for student aid, and $23.5 million for other higher education support, including state boards, retirement benefits, reciprocity arrangements with other states, and other state services.

Despite average tax capacity, the state's revenues are approximately 11 percent above average because of a comparatively high tax effort. In addition, a large share of this large state pie is channeled to higher education. Although state support for higher education is 22 percent above average, state support to public institutions is slightly below average. The remaining state funds support an above-average student aid program and a very large "other" category, principally vocational education.

State Tax Base and Budget

Minnesota ranks close to average in generally taxable activities. However, the state taxes this capacity at above average rates, thus yielding tax revenues that are 11 percent greater than typical. Minnesota relies very heavily on income taxes for its revenues, ranking fifth in corporate income tax rates and sixth in personal income tax rates. The state's tax structure also emphasizes selective sales taxes, severance taxes, and death and gift taxes.

Census Bureau figures indicate that both higher education and elementary/secondary education were receiving smaller shares of the state budget in 1979 than in 1975. Higher education's share, though still average at 9.2 percent, was down noticeably from its 11 percent budget portion in 1975. For elementary/secondary education the reduction went from 30 percent to 27 percent. State services that gained budget shares included highways, public welfare, public services, and hospitals.

Higher Education Enrollments

Because the primary data source used in this study does not include the postsecondary vocational institutions, access in Minnesota is understated in this report but is depicted as being close to the national average. However, once the 31,000 FTE students attending postsecondary vocational technical schools in Minnesota are included, Minnesota's participation rate for state residents climbs to fifth place. As a consequence, enrollment of state residents at public institutions in the state is nearly 30 percent above average, while typical numbers of Minnesotans attend private schools in the state and go out of state for higher education. Thus, the net profile for residents of the state shows strong participation in higher education. This composite picture contradicts the stated findings of the analysis, which depict average rates of access.

Minnesota's public students are concentrated in three sectors: the research university, the six comprehensive institutions, and the 2-year sector. Combined, the research university and comprehensive institutions represent more than three-quarters of the state's public students, far more than typically enroll in such schools. This array of enrollments, combined with an above average emphasis on graduate studies shown by Minnesota's university students, creates a system of education that on average is more costly to support than the typical enrollment configurations found in most states.

Institutional Finances and Characteristics

Because appropriations (index 97) and enrollments (index 99) in Minnesota are roughly balanced, state support per student to the public sector is just below the U.S. average. (Exclusion of the vocational technical sector does not affect this analysis since both finances and students in that sector are excluded.) These state appropriations to higher education are supplemented by substantial revenues from other sources, including tuition and private funds. As a result, the revenues index for public institutions based on state support alone, 98, increases to 107 when augmented by revenues from other sources. This revenue posture, however, is mixed among the different sectors. The largest sector, the main campus of the University of Minnesota, operates with approximately 5 percent less funding per student than similar institutions elsewhere. The next largest sector, the comprehensive institutions, is funded at 21 percent below average per student. The primary 2-year sector (emphasizing a comprehensive or academic program) operates at levels 9 percent below average. By contrast, the public occupational 2-year schools and the baccalaureate institutions are funded at rates substantially above average, 53 and 23 percent respectively. The net profile for Minnesota shows that the level of state support directed to public institutions is in balance with the number of enrolled students but insufficient in relation to the greater university and graduate character of the public sector. As a consequence, the three largest sectors operate with below average funds per student.

Surprisingly, the above funding profile is not reflected in faculty salary levels. In most sectors and most ranks, faculty in public institutions are paid at levels close to the national average. Minnesota's recent salary increases (between 1975 and 1979) were generally above average, and hence important in bringing salary levels to the norm.

INDEPENDENT INSTITUTIONS: STATUS REPORT

MINNESOTA

State and Local Finances

Per Capita

State & Local Tax Revenues [$867 / 111] × Percent Allocated to Higher Education [12% / 110] = State & Local Appropriations to Higher Education [$106 / 122] × Percent Allocated to Independent Higher Education Institutions [0% / 36] = State & Local Appropriations to Independent Institutions [$.4 / 44]

Independent Enrollments

Per 1000 Population

Resident Enrollments [6.3 / 109] + Out-of-State Enrollments [3.2 / 88] = FTE Enrolled in Independent Institutions [9.5 / 101]

Independent Institutional Support (per capita)		FTE Enrollment (per 1000 pop)		Percent State Residents

Data Notes

1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state-funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here.

Postsecondary vocational technical education	$ 77,226,451	(31,003 FTE Students)
State boards and commissions	$ 4,685,668	
Retirement benefits (including social security)	$ 6,567,047	
Fringe benefits	$	
Interstate contracts and reciprocity payments	$ 6,421,000	
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$ 425,000	
Centrally administered capital/debt service	$	
Other State Adult Vocational Appropriations	$ 5,450,000	

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 10,474,773*
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$
—auxiliary enterprises	$
—other	$

Tuition and Fees reappropriated by the state (yes or no) No

Other Comments

*For Postsecondary Vocational-Technical Institutes

The reader is cautioned to recognize, as noted above, that the area vocational-technical institutes are not included by NCES in their HEGIS surveys, causing the exclusion of a large segment of postsecondary education. This exclusion also affects the Census figures shown on the first page of data for Minnesota. This exclusion also affects the enrollment figures shown on that same page. Access to postsecondary education therefore, is higher in Minnesota than shown here.

The enrollment figures on the first page represent FTE enrollment. Headcount enrollment to all collegiate institutions is 163,806 and to all Minnesota institutions (including the technical institutes) is 195,216.

Source: Minnesota Higher Education-Coordinating Board

MISSISSIPPI

Recent Trends

Appropriations to public colleges and universities in Mississippi made major strides forward between 1975 and 1979. An increase of 71.2 percent in state appropriations accommodated 9.8 percent enrollment gains as well as inflation. In addition, these increases in state funds represented a 19.3 percent real dollar expansion in the state's commitment to higher education. These gains in state appropriations were widely shared within the public sector and only the health professional institution (University of Mississippi, Medical Center) lost value in its per student purchasing power. This loss was tied to a 49.5 percent major jump in enrollments that, with inflation, outdistanced the 80.8 percent increase in state funding.

Tuition also increased faster than enrollments and inflation in Mississippi, growing by 4.5 percent in real dollars per student. The combined effect of real dollar improvements in state appropriations, tuition revenues, and other revenues as well was a per student net gain of 14.5 percent in adjusted dollars in total E&G revenues for the public sector. These funding improvements placed Mississippi 14th in the nation in gains in real dollar funding per student. Nationally, public systems gained an average 6.3 percent in real dollar funding. Mississippi's 14.5 percent increase was more than double that average rate. The only public sector not showing real dollar gains in total funds was the Medical Center of the University of Mississippi, where funding fell 10.5 percent in real dollar terms per student.

State Financing of Higher Education

Mississippi spent nearly $220 million for higher education in fiscal year 1979. This amounts to $92 for each citizen, a level 6 percent greater than the U.S. average.

Although Mississippi is the poorest state in the nation if measured by its capacity to raise taxes, the state places a high priority on higher education. It allocates 18 percent of all tax revenues (and 12.2 percent of its total budget, including Federal revenue sharing funds) to this public function. These allocations far exceed the tax and budget shares of most states, and almost all the funds are channeled into direct support of institutions. Ninety-nine percent of state appropriations support higher education institutions and postsecondary vocational-technical schools. The remaining 1 percent provides student aid as well as support for the State Board of Trustees.

State Tax Base and Budget

Mississippi's capacity to raise taxes is 31 percent below the national average. In fact, its capacity is among the lowest five states in the country in eight of the eleven tax categories studied in this report. Further, the state does not fully utilize its capacity, taxing at rates 4 percent below average. Mississippi's tax system emphasizes sales taxes and severance taxes and, to a lesser degree, income and property taxes. As a result of these tax levies, Mississippi collected only $520 for public purposes. The national average level is $782. Mississippi tax revenues are therefore 34 percent lower than the U.S. average. This tax position improves somewhat with the infusion of Federal revenue sharing funds. In 1979, the state's total expenditure was $1246 per capita, which is 16 percent below the average.

Mississippi devotes above average shares of its state budget to highways (index 144), health and hospitals (index 144), and higher education (index 133). Public welfare (index 100) and elementary/secondary education (index 96) receive near average portions of the state's budget. Public services (index 73) and "other" miscellaneous functions (index 77) are allocated reduced shares of the state's smaller than average budget pie. A comparison of the 1979 budget share for higher education with comparable figures for 1975 shows no change.

Higher Education Enrollments

The citizens of Mississippi appear to echo the higher education priority shown by the state's budget, and resident enrollment rises from 31 per 1,000 to 39 per 1,000 if postsecondary vocational-education enrollments are included. This rate of enrollment places Mississippi among the leading ten states in terms of higher education access for its citizens, and it is a direct consequence of enrollment at public institutions in the state. Mississippi residents are half as likely as other states' residents to attend private institutions in the state or to migrate to other states for higher education. Their high rate of in-state participation is made possible by their state system of public higher education.

Despite a smaller number of high school graduates than the current U.S. average, the first-time entrance rate of state residents is 30 percent greater than average. Combined with 31 percent more students from other states and a high degree of full-time (versus part-time) study, the enrollment rate in public institutions is 7 percent greater than the typical level in other states. This is sufficient to overcome the system's low retention rate.

Mississippi's system of public education is more university oriented than is the case in most states and, to compensating degrees, places less emphasis on comprehensive institution enrollments. Also, the institutions in the system are on average smaller in size. These two characteristics indicate a system that is more expensive to operate than average. However, the low emphasis on graduate enrollments in Mississippi's public system offsets this condition to a substantial degree.

Institutional Finances and Characteristics

The profile described thus far depicts a public higher education system funded at levels 10 percent above average and enrolling 7 percent more students than is typical. The closeness of these proportions bring appropriations per student to just above the U.S. average.

In 1979 Mississippi allocated $2759 per student to public institutions. However, the distribution of these funds varied by sector. Three sectors—the research university, Mississippi State University (index 127); the general baccalaureate, Mississippi Valley State University (index 101); and the professional/specialized sector, Alcorn State College (index 120)—were funded by the state at levels above similar schools elsewhere. The remaining sectors were funded at rates below average. The university sector (without medical programs)—including the University of Mississippi and the University of Southern Mississippi—had the lowest relative level of funding. Combined, the level was 19 percent below levels for similar types of institutions across the United States.

Revenues from tuition are just below average (index 95) in the public sector; revenues from private sources are 41 percent below average, while those from other sources are 22 percent above average. Government grants and contracts are also substantially above average, by 15 percent. In net, total E&G revenues per student are just at the overall U.S. average, with noticeable variations by sector. In total funding, three sectors operate above average while five sectors receive revenues below average.

Despite major improvements in faculty salaries between 1975 and 1979, in all categories of institutions all ranks are below national rates. Overall, faculty salaries for public institutions in Mississippi are 18 percent below the U.S. average.

Data Notes

1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here.

Postsecondary vocational technical education	$ 11,682,207	(19,218 FTE Students)
State boards and commissions	$ 689,264	
Retirement benefits (including social security)	$	
Fringe benefits	$	
Interstate contracts and reciprocity payments	$	
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$	
Centrally administered capital/debt service	$	
Other	$	

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ *
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$
—auxiliary enterprises	$
—other	$
Tuition and Fees reappropriated by the state (yes or no)	No

Other Comments

* The legislature appropriates capital outlay separate and apart from operating revenues.

MISSOURI

Recent Trends

Appropriations to public higher education between 1975 and 1979 outpaced both enrollment increases and inflation. As a result, the purchasing power of state funding increased by 6 percent in real dollars per student. Only one category of public institution did not share in these improvements in state funding: the professional/specialized institutions (University of Missouri-Rolla and Harris Teachers College). In this sector, the gain in appropriations was matched by enrollment increases. The impact of inflation therefore reduced per student support by 23 percent in real dollars.

Tuition revenues did not follow this same pattern of improvement, falling by 5.9 percent after adjustment for inflation and enrollments. Still, the improvement in state support was sufficient to yield a net gain of 4.7 percent for the public sector in total E&G revenues (excluding grants and contracts). This gain (index 75) was lower than the average 6.3 percent improvement nationwide. Again, all categories of public institutions benefited from these funding increases except the professional/specialized campuses.

State Financing of Higher Education

Missouri spent approximately $326 million for higher education in 1979, which translates into $68 per capita. This level of funding is 22 percent below typical levels of support for higher education. One percent of these funds was used for state student aid, .9 percent was channeled to the state board, and the remaining funds were funneled to public institutions as appropriations support. This below average level of state funding appears to be directly related to the size of the state's budget. Tax revenues in Missouri are also below average, by 24 percent. As a result, although higher education is accorded a typical budget share, the below average size of the state budget means a below average level of appropriations.

State Tax Base and Budget

Missouri ranks 33rd in the nation in its level of taxable wealth. The state has notably better tax capacity in only one category, farm property. The state is close to average in five other categories: general sales, selective sales, licenses, public utilities property, and death and gift transfers. In the remaining five categories, the state is below average in tax capacity.

The combined effect of these conditions is a tax capacity 6 percent below average. The state, however, is markedly restrained in its use of even this reduced capacity. Only 81 percent of its capacity is tapped, thereby bringing tax revenues even further below average. The state collected 24 percent less than the U.S. average in tax revenues: $597 per capita in contrast to the typical state's revenue of $782 per capita.

Highways, health and hospitals, public services, and elementary/secondary education are all priority state functions and receive above average shares of the state and local government budgets. And higher education's share, unchanged since 1975, is representative of a typical state allocation, while public welfare and "other" functions are given relatively smaller portions of the state's funds (indexed at 83 and 82, respectively).

Higher Education Enrollments

Missouri residents are about 15 percent less likely to enroll in higher education than average U.S. residents. Although typical numbers of residents attend independent institutions in the state, fewer residents enroll in the state's public institutions or in out-of-state institutions. The effect is an enrollment rate of 28 students per 1000 residents, which is in sharp contrast to the U.S. average of 33 per 1000.

Enrollments in the public sector are 18 percent below those of the average state. This below average enrollment occurs despite a typical number of high school graduates, a near average number of students from other states, and an above average tendency toward full-time study. These lower enrollment rates therefore appear to be tied to a lower rate of first-time enrollment by state residents and a lower rate of retention.

More of Missouri's public students enroll in comprehensive institutions than in either universities or 2-year institutions. Still, enrollments in the public sector are somewhat more graduate in emphasis than is generally the case. Enrollments in the private sector are also more graduate in nature, despite a much lesser reliance on the comprehensive institution level of study. Approximately one-third of the state's students are enrolled at private institutions, a much greater reliance on this sector than is typical.

Institutional Finances and Characteristics

As we have seen, enrollments are 18 percent below average in the public sector and state funding is 21 percent below. Because state dollars and the number of students to be supported are nearly commensurately low, appropriations per student are only 4 percent below average. However, individual sectors differ dramatically within that profile.

Univerities (doctoral research and doctoral) and professional institutions fare comparatively well, with rates of state support per student that are 6, 22, and 33 percent above the norm. By contrast, the comprehensive (index 86), general baccalaureate (index 91), and 2-year (index 85) institutions are funded at rates well below similar groups elsewhere. With the exception of general baccalaureate and 2-year institutions, these relative profiles are unchanged by other revenues. The general baccalaureate campuses show a deterioration in funding during this period, from an index of 91 in state support per student to an index of 79 in total E&G funding. The 2-year schools show an improvement, from an index of 85 in state funding to 96 in total revenues, because of revenues from tuition and other sources. Funding from government grants and contracts is far below typical levels in the public sector, generating 40 percent less than average per faculty member.

Funding levels at the private institutions vary substantially. Only two sectors are well funded: Washington University in St. Louis and the private 2-year campuses. All other private institutions operate with 14 and 52 percent less funds per student than similar institutions in other states.

Faculty salaries improved generally in Missouri between 1975 and 1979. Despite these gains, however, faculty in the public sector are paid at levels 7 percent below average, while levels in the private sector are 6 percent below. Faculty at the full professor rank appear to be the most directly impacted, and none are paid at or above the average.

Data Notes

1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded except state funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here.

Postsecondary vocational technical education	$
State boards and commissions	$ 28,366,378
Retirement benefits (including social security)	$
Fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$ not available
—auxiliary enterprises	$
—other	$
Tuition and Fees reappropriated by the state (yes or no)	Yes

Other Comments

The allocation of system office finances to the campus units should differ from the procedure used by NCES, according to the University of Missouri System Office. This adjustment would most affect the University of Missouri - Kansas City (classified as Doctoral with Medical) and would appreciably lower academic support per student as well as E&G expenditures at this campus.

Source: Missouri Department of Higher Education
University of Missouri System Office

MONTANA

Recent Trends

Public institutions in Montana experienced a real dollar improvement in the level of state and local funding between 1975 and 1979. In appropriating $53 million to public institutions, Montana provided 49 percent more support in 1979 than it had 4 years earlier. Part of this gain was consumed by the 5.5 percent enrollment increase as well as by inflation. Still, the jump in state funding was sufficient to accommodate both inflation and additional students as well as to provide an 8.1 percent real dollar expansion in state support. These improvements in state support were evident in all public institutions except the comprehensive institution, Montana State University. Although state support to Montana State jumped by 50.3 percent, the 15.4 percent increase in enrollments in combination with inflation in the period, offset that gain, and real dollar per student funding from the state slipped by .4 percent.

Tuition revenues collected by public institutions declined in real dollar terms in this period, falling 10.7 percent overall. Each sector of public institutions experienced some loss in the purchasing power of tuition dollars. As a consequence of these losses, the value of all E&G revenues per student fell by .2 percent in inflation adjusted dollars. Three sectors, however, experienced real funding gains in this period, the University of Montana (6.5 percent), Eastern Montana College (2 percent), and the three public 2-year institutions (25.6 percent). By contrast, Montana State saw its funds decrease by 9.1 percent in real dollars per student, and the three specialized professional campuses showed losses of 2.2 percent.

State Financing of Higher Education

Montana concentrates all its higher education support on funding for public institutions. No aid to the small independent sector was evident in institutional appropriations. Montana was one of three states not responding to a survey about student aid and other forms of state support for higher education. Hence, if such aid does exist, it will not be reflected in this report. The state spent $70 per capita in 1979 for higher education institutional support, a level 20 percent lower than typical state-level appropriations.

State Tax Base and Budget

Montana has an average level of taxable wealth and ranks 22nd among the states in its tax capacity. Its areas of strong economic activity include farm property, public utilities property, severance tax areas, and licenses. Its overall tax rates are 5 percent lower than average. The state's tax structure emphasizes income taxes, property taxes (except farm property, which is only lightly taxed), and severance taxes. While there is no general sales tax in Montana, there are selective sales taxes. The effect of an average tax capacity and a somewhat lower tax effort is a level of tax revenues 4 percent below average.

Census figures combining state tax revenues and Federal revenue sharing funds depict Montana's 1979 state budget as 8 percent greater than average on a per capita basis. Sixteen percent of state expenditures are for highways, a share 78 percent larger than typical. Elementary/secondary education also is budgeted at above average rates in this state, garnering 30 percent of Montana's funds. The national share is 27 percent. All other public functions, including higher education, receive smaller than average shares of the state's budget. Higher education's share in 1979 was 8 percent, dramatically less than its 1975 share of 11 percent.

Higher Education Enrollments

Montana residents participate in higher education at a rate 9 percent less than average. The access provided by the public sector is average, 25 full-time students per 1000. Montana residents are 50 percent more likely to go to other states for higher education. Their low rate of participation in private in-state schools accounts for the reduced levels of participation in higher education.

Montana graduates about one-quarter more students from high school than the typical state but these students attend the state's public colleges in below average numbers. However, these initially low enrollment levels are more than offset by several factors: substantial in-migration of students from other states, above average retention rates, and large numbers of full-time students. As a result, Montana's public institutions accommodate 9 percent more students than is typical. Its independent sector enrolls 62 percent fewer students than is generally the case.

Montana, with a population of 761,000 people, ranks 43rd among the states. As a result of this low population base, public higher education institutions, on average, are 40 percent smaller than similar U.S. institutions. And, while the state's emphasis on university studies is similar to the U.S. level, its emphasis on comprehensive, baccalaureate, and specialized professional institutions exceeds national levels. Further, Montana's emphasis on 2-year institutions is far below national levels, with only 6 percent of public students enrolled in them. The national enrollment in this sector is 36 percent.

Given the smaller-than-average size of its institutions, its low enrollment in 2-year institutions, and its emphasis on upper division studies, higher education in Montana is comparatively expensive to operate.

Institutional Finances and Characteristics

Montana provides a 10 percent less-than-average amount of state dollars to higher education, and it apportions these dollars across a 9 percent larger-than-average pool of students. Spreading fewer dollars over more students creates a level of $2,200 per student support, 18 percent below the typical level. The University of Montana, the sector most directly impacted, receives state funding that is 26 percent below average for such schools. Montana State University and Eastern Montana College are also affected and receive state funding at levels 6 and 9 percent below average, respectively. The public 2-year schools, by contrast, receive 17 percent more state funding per student than is generally the case, while the other professional and specialized institutions receive 7 percent more state funding than the average.

Tuition revenues collected by Montana's public institutions are 19 percent below average, with every sector receiving less than the average amount of tuition funds. The result of all these low revenues is that public institutions in Montana operate with 16 percent fewer dollars per student than public systems elsewhere. Again, the University of Montana is most directly impacted and is funded at 26 percent below average levels. Also impacted again are Eastern Montana College, funded at 13 percent below average, and the other specialized campuses funded at 10 percent below average. Montana State and the 2-year campuses operate with 8 percent more funds per student than similar schools elsewhere. Revenues from government grants and contracts are 21 percent lower than average.

Faculty salaries in Montana's institutions increased at a more rapid rate between 1975 and 1979 than the U.S. average. Still, despite these gains, salary levels are 10 percent below average overall. In the upper ranks they are often even lower.

Data Notes
1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded except state-funded student aid which was reported on the **State Financing of Higher Education** page for this state Only funds not reported by the institutions in the state are shown here

Postsecondary vocational technical education	$
State boards and commissions	$
Retirement benefits (including social security)	$
Fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data

Debt service that is part of state and local appropriations to public institutions in the state	$
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$
—auxiliary enterprises	$
—other	$

Tuition and Fees reappropriated by the state (yes or no)

Other Comments

Source: No data notes were supplied by the State Higher Education agency/commission.

NEBRASKA

Recent Trends

Nebraska's higher education received a big boost in funding support from the state between 1975 and 1979, a 75 percent increase in appropriations. Although enrollments also rose substantially, the appropriations jump was sufficient to cover both enrollment increases and inflation, netting an average gain of nearly 16 percent in real dollar funding. Student gains ranged from a high of nearly 60 percent at Peru State to 8.8 percent at the University in Lincoln.

All sectors except the 2-year occupational schools shared in these improvements. For those schools, a gain of 125 percent in appropriations was offset by a 148 percent increase in enrollments. With inflation taken into account, the value of these appropriations was diminished by 31 percent. A marginal cost analysis would be needed if the four 2-year occupational schools wished to determine the amount of state funding that could adequately cover the cost increase due to additional students.

The value of tuition revenues in the state fell nearly 10 percent during this same 1975 to 1979 period. Still, the gains in revenues from other sources outweighed this loss and even in inflation adjusted dollars per student, net revenues improved by 6.6 percent in the public sector.

State Financing of Higher Education

Increased state appropriations brought per capita support to $100, a level 15 percent above the national average. Nebraska achieves this level of support by allocating 13 percent of state tax revenues to higher education. This is 18 percent above the average level and indicates the high priority accorded higher education by the state. Almost all these funds are channeled directly to public institutions. A 1 percent share supports the following activities: the state coordinating commission, reciprocity arrangements, and a special instructional improvement fund. This concentration of support for public institutions creates a level of per capita funding that is 27 percent above average. The state achieves its unusual level of support for higher education by allocating a relatively large proportion of public funds to this function.

State Tax Base and Budget

Nebraska's taxable wealth and efforts to tax this wealth are close to the average. Though the state ranks 27th nationally in tax capacity, it has above average tax potential in four categories: general sales (index 111), licenses (index 118), farm property (index 551), and death and gift transfers (index 183). Its tax structure, however, tends to emphasize property taxes (residential, commercial/industrial, farm, and public utilities) as well as corporate income. Nebraska collected $761 per capita in 1977, a level 3 percent below the U.S. rate of $782 per capita.

In addition to higher education (index 133), the state's budget emphasizes spending for highways (index 156) and for elementary/secondary education (index 104). Health and hospitals, and public services receive average shares of the state's funds, while public welfare (index 67) and "other" functions (index 77) receive below average shares. Higher education's share has increased somewhat since 1975, moving from 11 to 12 percent of the budget.

Higher Education Enrollments

Nebraska residents are 6 percent more likely to attend colleges and universities than the average U.S. citizen. Chiefly as a result of high access to public higher education in the state, 35 residents per 1000 attend higher education. Twenty-nine of these 35 residents attend public institutions in state, a number that is 16 percent greater than usual. An average number of Nebraskans attend institutions out of state (2 per 1000), while a smaller-than-average number attend private institutions in state (4 per 1000).

Below average numbers of residents from outside Nebraska enroll in public institutions in this state, and retention rates are somewhat lower than average. However, the large number of high school graduates, their heavy attendance patterns, and a greater-than-average emphasis on full-time study creates a pool of students 11 percent larger than average. These publicly enrolled students are concentrated in the research university and the four comprehensive campuses to a much greater degree than is generally true. Fewer Nevada students enroll in 2-year institutions than do students nationally. The state's public system is therefore more graduate in character than is typical, thus creating a more costly educational program to support.

Institutional Financing and Characteristics

Spreading state funding that is 27 percent greater than average over only 11 percent more students than average creates a favorable per student level of state appropriations. Nebraska spends $3076 per student, a level 14 percent above average. There are, however, notable sector differences.

The University of Nebraska campus at Lincoln, the Medical Center, and the comprehensive campuses receive substantially less funding than is typical for such schools (indexed at 77, 86, and 71 respectively). These relative funding levels are not improved noticeably by other sources either, and the total revenue indices for these institutions change very little. By contrast, the remaining public sectors—the baccalaureate and 2-year schools—are funded at levels well above those typical in other states. Thus the very favorable revenue profile for the public sector is not quite as favorable as it would appear. Actual distribution of revenue creates widely different funding conditions among the various categories of the public sector.

Faculty salaries in Nebraska have increased faster than the national average. However, despite these gains, salary levels for Nebraska faculty are 9 percent lower overall in the public sector, with substantial variations by rank and category. Surprisingly, despite above average funding in the baccalaureate and 2-year sectors, faculty salaries here too are below average.

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state-funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here.

Postsecondary vocational technical education	$
State boards and commissions	$ 2,218,957
Retirement benefits (including social security)	$
Fringe benefits	$
Interstate contracts and reciprocity payments	$ 825,801
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other Board of Trustees of Nebraska State Colleges for Instructional Improvement	$ 260,000

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$ *
—auxiliary enterprises	$ *
—other	$
Tuition and Fees reappropriated by the state (yes or no)	Yes

Other Comments

* Nebraska institutions do have Student Fee and Auxiliary Enterprise Revenue dedicated to capital purposes. However, a clear audit trail is not available on the reporting of these figures.

Source: Nebraska Coordinating Commission for Postsecondary Education

NEVADA

Recent Trends

Nevada provided a substantial infusion of state dollars for higher education between 1975 and 1979. Spending for higher education increased by 77 percent, to over $46 million, despite a 7.5 percent drop in enrollments. And the effect of this increased state support for a reduced number of students created a 46.4 percent real dollar expansion.

Tuition revenues also made inroads against inflation and represented an 11.6 percent improvement for the public sector. The combined revenues from all sources resulted in a 41.3 percent gain, even after adjustment for both inflation and the decrease in the number of enrolled students. Nebraska led the nation in these real dollar gains, both for state appropriations and for total E&G revenues. Both public sectors in Nebraska experienced improvements. The two comprehensive campuses had a combined gain of 22 percent per student, while the 2-year sector showed a gain of 150 percent per student.

State Financing of Higher Education

Nevada spent $74 per capita for higher education in 1979, a level 15 percent below average. Although the state's tax revenues are close to the U.S. average, a smaller-than-average share of these funds is allocated to higher education. And, all of these higher education monies are allocated to direct institutional support in the public sector. There are no separate state student aid funds or other forms of higher education support indicated in Nevada.

State Tax Base and Budget

Nevada, with a tax capacity 53 percent larger than average, has the second highest level of taxable wealth in the United States. (Wyoming has the highest level.) Nevada's high tax capacity includes most tax categories; it leads the nation in per capita general and selective sales volume, is second in individual income and death and gift transfers, ranks third in licenses, and is fourth in public utilities and property.

However, the state exerts the lowest tax effort in the nation (37 percent below average). It imposes no income tax and a relatively low rate of property tax. Nevada's tax effort is above average in only one category, selective sales. Still, despite these low rates, the state raised $752 per capita in tax revenues in 1977; the U.S. average was $782. Stated differently, Nevada, because of its tremendous wealth, collects close to an average amount of taxes despite its very low tax rates.

Nevada's budget indicates typical spending priorities for public services, highways, health and hospitals, and "other" miscellaneous functions. The remaining categories of public enterprise are funded below national rates. Higher education received 7.4 percent of the state's expenditures in 1979, which is 22 percent smaller than average. This share has not changed since 1975.

Higher Education Enrollments

Nevada residents, echoing this low priority for higher education, are 21 percent less likely to pursue higher education than the average U.S. resident. Although 50 percent more of Nevada's residents migrate to other states for higher education than is typical, fewer residents attend the state's public institutions.

Because a large number of students from other states come to Nevada for higher education, and because first-time resident enrollment is much above the average, total enrollment in the public sector is very close to national levels. The public system in Nevada is a bi-modal system, with over 60 percent of all public students enrolled in the two comprehensive campuses of the University of Nevada. The remaining public students attend one of three public 2-year campuses. There is only one independent school in the state, Sierra Nevada College, a baccalaureate institution.

Institutional Finances and Characteristics

Nevada provides very substantial funding to the comprehensive campuses (index 148) but very low funding to the 2-year schools (index 57). The comprehensive campuses further improve their funding profile with revenues from other sources, thus operating with 63 percent more funding than similar U.S. institutions. By contrast, the 2-year schools obtain only a modest increment in revenues from other sources and must function with nearly 40 percent fewer funds than similar institutions.

These funding profiles are mirrored in faculty salary levels. Although both sectors increased salaries at above average rates between 1975 and 1979, salaries at the 2-year campuses are 13 percent below average while those at the comprehensive institutions are 9 percent above average.

Only 5 percent of students in the public system are studying at the graduate level. This is more than 40 percent below the average and represents a lesser requirement for public funding. Institutions in Nevada are generally 15 percent smaller in size.

Data Notes

1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state-funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here.

Postsecondary vocational technical education	$
State boards and commissions	$
Retirement benefits (including social security)	$
Fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$
—auxiliary enterprises	$
—other	$
Tuition and Fees reappropriated by the state (yes or no)	

Other Comments

NOTE: There is a medical school, University of Nevada at Reno, which is classified in the Public Comprehensive category of institutions.

NEW HAMPSHIRE

Recent Trends

State appropriations to public higher education in New Hampshire increased at a somewhat slower rate than the national average between 1975 and 1979, growing by only 40 percent. During this same period, the number of students enrolled in the public sector grew by 9.7 percent. After adjustment for these student gains and for inflation, the purchasing power of the increased state funds actually shrunk by 2.2 percent. Appropriations, however, varied among the sectors. The public comprehensive and specialized/professional institutions showed real dollar per student gains of 9.6 and 1.2 percent respectively, while the university and 2-year institutions faced losses of .3 and 16.5 percent respectively. These losses in state funds were offset to some degree by gains in tuition revenues, which grew 6.7 percent in real dollars per student. Still, total E&G revenues decreased by 1.4 percent in inflation adjusted dollars per student. The University of New Hampshire saw its total funding shrink by 3 percent in real dollar terms, and the 2-year campuses showed declines of 5.9 percent. On the other hand, funding at Plymouth State College improved 14.3 percent in real dollar terms and funding at Keene State College improved 17.2 percent.

State Financing of Higher Education

State funding for higher education in New Hampshire is about half the average level in other states. In 1979, the state spent approximately $37 million for higher education, which translates into $44 per person. Nationally, such support is $87 per capita. Almost all of New Hampshire's higher education funds are appropriated directly to institutions, with less than 1 percent directed to student aid. The portion shown under "other" is actually institutional support for the public postsecondary vocational education institutions and hence also considered part of institutional appropriations.

State Tax Base and Budget

New Hampshire ranks 19th among the states in taxable wealth. It has, however, one of the lowest taxation levels in the country, and this is reflected in its resulting low tax revenues. Despite its capacity to raise $799 per capita at average tax rates, the state collects only 73 percent of this amount, $583 per capita. The state has above average capacity in sales taxes, licenses, residential property, and death and gift transfers, but its tax structure is heavily oriented only to property taxes, corporate income taxes, and death and gift transfers.

Two functions receive above average shares of this small budget: highways (index 167) and public welfare (index 108). Higher education and elementary/secondary education appear to be at the national average, according to Census figures. And higher education's claim on the budget has fallen since 1975 when it received an above average share. Other functions receive smaller-than-average shares.

Higher Education Enrollments

Even when postsecondary vocational education enrollments are included, access rates for New Hampshire residents are substantially lower than is typical. Resident enrollment in the state's public institutions is about 40 percent below average. Resident enrollment at the state's private institutions is average, and twice the average number of residents attend institutions out of state. All these numbers could still not bring the total access rate for New Hampshire residents to the average.

Public institutions in New Hampshire enroll 21 percent fewer students than do typical public systems. Despite an above average number of high school graduates, a greater emphasis on full-time study patterns, and a very large number of students from other states, low resident participation rates and low retention rates are not offset. Thus, institutions in New Hampshire are generally smaller in size than average.

The majority of students in the state attend the University of New Hampshire, placing a far greater-than-average emphasis on university-level studies. Enrollments at comprehensive and 2-year institutions are proportionally reduced. Despite the large enrollment at the University, a below average share of students is studying at the graduate level, reducing what otherwise would be a tremendously expensive system of education.

Institutional Finances and Characteristics

Although New Hampshire's public sector enrolls 21 percent fewer than the average number of students, state appropriations are 51 percent below the average. And because enrollments are larger than appropriations, state support per student in the public sector is almost 40 percent below the U.S. average. However, public institutions in New Hampshire receive substantial revenues from other sources, particularly tuition. Thus, to a major extent, these institutions, through tuition collections, are able to redress the situation created by the low levels of state support. For example, the University reverses its below average index of 69 in state funding and obtains above average support (index 113) in total E&G funds, excluding government grants and contracts. In addition, its government grants and contracts are more than twice the usual level. All other sectors also show improvements in their total funding levels. Plymouth State College shifts from an index of 39 in state support to 76 in total funds; the 2-year occupational schools move from 92 to 94; and Keene State College goes from 38 to 73.

Enrollments in New Hampshire's public sector are low in part because of the large enrollment in the state's independent institutions. Because the tuition differential between its public and private sectors is much smaller than that of many other states, attendance at independent institutions is attractive to New Hampshire residents. Funding at these independent institutions presents a mixed profile. Dartmouth and the 2-year academic/comprehensive institutions are funded at above average levels while the remaining sectors operate with below average support.

Faculty salaries are below average in both sectors but to a greater extent in the public sector, where increases between 1975 and 1979 were below average. Faculty salaries are lower than those at counterpart schools for all ranks and categories of institutions in the public sector.

Data Notes

1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state-funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here

Postsecondary vocational technical education	$ 4,951,000	(2,529 FTE Students)
State boards and commissions	$ 63,532	
Retirement benefits (including social security)	$	
Fringe benefits	$	
Interstate contracts and reciprocity payments	$	
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$	
Centrally administered capital/debt service	$	
Other	$	

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data

Debt service that is part of state and local appropriations to public institutions in the state	$ 4,673,300
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$
—auxiliary enterprises	$
—other	$
Tuition and Fees reappropriated by the state (yes or no)	No

NEW JERSEY

Recent Trends

State appropriations to public higher education in New Jersey increased 47.4 percent between 1975 and 1979, though the 1979 gains were far lower than those for the 2 preceding years. However, this change in state funding matched levels typically found across the states. Enrollments jumped nearly 9 percent during this time, a level that was 50 percent higher than the U.S. norm. New Jersey's increase in state dollars, though tempered by enrollment gains, was still sufficient to cover inflation and provide a 4 percent gain in the real dollar value of state monies.

Tuition revenues did not fare as well during this timespan and, in fact, slipped slightly in adjusted dollars per student, by .4 percent. Still, overall revenues in the public sector improved by 3.4 percent on average, after adjustment for inflation and enrollment growth. Trends in funding were quite uneven among the institutional sectors, with four of them showing gains and three losing ground. These variations went from a gain of 21 percent for the health professional sector (College of Medicine and Dentistry of New Jersey) to a loss of 15 percent at the public baccalaureate schools.

Independent institutions in New Jersey showed a small improvement in their funds between 1975 and 1979, only 1.4 percent per student in inflation adjusted dollars.

State Financing of Higher Education

New Jersey citizens contribute $60 each to support higher education, a level 31 percent below that typically provided in other states. Although New Jersey collects substantial tax revenues (about 18 percent more than most states), only 7 percent of these funds are channeled to higher education, creating a dramatically lower-than-average level of state support.

In distributing these funds within higher education, the state provides an average portion for institutional support, $56 out of the $60 per capita. While some of these institutional dollars go to the independent sector, the bulk goes to the public sector.

New Jersey's higher education budget includes a large amount of student aid, $4.30 per capita. This level is 16 percent above average, a remarkable achievement given the small size of the state's total higher education budget. This 7 percent allocation for student aid is three-quarters larger than that usually provided by states. And, student aid funds also are shared between the public and private sectors. In total, 5 percent of the higher education funds are channeled to the independent sector, an above average share. Typically, states give only 3 percent of their higher education funds to the private sector.

State Tax Base and Budget

New Jersey ranks 12th among the states in its capacity to raise taxes, if measured by its level of economic activity. Because New Jersey ranks even higher in its willingness to tax (9th among the states), the level of tax revenues collected by the state is 18 percent above average. This places New Jersey behind only seven other states in tax monies collected to support public functions.

New Jersey has substantial tax capacity in all the important tax categories but is particularly strong in its levels of individual and corporate income as well as residential and commercial property. Its tax structure shows heavy utilization of all categories of property tax, as well as selective sales taxes, corporate income taxes, and taxes on death and gift transfers.

New Jersey's distribution of these tax revenues and other state funds differs substantially from typical patterns. The state spends larger-than-usual shares of its funds on public services, "other" miscellaneous functions, and elementary/secondary education. The emphasis on these activities is at the expense of higher education, health and hospitals, and highways. Each of these receives one-third less of the state budget than is typical. Public welfare in New Jersey receives the usual state budget share of 12 percent, while higher education's 1979 share of 6 percent declined from its 1975 share of 7 percent.

Higher Education Enrollments

New Jersey residents participate in higher education at close to average levels. This participation level is achieved despite relatively low enrollment by residents at the state's public institutions (index 84) and only average levels of enrollment at its private institutions (index 100). Instead, two and a half times the typical number of students go out of state for higher education. Only Connecticut exports more students than New Jersey. Although 84 percent of New Jersey residents attending higher education do so within the state, nationally 94 percent of residents remain within their state's borders.

New Jersey not only exports a large number of students to other states, but its schools attract fewer out-of-state students than is usual. In New Jersey only one-fifth as many nonresidents attend public institutions and one-half as many enroll at independent institutions as is generally the case. As a result of these lower rates of participation by residents and nonresidents, both the public and private sectors of higher education are smaller than average in New Jersey. Given the state's population, the public system is nearly 25 percent smaller than expected, and the private sector is 22 percent smaller. However, the distribution of students between these sectors mirrors national patterns, with 75 percent attending public schools and 25 percent attending private schools.

New Jersey's student distribution among the different categories of institutions is unusual. For example, the public sector has fewer than the usual number of students at universities and more than the usual number at comprehensive institutions. And the private sector has a substantially greater share of its students at comprehensive institutions, 51 percent versus the U.S. average of 21 percent. As a result, the private university and baccalaureate sectors are proportionately smaller than is typical. And, reflecting the low emphasis on university level studies in both sectors, graduate enrollments are also smaller than is typical.

Institutional Finances and Characteristics

Although both enrollments and appropriations are below national norms, for the state dollars provided New Jersey's public sector is still carrying heavy enrollments. As a result, appropriations per student are 8 percent below average. However, in two public sectors—the health professional (index 189) and the other professional and specialized (index 150)—state support is above the U.S. average. In the baccalaureate sector state funding is average. On the other hand, state funding to the university, comprehensive, and 2-year sectors is below typical levels, in some cases substantially below. Unfortunately, even after including revenues from other sources, these sectors remain below U.S. levels: 22 percent below for the four occupational 2-year schools, 13 percent below for the seven comprehensive campuses, and 10 percent below for Rutgers main campus in New Brunswick. Revenues from government grants and contracts are also below average by 40 percent, a possible reflection of the state's low emphasis on university and graduate study.

Finances at the state's independent institutions also exhibit a variable pattern. The universities, other professional schools and the occupational 2-year schools operate with above average financial support (excluding government grants and contracts), while the comprehensive, general baccalaureate, and general 2-year campuses function with reduced levels of funding.

Faculty salaries in New Jersey increased at above average rates between 1975 and 1979, and compared very favorably with national salary averages in 1979. Faculty salaries by rank in the public sector were above average in every case (except the "other" rank) and in most instances by substantial amounts. Among the independent institutions, the profile is still mostly positive, though faculty at some ranks and in some sectors still receive below average rates.

Data Notes

1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state-funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here

Postsecondary vocational technical education	$	
State boards and commissions	$	14,857
Retirement benefits (including social security)	$	
Fringe benefits	$	
Interstate contracts and reciprocity payments	$	
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$	
Centrally administered capital/debt service	$	
Other	$	512,644

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data

Debt service that is part of state and local appropriations to public institutions in the state	$	42,744,040*
Current Funds revenues dedicated to capital purposes:		
—tuition and fees	$	none
—auxiliary enterprises	$	
—other	$	

Tuition and Fees reappropriated by the state (yes or no) Yes, at nine State colleges.

Other Comments

The reader should note that although NCES classifies Union College as an independent institution, this campus is considered a public institution with the N.J. Community College System and fund it accordingly. The inclusion of Union College in this study within the independent sector causes their figures on state and local appropriations to be approximately $80.00 higher per student than otherwise is the case. Public community college data do not include Union, although they should.

* Debt service of $1,771,015 was reported in state appropriations for the county colleges and for Rutgers University in the amount of $40,973,025. Figures for the state colleges, the New Jersey Institute of Technology, and College of Medicine and Dentistry were not available.

It was also noted that data in the "Trends in State and Local Appropriations" section may be misleading due to incomplete data. Increases for the Two-Year Occupational sector should be approximately 55% between 1975 and 1979, for the Health Professional sector approximately 29%, and approximately 32% for the entire university system.

Source: New Jersey Department of Higher Education

NEW MEXICO

Recent Trends

Public institutions in New Mexico experienced major gains in both state funding and student enrollments between 1975 and 1979. They increased much faster than the national rate. And the improvements in state support outdistanced both inflation and enrollment growth, netting a 32 percent real dollar gain for the public sector. All categories of public institutions shared in these improvements, though to differing degrees. And even though the purchasing power of tuition fell by 12 percent during this period, the boost in state appropriations still yielded an overall revenue gain of 27.5 percent (excluding government grants and contracts). These gains permeated all public sectors in New Mexico.

Higher Education Financing

New Mexico allocates $101 per capita for higher education, for a total of $120 million in 1979. This level of support is 16 percent greater than average and is the result of the state channeling a large share of tax revenues toward higher education. These funds are almost exclusively institutional appropriations, which include the postsecondary vocational-technical sector (shown here under "other"). No state student aid is given to private higher education in New Mexico. And a very small share of higher education funds supports the Board of Educational Finance.

State Tax Base and Budget

New Mexico's taxable wealth is somewhat below average, ranking 29th in the nation. The state's strongest tax capacity is in selective sales, licenses, farm property, public utilities, and severance-related activities. Its taxation rates, however, are 21 percent below average. In only two categories are taxes above average: general sales and severance taxes. As a result, tax revenues in this state are only about three-quarters of the average amount.

A 1979 measure combining tax revenues with Federal revenue sharing funds placed New Mexico's state budget at a level 6 percent above average. Census figures reiterate the high priority accorded higher education (index 144), highways (index 144), and elementary/secondary education (index 107). The budget share given to higher education is unchanged since 1975. Public functions receiving below average budget shares include public welfare (index 58), health and hospitals (index 89), and "other" miscellaneous services (index 82). Public services as a category receive a typical budget share.

Higher Education Enrollments

New Mexico's emphasis on higher education is seen also in the above average participation of its residents, if enrollments in the postsecondary vocational-technical sector are included. Residents enroll in above average numbers at the state's public institutions as well as at institutions in other states. Only their enrollment at independent institutions in state are below average (by a substantial amount). This sector is very small overall, with only four other states having fewer students in the independent sector (Nevada, Alaska, Arizona, and North Dakota).

Enrollments at public institutions in New Mexico are 16 percent above average despite low initial enrollments by state residents. High retention rates, heavy patterns of full-time study, and substantial in-migration of students from other states more than compensate for this low first-time enrollment.

The composition of the public sector in New Mexico shows an unusually large concentration of students at universities (68 percent versus a national average of 31 percent). Fewer than the average number of students are enrolled in all other types of institutions. Reflecting this emphasis on universtiy education, the public sector enrolls about 30 percent more graduate students than the average, representing 11 percent of all students. Public institutions in New Mexico are also smaller than usual. This combination of conditions creates a system that is more expensive to operate.

Institutional Finances and Characteristics

Because state appropriations and public enrollment levels in New Mexico exceed the national average by nearly equal rates, appropriations per student are at the U.S. average. There are, however, differences in the distribution of the support among categories of public institutions. The universities and 2-year academic/comprehensive institutions receive below average appropriations. The comprehensive institutions and the 2-year occupational school, by contrast, receive above average appropriations (indexed at 134 and 103 respectively). Tuition revenues collected in the public sector are below average, but other sources provide above average funding. Once all these revenues are totaled, only the University of New Mexico's main campus is funded at rates dramatically below average (index 75). All other sectors either exceed the average or are within reach, e.g., New Mexico State (index 94).

Research funding in New Mexico is substantially above average, with expenditures per faculty member registering at twice the national average.

Faculty salaries have shown major improvement between 1975 and 1979. Although the all-ranks average for the public sector is close to the U.S. average, in many ranks, faculty still are paid somewhat below average salaries. Surprisingly, salaries at New Mexico State are 10 percent below average despite near average revenues and high rates of research activity.

Data Notes
1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here

Postsecondary vocational technical education	$ 11,269,400
State boards and commissions	$ 411,400
Retirement benefits (including social security)	$
Fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data

Debt service that is part of state and local appropriations to public institutions in the state	$
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$
—auxiliary enterprises	$
—other	$
Tuition and Fees reappropriated by the state (yes or no)	No

NEW YORK

Recent Trends

Between 1975 and 1979, New York's public sector received the smallest increases in state appropriations of any state. State and local appropriations for higher education increased only 14 percent during this period, approximately 70 percent below the national rate. New York's small gains were partially offset by the 6.4 percent drop in enrollments. Still, appropriations dropped nearly 7 percent in real dollar terms per student in this period. Most categories of public institutions shared in these declines, exceptions were the universities and health professional institutions.

To compensate, tuition revenues increased dramatically, climbing 21.6 percent in inflation adjusted dollars. This pattern was evident in all categories of schools except the universities. Total E&G revenues were generally constant in this period and sufficient to accommodate inflation, given the decrease in enrollments. However, the profile by sector was mixed, the universities and health professional sector made gains against inflation and enrollment growth, while all other sectors saw the erosion of their purchasing power, from 1.6 percent to 14.5 percent.

State Financing of Higher Education

Despite these real dollar losses in state appropriations, New York still provides 6 percent more per capita support for higher education than does the average state. In 1979, for example, residents spent $92 per capita for higher education. The national average is $87 per capita. Moreover, New York provides more financial support to the independent sector—$4.40 per capita—than does any other state. In total 13 percent of the state's higher education budget is channeled to the private sector. The typical national allocation is 3 percent. New York also provides more student aid--$7.10 per capita—than does any other state.

New York's emphasis on support to the independent sector is an explicit recognition of the substantial level of access provided by these schools. Only Massachusetts enrolls a greater portion of the state's population in private institutions. As a consequence of the substantial allocation of funds to private higher education and the emphasis on student aid in the public sector (at more than four times the national rate), the level of direct institutional appropriations to the public sector is 7 percent below average. Less than 80 percent of the state's higher education budget goes to public institutions in the form of appropriations. Nationally, the allocation of state funds to these campuses averages 90 percent.

State Tax Base and Budget

New York has about 5 percent less taxable wealth than the typical state, ranking 31st in tax capacity. However, by levying the highest tax rate in the nation (62 percent above average), the state overcomes its below average wealth and raises more tax revenues than does any other state. New York has above average tax capacity in three of the eleven tax categories—corporate income, commercial/industrial property, and death and gift transfers. The state makes a below average tax effort in two relatively minor categories, licenses and severance, where their capacity is inherently low anyway. New York leads the nation in individual income tax rates (index 241) and ranks second in all four categories of property tax: residential (index 171), commercial/industrial (index 175), farm (index 251), and public utilities (index 186). The state also levys substantial tax rates in general and selective sales taxes (indexes 142 and 111 respectively).

The net effect of these tax rates is that the state collects $1208 per capita in tax revenues, exceeding by $464 its expected level of $744. This massive tax program enables the state to collect 62 percent more in revenues than average tax rates could yield.

Census data for 1979 show that New York's operating budget, with the inclusion of Federal revenue sharing funds, is one-third greater than average. However, only two functions receive above average shares of this large budget: the miscellaneous "other" category and public welfare. New York spends 15 percent of its budget on public welfare, in contrast to a national average of 12 percent. Higher education and highways get the smallest shares of the budget, with only 6 percent of the state's dollars directed to each of these functions. Higher education's share is one-third smaller than that allocated in most states, and it has not changed since 1975.

Higher Education Enrollments

New York residents are 12 percent more likely to enroll in higher education than are average U.S. residents. Ranking eighth nationally, New Yorkers attain this level of education because their rate of attendance at independent institutions--44 percent—is almost twice the national rate. Only four other states—Massachusetts, New Hampshire, Rhode Island, Vermont—and the District of Columbia exceed this share. About 12 percent fewer-than-average numbers attend public institutions in state, while an average number go out of state.

Not only is the level of enrollment by residents below average, but public institutions in New York draw only one-quarter as many nonresidents as is usually the case. As a result, the public sector enrolls approximately 20 percent fewer students than is typical, although above average rates of persistence and full-time study compensate to some degree. Still, public institutions enroll 23 FTE students per 1000 population versus a U.S. average of 29 per 1000.

New York's public system of education provides lesser emphasis on university studies and greater emphasis on 2-year institution studies than is typical. In addition, its comprehensive sector is larger than usual. Less than half the typical share of students are enrolled in universities, creating a relatively less expensive system of higher education to support. By contrast, the independent sector is more university and comprehensive oriented, thus representing a more expensive system to operate.

Institutional Finances and Characteristics

Although state support to public institutions in New York is 7 percent below average, enrollment levels are even lower (21 percent below average). As a result, appropriations per student in New York are 18 percent greater than average, with all sectors funded at rates close to or above average. Tuition revenues are also substantially greater than the norm, by 30 percent, thus creating a significant base of support for the public sector. In total, all public sectors except the public health professional and specialized institutions are funded at levels substantially above average (ranging from 15 to 113 percent), despite the fact that government grants and contracts, private gifts, and other E&G funding are markedly below average.

Independent institutions in New York are well funded by national standards, largely as a consequence of substantial tuition revenues and strong endowment income. Unlike the public institutions in New York, private institutions have been very successful in securing government grants and contracts. These schools receive 52 percent more per faculty member than do average U.S. independent systems.

Faculty salary increases in New York's public and independent sectors have not kept pace over the past 4 years with national trends. Despite these relative losses, faculty salaries at almost every major rank are substantially above the U.S. average.

Data Notes

1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state-funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here.

Postsecondary vocational technical education	$	
State boards and commissions	$	12,248,000
Retirement benefits (including social security)	$	
Fringe benefits	$	97,000,000*
Interstate contracts and reciprocity payments	$	
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$	
Centrally administered capital/debt service	$	
Other	$	

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$	87,400,000**
Current Funds revenues dedicated to capital purposes:		
—tuition and fees	$	147,500,000***
—auxiliary enterprises	$	28,200,000***
—other	$	

Tuition and Fees reappropriated by the state (yes or no) No

Other Comments

* Includes Social Security, unemployment insurance, workman's compensation, health insurance and pension benefits

** CUNY

*** SUNY
For SUNY institutions, debt service has first claim to tuition revenues. If there are funds remaining, they can be used for operating purposes.

NORTH CAROLINA

Recent Trends

Appropriations to public higher education institutions in North Carolina incrased by 43.9 percent between 1975 and 1979, with a 14.8 percent gain in 1978-79. Although this rate of growth in state funding is close to national patterns, North Carolina's gains were completely consumed by inflation and enrollment increases (at nearly three times the national rate). Thus the public sector had approximately 6 percent less than the average amount of state dollars per student with which to conduct higher education.

Although the overall profile of state funding is one of decline in spending power, for particular groups of institutions the picture varies. The universities and 2-year sectors suffered real dollar losses in state funding during this period, but all other sectors experienced some improvement. Inflation-adjusted revenues from tuition, however, were almost uniformly less in 1979 than they were 4 years earlier. Of the eight categories of public institutions examined in North Carolina, only the professional sector (representing the North Carolina School of Arts) showed real tuition revenue gains.

Given these mixed trends in state funding and tuition, total revenues (in real dollars per student) declined 6.4 percent overall. Again, though, there were significant differences in the funding of different groups of institutions. The Chapel Hill campus gained by 4.6 percent, the six comprehensive schools gained by 8 percent; the six baccalaureate campuses gained by 8.6 percent; and the School of Arts gained by 10.7 percent, all benefitting from real dollar per student increases. The remaining categories of public campuses saw their total revenues eroded at rates between 6 and 20 percent per student, with the 2-year campuses hardest hit.

State Financing of Higher Education

Despite these recent losses in the real dollar value of state funds, North Carolina funding per capita for higher education is still 14 percent greater than the U.S. average. The state allocated $99 per capita in 1979 for this purpose, placing North Carolina 18th among the states. North Carolina achieves this position through allocation of a far larger share of the state's tax derived funds to higher education than is typical, 17 percent in this state compared to 11 percent nationally.

These funds for higher education are distributed in fairly traditional shares, though state student aid receives a somewhat reduced portion (3 percent of the higher education budget) and ''other'' funding a somewhat higher portion (6 percent of the higher education budget). The remaining 91 percent of state funds are directly appropriated to the institutions, including a small amount for the independent schools.

State Tax Base and Budget

North Carolina collects 27 percent less than the average amount of tax revenues because of below average tax capacity (as measured by the state's level of economic activity) and below average tax rates. North Carolina is below average in all taxable categories except selective sales, public utilities property, and licenses. Its tax structure places above average emphasis on income taxes (individual and corporate), selective sales taxes, and taxes on death and gift transfers. Still, the overall tax rate is 12 percent lower than average, which, combined with its 17 percent lower tax capacity, produces tax revenues 27 percent lower than average.

As mentioned previously, in the distribution of the state's budget, higher education is given a larger-than-average share and, in relative terms, receives a 44 percent greater slice of this budget than that given by most states. Highways, health and hospitals, and elementary/secondary education also obtain more than a typical share of this budget, but at the expense of public services, public welfare, and other state services. And, although higher education is clearly a favored function in this state, even its share of the budget has dropped since 1975, moving from 14 to 13 percent of the budget.

Higher Education Enrollments

North Carolina's residents are 3 percent more likely to seek higher education than average. Although only half the typical number of residents go to other states for higher education, an above average number of residents matriculate in the state's public institutions and an average number go to private schools within the state. Enrollment at the state's public campuses is 5 percent larger than average, as a result of greater rates of enrollment by both residents and nonresidents.

Students in the public sector enroll proportionately more often at 2-year schools and less at universities than is generally the case. This greater emphasis on community and technical college education is reflected in a proportionately lower number of graduate enrollments in the public sector, suggesting that this public system of higher education is marginally less expensive to operate in comparison with others.

Institutional Finances and Characteristics

State appropriations per capita in North Carolina are 15 percent greater than average and support a 5 percent larger-than-average enrollment. Because appropriations are proportionately greater than enrollments in the public sector, state funding per student is favorable, providing 9 percent more appropriations than the average. Even more positive for the public sector is the fact that almost all categories of public institutions share in this favorable funding profile; only the University of North Carolina at Greensboro receives state funding at levels 10 percent lower than similar institutions in other states.

Tuition revenues in North Carolina are 31 percent lower than is typical and further encourage student enrollment. Revenues from other sources are above average and, in combination with state appropriations, create a level of total revenues 4 percent greater than the norm. Except for Greensboro and the 2-year campuses, all sectors operate with funds at or above average. Another important fact is that government grants and contracts are particularly strong at Chapel Hill.

Faculty salaries on average have not kept pace either with inflation or with faculty salaries in other states (between 1975 and 1979). Only Chapel Hill faculty are paid at rates that equal or are higher than those of faculty elsewhere. Greensboro faculty receive above average salaries at each rank, even though the all-ranks average is less than the norm. In all other sectors of North Carolina, rank averages and all-ranks averages are below the norm.

Data Notes

1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state-funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here.

Postsecondary vocational technical education	$
State boards and commissions	$ 34,458,463
Retirement benefits (including social security)	$
Fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$
—auxiliary enterprises	$ *
—other	$

Tuition and Fees reappropriated by the state (yes or no) Yes

Other Comments

* Yes, but amounts are not readily available

The University of North Carolina requested that it be noted that they were unable in the time provided by NCHEMS to verify the accuracy of data applicable to the sixteen campuses comprising the University nor any other institutions in the State of North Carolina. Therefore data contained here for the University of North Carolina and the State of North Carolina are not endorsed, as to their accuracy, reliability, completeness, or validity.

NORTH DAKOTA

Recent Trends

State and local funding of public higher education in North Dakota increased by 94 percent between 1975 and 1979. This rate of gain was more than twice the typical U.S. pattern and was surpassed by only one other state (Alabama). Enrollments also were growing rapidly during this time period, increasing by 14.5 percent, nearly two and a half times the average. All sectors of public higher education institutions gained in both appropriations and enrollments. Even after adjustments for inflation were made, all public sectors, except the general 2-year institutions, experienced gains in the per student purchasing power of their state monies.

Only tuition revenues at public institutions did not keep pace with inflation, falling on average by 18.3 percent in real dollars per student. Nevertheless, the gains in state funds and other sources were sufficient to accommodate both inflation and enrollment growth, and all sectors of public institutions showed real dollar expansion in their revenue budgets. These gains were greatest at the 2-year occupational institutions (37.8 percent), followed by the main campus of the University of North Dakota (26.5 percent), and then by the two professional/specialized campuses combined (18.5 percent). North Dakota State gained by 10.3 percent, the general 2-year campuses gained by 9.2 percent, and the two public baccalaureate campuses (Dickinson State and Minot State) gained by 5.5 percent. These gains in real dollar revenues per student placed North Dakota eleventh among the states in total funds improvements.

State Financing of Higher Education

In FY 1979, North Dakota spent $110 per capita for higher education, a level 27 percent above average. This rate of support, the 10th highest in the United States, is a direct result of the high allocation of tax revenues for higher education (17 percent of tax revenues, 50 percent above average). Most of these funds are channeled directly to the public higher education institutions. This means that of the $110 spent on higher education in North Dakota, $107 is allotted to public institutions. A small amount (less than 1 percent) supports student aid for students at state institutions and 2 percent is for other miscellaneous purposes related to higher education. No state support is given to the independent sector. This latter finding is not surprising since the state enrolls only one-quarter as many students at private institutions as is typical.

State Tax Base and Budget

North Dakota has a below average capacity to raise tax funds, ranking 32nd among the states. Additionally, because the state's lawmakers are reluctant to utilize this reduced capacity, residents are taxed at a rate 10 percent below average. The combined effect of low tax capacity and low effort is a tax pool 15 percent below average.

General sales tax capacity is the only major tax category in which North Dakota is above average (by 10 percent for a rank of 12th nationally). The state also ranks well in selected other tax categories (e.g., 1st in farm property, 5th in licenses, 10th in death and gift, and 14th in severance). However, these categories are not major revenue producers. The state's tax system does provide a major emphasis on corporate income, severance taxes, and licenses, but revenues in these areas cannot compensate for the generally low tax capacity and low tax effort in other tax categories.

North Dakota achieves its high rate of support for higher education by allocating a relatively large share of its budget to this function. Only highways receives a larger share in comparison to other states. In 1979, along with 17 percent of the tax revenues, 11 percent of the total state budget went to higher education. Although these shares are impressive, the total budget share has declined from 13 percent in 1975.

Public functions, which receives a substantially below average share of North Dakota's budget, includes health and hospitals, public welfare, and public services.

Higher Education Enrollments

North Dakota's sizable financial commitment to higher education is reflected in the enrollment rates of its citizens. Public institutions enroll 28 percent more residents than is typical, and these institutions are largely responsible for the high overall level of access achieved by residents. In addition, a relatively large number of residents go out of state to obtain a college education. The net result is a 12 percent above average rate of access for residents. This means that in North Dakota there are 37 FTE students per 1000, while the U.S. average is 33 FTE students per 1000.

Only 6 percent of the state's students attend independent institutions. As a result, North Dakota, with its strong public sector enrollments, is fifth among the states in its emphasis on public higher education.

The pattern of enrollment in public higher education in North Dakota is fairly similar to national patterns of enrollment in terms of institutional categories. There is one exception. On average, students in North Dakota are somewhat more likely to enroll in public baccalaureate institutions and less likely to attend public 2-year campuses. North Dakota's state system, however, enrolls one-third fewer graduate students than does the typical state, thereby creating a less expensive system of education.

Institutional Finances and Characteristics

North Dakota provides 38 percent more-than-average funding to public higher education and educates 46 percent more than the average number of students. But, because these high enrollments exceed state dollars, the per student level of appropriations in North Dakota is actually 5 percent below the national average. Tuition revenues are also below average in North Dakota, by 24 percent. However, revenues from private sources and other funds are above average at levels sufficient to redress much of the shortfall in state and tuition funds. Therefore, overall, the public sector in North Dakota operates with funds very close to national averages.

There are, however, significant variations in the funding profiles of the different categories of institutions. The University of North Dakota operates with 22 percent fewer dollars per student than similar universities nationally. By contrast, North Dakota State University operates with 50 percent more funds per student in comparison to other comprehensive institutions. However, its role as a land-grant institution is unusual for a comprehensive institution and somewhat skews the comparison. The remaining sectors of public institutions in North Dakota all operate with below average funding. The 2-year institutions are close to the U.S. average while the general baccalaureate and other professional institutions are funded at levels 8 and 9 percent below average, respectively.

Faculty salaries in North Dakota's public institutions showed major improvements between 1975 and 1979, increasing nearly 50 percent faster than faculty salaries in other states. All sectors shared in those gains. However, despite the gains, faculty in North Dakota still are paid salaries that average 12 percent below those in other states.

Data Notes

1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state-funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here

Postsecondary vocational technical education	$	
State boards and commissions	$	353,500
Retirement benefits (including social security)	$	
Fringe benefits	$	
Interstate contracts and reciprocity payments	$	1,080,000
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$	
Centrally administered capital/debt service	$	
Other	$	

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data

Debt service that is part of state and local appropriations to public institutions in the state	$	
Current Funds revenues dedicated to capital purposes:		
—tuition and fees	$	
—auxiliary enterprises	$	8,404,580
—other	$	

Tuition and Fees reappropriated by the state (yes or no) Yes

Other Comments

One time faculty salary adjustment of $228,776 was made and allocated to the campuses in reporting.

OHIO

Recent Trends

State and local appropriations to public higher education increased nearly 70 percent in Ohio between 1975 and 1979. This change in state support represented an impressive gain when compared to other states. Appropriations in Ohio grew more than 50 percent faster than did those in other states. During the same period, the number of students in the Ohio state system was also growing at above average rates. Nevertheless, the boost in appropriations more than covered enrollment increases and inflation in this period. Overall, the real dollar value of state funds for higher education expanded by 21 percent, a gain surpassed by only 12 other states.

Tuition increases, which did not keep pace with inflation and enrollments, experienced a slip of 2.6 percent overall in the public sector. Still, infusion of the improved state support was sufficient to create a 12 percent net gain in total revenues for the public sector. However, this overall gain was not universally distributed, and several sectors saw their funding bases eroded by inflation and enrollment growth. The health professional sector lost 24 percent; the general baccalaureates lost 12 percent; and the 2-year occupational schools lost 2.5 percent. On the other hand, significant funding gains were achieved by the research universities (Ohio State University and the University of Cincinnati, 30.2 percent). Funding improvements in the remaining sectors ranged from 5 to 7 percent in real dollars per student.

State Financing of Higher Education

Ohio spent $65 per capita for higher education in 1979, 25 percent below the U.S. average. This below average level of funding is most directly tied to the below average tax revenues in the state. But, it is also a consequence of higher education's smaller-than-average share of the state's low tax base.

The state's higher education budget includes a near average share for institutional appropriations, an unusually large share for debt service (nearly $6 per capita), and a public sector student aid program that is somewhat smaller than the norm. Most of the higher education dollars go to the public sector, with a small share channeled to both student aid and institutional support in the independent sector.

State Tax Base and Budget

Ohio ranked 17th among the states in 1977 in its capacity to raise taxes. However, its tax rate, which is among the lowest in the United States, creates a substantially lower-than-average level of tax revenues. Only six other states (Nevada, Texas, Oklahoma, New Hampshire, Florida, and Louisiana) have lower tax rates.

Ohio has above average tax capacity in six tax areas, with particularly strong potential in income and property tax categories. Its tax structure, however, is below average in nine of the eleven categories examined here and in all the important categories. In 1977, the state collected $6.8 billion in taxes, nearly $2 billion below average for Ohio's size and economic strength.

The composition of the state budget is fairly typical in its distribution of funds among different functions. Public services and elementary/secondary education did receive somewhat larger-than-average shares, but at the expense of highways and "other" miscellaneous services. Higher education's share was average in 1979, though it had declined since 1975.

Higher Education Enrollments

Ohio residents are about 15 percent less likely to attend college than the average U.S. resident. In fact, Ohioans are equally unlikely to attend public or private institutions in or out of state. On average, 28 residents per 1000 enroll in higher education compared to a national average of 33 per 1000. This places Ohio 36th among the states in its access rate for residents. Further, the state enrolls about 40 percent fewer nonresidents than is typical.

Seventy-five percent of Ohio's students are in public institutions, a percentage that mirrors the typical national pattern. But, more than 60 percent of these public students attend universities, a proportion that is nearly double the usual profile. This emphasis on university studies is also evident in the proportion of students studying at the graduate level—11 percent in total, a proportion more than one-quarter higher than usual. This situation requires high financial support in an environment where state funding is already low.

Institutional Financing and Characteristics

Appropriations (index 72) and enrollments (index 84) in Ohio's public system are both below average and because appropriations are even lower than enrollments, funding per student is 14 percent below typical levels. The two largest sectors, the research and other universities, despite recent real dollar improvements in state funding, still receive 25 percent less than similar sectors in other states. State funding for the 24 occupational 2-year schools is 29 percent below average on a comparative basis. By contrast, state support at the 24 general 2-year schools is 6 percent above average, creating a split pattern within the 2-year sector.

Central State University, the sole public baccalaureate campus in the state, receives 50 percent better-than-average appropriations, and the two health professional campuses combined are funded at levels 72 percent above average. The three comprehensive campuses in the public system receive 18 percent below average appropriations. In summary then, the distribution of state funds provides above average funding, by 6 to 72 percent, for three sectors but leaves four other sectors—including the two largest ones—with funding that is 18 to 29 percent below average.

Above average revenues from other sources, including tuition and private gifts, bolsters these profiles somewhat. The university indexes move from the mid 70's to the mid 80's; the comprehensives move to the average; and the 2-year occupational campuses move to an index of 88. Funding for the other categories of public institutions continues at substantially better-than-average levels.

Tuition revenues in Ohio are 65 percent above those generally seen elsewhere. While this is significant in improving funding for the state's public institutions, it is also a likely reason for Ohio's low rates of access. Surprisingly, despite an above average level of graduate enrollments in Ohio, government grants and contracts (index 84) and research activity (index 61) are substantially below usual levels.

Finances in the private sector are mixed, with the largest sector, the general baccalaureates, operating with funds 14 percent above average. All other sectors operate with less funding than their counterparts in other states. Two sectors, the research university (Case Western Reserve) and the 24 professional and specialized campuses, receive revenues at levels close to average.

Faculty salaries in Ohio are at or close to the average generally. Recent increases in the public sector have exceeded national trends, while those at independent institutions have trailed them. In both sectors there are variations by rank in comparative pay scales.

Data Notes
1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state-funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here

Postsecondary vocational technical education	$	
State boards and commissions	$	2,752,049
Retirement benefits (including social security)	$	
Fringe benefits	$	
Interstate contracts and reciprocity payments	$	
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$	
Centrally administered capital/debt service	$	65,100,000
Other	$	

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$
—auxiliary enterprises	$
—other	$
Tuition and Fees reappropriated by the state (yes or no)	No

Other Comments

The following functions were performed centrally and then allocated to the campuses for reporting: health program, OSU cooperative extension, educational TV, labor education, police/fire protection, displaced homemakers program, and Ohio Agriculture Research and Development Center.

* Rental payments to Ohio Public Facilities Commission

OKLAHOMA

Recent Trends

State funding for public higher education in Oklahoma made major strides forward between 1975 and 1979, increasing by 85 percent, a rate nearly 80 percent better than the national average. The need for such funds also grew during this period, with enrollments increasing by 10.5 percent. Still, the gains in appropriations were sufficient to accommodate both inflation and enrollment growth, netting a 28 percent real dollar expansion in state funding for higher education. It is particularly worth noting that all categories of public institutions shared in these increases, ranging from an 8 percent gain at Oklahoma State University (OSU) to a 60 percent gain at the state's 2-year occupational campus, Oklahoma State University-Oklahoma City.

Increases in tuition and fees revenues were not commensurate with increases in inflation and enrollments between 1975 and 1979 and, on average, shrank in value by 8.6 percent. Still, propelled by the gains in state funding, total revenues in the public sector grew by 10.5 percent. These funding gains were universally evident, except at OSU, where the real dollar value fell by nearly 9 percent per student. Although OSU gained substantially from state revenues, these funds were more than counterbalanced by an 18 percent increase in the number of students to be supported. The other sectors of public institutions in Oklahoma had real dollar rates of funding growth ranging from 10 percent at the University of Oklahoma to 24 percent at the 2-year occupational institutions.

State Financing of Higher Education

Tax contributions for higher education in Oklahoma totaled $208 million in 1979, a $74 payment per citizen. This level of support is approximately 15 percent below the typical taxpayer load in other states and can be attributed to the state's low tax effort. Although Oklahoma is somewhat above average in wealth, the state is reluctant to utilize that capacity. Therefore, a relatively reduced level of tax revenues is collected. Higher education obtains a larger than usual share of Oklahoma's tax pie, but because the total amount of tax revenues is so low (26 percent below average), this rather high contribution is still comparatively low.

Of the $74 per capita spent on higher education in Oklahoma, $69, or 94 percent, goes directly to public institutions in the form of appropriations. Another $4 per capita supports "other" higher education functions, primarily vocational education and the education centers/televised instruction. The remaining funds, less than $1 per capita, provide state funded student aid.

State Tax Base and Budget

Oklahoma's capacity to raise tax funds, as indicated by the amount of economic activity in the state, is somewhat better than average. The state is particularly strong in corporate income, severance related activities, public utilities property, and selective sales. However, the rate of taxation in Oklahoma is among the lowest in the United States, with only Nevada and Texas having lower tax rates. Oklahoma ranks very low in all major categories (general and selective sales, income taxes, and property taxes), though the state does make heavy use of severance taxes, death and gift taxes, and taxes through license charges. The net effect of near average capacity (index 103) and a very low tax rate (index 72) is $576 per capita in tax revenues, a level 26 percent below average (index 74).

The state's use of these funds indicates a major priority for higher education, a function which gains a one-third larger-than-average share of the budget. Highways, public welfare, and elementary/secondary education are also favored state activities, in descending order. Health and hospitals, public services, and other functions, by contrast, receive below average shares of this state's budget, which is 15 percent smaller than average even after the addition of funds from other sources (e.g., Federal revenue sharing funds and other nontax sources of state revenues). A comparison of higher education's budget share in 1979 with its share in 1975 also indicates that higher education has been increasing its share of the state budget.

Higher Education Enrollments

The state's emphasis on higher education is also evidenced in the participation rate of residents, particularly in the state's public institutions. Despite a lower rate of access to private institutions in the state (index 50) as well as institutions in other states (index 50), the strong enrollment of Oklahoma residents in public institutions within the state (index 120) creates an overall access level that is above average (index 103). In addition, about 20 percent more than the average number of nonresidents enroll in Oklahoma's public higher education system. As a result, total enrollment in public institutions is 19 percent greater than average, with 34 FTE students per 1000 population. The U.S. average is 29 FTE per 1000.

Enrollments in Oklahoma's public sector represent 85 percent of all students enrolled in the state. An above average share of public students attend the two universities (Oklahoma State University and the University of Oklahoma) and the eight baccalaureate institutions. As a result, fewer students are enrolled in the comprehensive and 2-year campuses. In total, though, the state's public institutions support about 23 percent fewer graduate students than is typical, thus lessening the pressure on state resources.

Institutional Finances and Characteristics

Despite the recent gains in Oklahoma's state funding, the level is still below average, both in absolute terms per capita and in relationship to the large numbers of students enrolled in the public sector. In essence, Oklahoma is educating 19 percent more than the average number of students with 11 percent less-than-average in state funds. The result is a level of per student appropriation that in 1979 was $2019, 25 percent below the average of other states. By institutional sector, the profile was generally even lower, with the health professional campus being funded at 47 percent below average, Oklahoma State being funded at 46 percent less per student than similar institutions elsewhere, and the two comprehensive institutions (Central State and Southwestern Oklahoma) being funded at 37 percent below average. No group of public institutions received state funds at even close-to-average levels, and, unfortunately, revenues from other sources did not compensate. In total revenues, Oklahoma's public institutions operate with funds 28 percent below average, while some individual groups of schools function with funds between 18 percent and 51 percent below average on a per student basis.

Faculty salaries follow the state's general financial profile as a result of major recent gains, but not at levels that bring average salaries in line with those elsewhere. Overall, despite improvements that were almost 30 percent greater than average, overall faculty salaries in Oklahoma are 12 percent below average. They are lowest at the University of Oklahoma and the general 2-year campuses (both 22 percent below average). The remaining sectors are all below average, but within 10 percent of that average.

OREGON

Recent Trends

Between 1975 and 1979, state and local appropriations to public higher education institutions in Oregon increased by 54 percent, totaling $231 million. This gain compared favorably to those in other states, where such funds typically grew by 47.7 percent. This improvement in state support was of particular benefit to public institutions, because enrollments fell by nearly 1.4 percent during this period. As a result, the drive forward in state funds netted a real dollar per student gain of 19.8 percent for the public sector. All categories of public institutions experienced net gains in state funding, excet the University of Oregon's Health Science Center.

Oregon's tuition revenues, after adjustment for inflation, also improved considerably during this period, providing a 16.4 percent gain in funds. Given the combination of growth in both appropriations and tuition, total revenues gained 19 percent in real dollars at public institutions in Oregon. Most encouraging was the fact that all but one category of public institution benefited from these gains, ranging from a high of 31 percent in the specialized/professional campuses to a low of 11.9 percent at the public baccalaureate institutions. Real dollar funding at the Health Science Center, however, was diminished by 10.7 percent.

State Financing of Higher Education

In fiscal year 1979, Oregon spent $105 per capita for higher education, a rate 20 percent above average. This positive level of funding resulted from the allocation of a 25 percent larger-than-average share of state tax revenues to higher education. Most of these funds go directly to public institutions in the form of appropriations, with some state funds given to the private institutions. Oregon also provides student aid to both sectors, though the level is about half the size typically accorded state student financial aid. The remaining state funds go for "other" purposes such as continuing education, public broadcasting, and support of the state's coordinating commission. These "other" activities equal 5 percent of the higher education budget, a typical proportion.

State Tax Base and Budget

Oregon is slightly above average in its capacity to raise tax funds and ranks 21st among the states. Economic activity in six of the eleven tax categories is above average, and Oregon is particularly strong in sales taxes (general and selective), individual income, and residential property—all of which are important tax categories. Its rate of taxation is 5 percent below average, largely because the state had no sales tax in 1977. As a result, Oregon's tax revenues were about 3 percent below average.

Higher education receives a large share of the state's budget, particularly in comparison with other states, even though this share fell somewhat between 1975 and 1979. By contrast, health and hospitals and public welfare are low priority public activities and receive below average shares of the state's budget. All other functions are funded at or above the average.

Higher Education Enrollments

The budget priority accorded higher education in Oregon is reflected in the state's high rates of participation. Residents of this state are 12 percent more likely to enroll in higher education than average U.S. residents. Only four other states (California, Massachusetts, Arizona, and Washington) have higher rates of participation. This high degree of access is achieved through the state's public system of higher education. The rate of entrance by first-time residents is 80 percent greater than average. In addition, Oregon's public institutions attract a large number of out-of-state students (index 176).

Higher education in Oregon is distinctly public in nature, with 86 percent of all students enrolled at public institutions. The private sector in the state is slightly more than half the size typically found in the states.

The 2-year sector in Oregon enrolls an unusually large proportion of public students, 43 percent. The comprehensive sector (Portland State and Southern Oregon State), by contrast, is much smaller than usual. Given this greater emphasis on 2-year institutions and the lesser focus on graduate enrollment, Oregon's public system of education is somewhat less expensive to operate than the average state system.

Institutional Finances and Characteristics

Although Oregon provides substantial tax support per capita for higher education, as a result of high levels of enrollment in the public sector, state funding per student is diluted to a level somewhat below the U.S. average. This is especially true for the universities and comprehensive institutions, which receive state funds that are 11 to 32 percent below average. By contrast, the baccalaureate institution (Eastern Oregon State) and the general 2-year campuses (not the 2-year occupational schools) were funded by the state at levels 22 percent above average.

Tuition revenues are 13 percent above average, though revenues from other sources—except government grants and contracts—are below usual levels. As a result, total revenues per student (excluding grants and contracts) were $3759 in 1979, a level just 3 percent below average. However, revenue profiles of the different groups of institutions were very uneven. The general 2-year campuses were most successful in garnering resources, collecting 21 percent more funds per student than is typical. The University of Oregon was the least successful in obtaining revenues and so functions with 24 percent funding less than is typical. In addition, Oregon State (index 93), the two comprehensive institutions (index 88), and the two specialized campuses (index 95) all operate with below average support.

Faculty salaries have improved substantially during this period in comparison to those at other institutions. These gains brought Oregon's public system to the national average. Surprisingly, the all-ranks average salary was lowest at the general 2-year campuses, the best funded sector in the state, while faculty salaries at Oregon State were also below average.

Data Notes

1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here.

Postsecondary vocational technical education	$
State boards and commissions	$ 7,199,931
Retirement benefits (including social security)	$
Fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other Continuing Education, Educational and Public Broadcasting Service	$ 4,364,739

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 6,335,864
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$ *
—auxiliary enterprises	$
—other	$
Tuition and Fees reappropriated by the state (yes or no)	No

Other Comments

* These revenues do not come into current funds. Fees pay for student activity buildings, not education related buildings.

Source: Oregon Educational Coordinating Commission

PENNSYLVANIA

Recent Trends

Between 1975 and 1979, Pennsylvania had one of the smallest increases in state and local support for higher education. (Only four other states provided a smaller change in funding.) While enrollment gains were somewhat less than the average and reduced the need for such state support somewhat, the pressure of inflation did not. The end result was a net loss of 7.1 percent in real dollar state funding per student. Although significant tuition gains helped meet funding requirements, the buying power of the public sector (for 61 institutions) declined by almost 2.2 percent, in constant dollar terms per student. The independent sector (with 116 institutions), in contrast, experienced a 6.3 percent improvement in its E&G revenues per student, even after adjustments for inflation and enrollment growth. Even with the overall pattern of losses in the public sector and gains in the independent sector, there were substantial variations in trends within individual segments. For the publics, for instance, despite decreases elsewhere, improvements were generally evident in the university, and health professional sectors. In the independent sector, the University of Pennsylvania, the baccalaureate colleges, and the 2-year schools were generally able to keep pace with inflation; the remaining sectors showed losses. Despite these recent declines in purchasing power, most institutional segments in Pennsylvania function with funds near or above typical U.S. levels. The health professional institutions are the exception.

State Financing of Higher Education

Pennsylvania ranks 49th in the nation in per capita support for higher education, funding it at rates 40 percent below average. Enrollments are nearly as low as funding, with the public sector educating 35 percent fewer students than is typical. The net effect on state and local per student support is mixed, with substantial differences between sectors—some above and others below national rates.

As a result of Pennsylvania's concern with both public and private higher education—42 percent of Pennsylvania's enrollments are in independent institutions—the state provides student aid and direct institutional support to both sectors. Twelve percent of state higher education funds are channeled directly to students in the form of student aid; this is three times the national rate. The remaining 88 percent is provided to institutions as institutional appropriations. Public institutions receive $43 per capita in institutional support from the state and private institutions receive $4 per capita.

State Tax Base and Budget

Pennsylvania is near the median in its ability to raise funds for public purposes, with close to average tax capacity overall. Property tax categories (excluding farm property) are the only primary tax sources with larger than average capacity. Yet Pennsylvania's tax rates are low in these areas. Overall, they tax at slightly below average rates, with the result that tax revenues are 8 percent below average. They direct only 5 percent of these funds to higher education, a share that is half the usual slice. Priorities in Pennsylvania's budget continue to be elementary/secondary education, public welfare, and other general services.

Higher Education Enrollments

Residents of Pennsylvania pursue higher education at much lower rates than those in other states, averaging 27 out of every 1,000 population; in comparison, the national average is 33 per 1,000. Despite an ample pool of high school graduates, a relatively small proportion of this number chooses public institutions, and more than the usual number attend private institutions. Pennsylvanians migrate to other states in typical numbers, but only half the average number of students from other states come to Pennsylvania's public institutions. Once enrolled, however, students are retained at typical rates and tend to take larger average course loads. The net impact of these conditions is a public sector 35 percent smaller than the norm. The institutional mix in the public sector in Pennsylvania mirrors the national pattern, with a slightly greater emphasis on university education and a lesser emphasis on 2-year institutions.

Institutional Finances and Characteristics

Although state support per student in Pennsylvania is 15 percent below average, public institutions generally operate with funds close to or above national levels, largely as a result of high tuition revenues. Public institutions in this state rely twice as much on tuition as is customary. The single major exception in this support profile is the health professional sector, which despite high tuition, operates with funds 30 percent below the norm.

Broad sector comparisons indicate that independent institutions in Pennsylvania are generally well funded, with the exception of the health professional institution and the research university without a medical program (Carnegie Mellon University).

In general, salary levels by rank are at or above typical levels in both the public and private sectors. However, between 1975 and 1979 salary increases varied substantially in both sectors by institutional category. The public universities and 2-year institutions experienced major gains, whereas increases in the public comprehensive, baccalaureate, and specialized institutions were approximately 10 percent below average.

Data Notes

1978-79

Additional State and Local Government Funding for Higher Education

Funds not flowing through institutional accounts and hence not recorded, except state funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here.

Postsecondary vocational technical education	$
State boards and commissions	$ 134,575
Retirement benefits (including social security)	$
Fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 9,492,828
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$
—auxiliary enterprises	$
—other	$
Tuition and Fees reappropriated by the state (yes or no)	Yes

Other Comments

The Pennsylvania Department of Education staff indicated that the enrollments reported in this study reflect FTE enrollments not headcount enrollments. Headcount enrollments were 481,347 in 1978, a figure that is 104,021 larger than the FTE figure used in this study.

Source: Pennsylvania Department of Education

RHODE ISLAND

Recent Trends

State and local appropriations for public higher education in Rhode Island increased by 38.6 percent between 1975 and 1979, 19 percent below the national average increase. At the same time, enrollment in public institutions grew by 8.2 percent, a rate almost 40 percent higher than the national pattern. The net result was a 2 percent decrease in real dollar appropriations per student. The University fared much better than the public sector as a whole, however, with strong net gains per student in both appropriations and tuition revenues. The result was an increase at the University in total E&G revenues per student that was nearly 50 percent above average and represented a 10 percent gain in real dollar revenues per student. The comprehensive institution (Rhode Island College) had a 13 percent loss in purchasing power and the 2-year school (Rhode Island Junior College) had a 9 percent loss.

In the private sector, by contrast, the Brown University's total E&G revenues per student declined 4.6 percent in real dollar terms, while net revenues increased for private comprehensive and baccalaureate institutions. Enrollment increases of 14 percent in the private sector were about 20 percent higher than average.

Financing of Higher Education

Rhode Island spends $72 per capita for higher education, a level 18 percent below the national average. All of the expenditures are in the form of direct institutional support, and 98 percent of that support goes to the public sector.

State Tax Base and Budget

Rhode Island compensates for a tax capacity that is 13 percent below the national norm with a tax effort that is 14 percent above the norm. The net effect is a level of tax revenues that is right at the national average, $779 per capita. The state's tax capacity is very nearly the lowest for farm, public utilities property, and severance taxes, and above average only for licenses and residential property. The largest sources of tax revenues are residential property, general sales, and selective sales taxes, which when combined produce 60 percent of Rhode Island's tax revenues.

Elementary/secondary education at 26 percent, public welfare at 17 percent, and public services at 10 percent receive the largest shares of state and local expenditures, while higher education receives only 8 percent. The share going to higher education, which decreased from 10 percent in 1975, is now below the national norm.

Higher Education Enrollment

Residents of Rhode Island attend higher education institutions at rates 6 percent below average. The low overall attendance rate is the result of a relatively low rate of attendance at public institutions in the state, 20 percent below average. Relatively high rates of attendance at private institutions, 33 percent above average, and substantial out-migration of students to colleges in other states, at rates 50 percent above the norm, do not compensate for this loss of public sector attendance in Rhode Island.

Less than half the students in the state are in public institutions. Overall enrollments at public institutions are 13 percent below average, despite substantial in-migration of students from other states. Nearly half the students in the public sector are enrolled at the university level (the University of Rhode Island); the rest are split between the comprehensive institution (Rhode Island College) and the 2-year institution (Rhode Island Junior College).

The private sector enrolls 52 percent of all higher education students in Rhode Island, a percentage that is twice the norm and third highest in the nation. A major reason for the high ranking is the substantial in-migration of out-of-state students to the private sector, a rate five times the average and second highest among the states. Just under one-third of the private sector students attend at the university level, while 39 percent attend other professional schools. An average number of graduate students are enrolled in the public sector, while a relatively small number are enrolled in the private sector.

Institutional Finances and Characteristics

Rhode Island's public institutions vary in their funding levels. The 2-year schools, when compared with similar institutions elsewhere, are well supported, operating with 18 percent more funds per student than is typical. The baccalaureate institution has funding slightly above national levels. In contrast, the University of Rhode Island operates with funds 10 percent below the average for similar schools. Tuition is an important source of funding at both the university and the 2-year school, and at the University of Rhode Island government grants and contracts are above average. At both the University and Rhode Island College, expenditures per student are just below the norm for instruction, but well above the norm for academic support. The opposite condition prevails at the 2-year institution.

In the private sector, revenues at Brown University are above average, by 22 percent for tuition per student, 40 percent for private gifts and grants per student, and 27 percent for government grants and contracts per faculty member. Still, revenues at Brown are 6 percent below average for similar private universities. By contrast, Rhode Island's other 4-year private colleges receive, on average, less than typical amounts of revenues in those same categories. Faculty salaries are about average in both public and private sectors, except at Brown, where overall salaries are 16 percent above average rates.

There are 10 private institutions in Rhode Island and three in the public sector. While most of the institutions are comparatively small, Rhode Island Jr. College, Providence College, and the three professional and specialized schools are considerably larger than similar institutions across the nation.

Data Notes

1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state-funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here.

Postsecondary vocational technical education	$
State boards and commissions	$
Retirement benefits (including social security)	$
Fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g. computer services, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$
—auxiliary enterprises	$
—other	$
Tuition and Fees reappropriated by the state (yes or no)	

Other Comments

Source: No data notes were supplied by the state Higher Education agency/commission.

SOUTH CAROLINA

Recent Trends

State and local appropriations for public institutions in South Carolina increased by 59.2 percent between 1975 and 1979, a rate one-quarter greater than the national average. The corresponding enrollment growth, 20.6 percent, was more than three times the national rate. The large upswing in enrollment meant that in constant dollars the net gain over the period in both state funding and total E&G revenues per student was quite small, 1 percent in each case. The comprehensive, baccalaureate, and health professional institutions actually experienced small declines in total purchasing power, 5.1, .7, and .1 percents respectively. During the same period in the public sector, revenues from tuition and fees jumped 7 percent in constant dollars per student, a rate more than twice the national norm. The increase was especially large at the university, comprehensive, and 2-year occupational institutions and helped compensate for inflation, as well as for the large jump in FTE enrollments in the state.

The private sector, which had an above average rate of enrollment growth (index 156), experienced a small decline of 2.5 percent in the per student purchasing power of revenues. Two-year private institutions, however, in contrast to the overall profile for private institutions in South Carolina, enjoyed a net gain of 16.4 percent in E&G revenues per student. The other professional/specialized private institutions fared even better, achieving a 31 percent gain in constant dollar revenues per student. In sum, then, given inflation and enrollment growth, funding needs in South Carolina were substantial between 1975 and 1979. Although the public sector made small gains in general (although some sectors experienced losses), the privates were unable to provide for these needs and, except for the 2-year sector and professional sector, found themselves losing ground financially.

State Financing of Higher Education

South Carolina spends $96 per capita on higher education, a level 11 percent above the national average. Ninety-six percent of these expenditures are allocated to public institutions, primarily in the form of direct institutional support. Through student aid, 3 percent of the state's funds for higher education support students enrolled at private institutions. There is no similar aid program for students in the public sector.

State Tax Base and Budget

South Carolina collects $528 per capita in state taxes, a level 32 percent below the norm. The comparatively low revenue results from a tax capacity 23 percent below average and is compounded by a low tax effort statewide (13 percent below average). South Carolina's tax capacity is well below average in all but one category, public utilities property, and it is the lowest in the nation in general sales tax, a traditionally important source for state revenues. Nonetheless, the latter is the largest single source of funds for the state, followed by individual income taxes and selective sales taxes.

Elementary/secondary education receives the largest portion (30 percent) of direct general expenditures by state and local governments in South Carolina, 30 percent. Health and hospitals follow at 14 percent. The share going to higher education, 13 percent of the budget, is 44 percent above average, and places South Carolina's per capita expenditures for higher education above national levels, a considerable achievement in view of the state's overall revenue picture. Also noteworthy is the gain in higher education's share of the state budget, growing from 10 percent in 1975 to 13 percent in 1979.

Higher Education Enrollments

South Carolina residents participate in higher education in below average numbers. They attend their own private institutions at typical rates, but fewer than average attend public institutions in-state or out-of-state institutions. At the same time, in-migration to South Carolina's public institutions is 36 percent above average. Total enrollment per capita in public institutions is just below national levels; and, if not for a comparatively low retention rate, enrollment would be above average. South Carolina has 28 FTE students per 1,000 capita enrolled in its public institutions, with a larger-than-average proportion of them at graduate levels. Universities represent almost 40 percent of the enrollment in the public sector, while the number of students in 2-year occupational institutions is greater than in comprehensive and baccalaureate institutions combined. In the private sector, 51 percent of the enrollment is concentrated in baccalaureate instiutions, and 26 percent in comprehensive institutions. Overall, South Carolina's public sector enrolls 76 percent of the higher education students, a typical rate nationally and in neighboring states.

Institutional Finances and Characteristics

On a per student basis, state and local appropriations for public higher education in South Carolina are 21 percent above average, and the state's public institutions rely more heavily than usual on these revenues. Despite the fact that tuition revenues are below average for public institutions, as a group, these institutions do better than average in total E&G revenues per student (excluding government contracts). For instance, Clemson University has 44 percent more revenues per student than do typical institutions in its group, primarily because of above average state funding. The comprehensive institutions receive funds at 11 percent above the average, and the Medical University of South Carolina receives funds at 5 percent above the national average for such schools. The University of South Carolina is within 2 percent of the average for similar schools, and the public general baccalaureates are within 4 percent of the average. Only the 2-year occupational schools operate with funds significantly below group norms, 27 percent below. In general, though, given the low state revenues, state funding for higher education in South Carolina is impressive.

The private sector in South Carolina is not financed as well as the public sector, comparatively speaking. Total E&G revenues per student (excluding government contracts) are 42 percent below the norm for the private sector as a whole. Tuition revenues per student are 35 percent below average, even though dependence on tuition, which represents 60 percent of all revenues, is above average. There are a total of 61 institutions in South Carolina, of which 33 are public. Clemson is small for its type, while the University of South Carolina is larger than average for schools with similar missions. Faculty salaries in public institutions are below average, and particularly so in the 2-year institutions. Faculty salaries in the private sector are generally 10 percent lower than national rates for similar types of institutions.

1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state-funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here.

Postsecondary vocational technical education	$ 1,954,867	(8,643 FTE Students)
State boards and commissions	$ 738,774	
Retirement benefits (including social security)	$	
Fringe benefits	$	
Interstate contracts and reciprocity payments	$ 801,620	
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$	
Centrally administered capital/debt service	$	
Other	$	

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$ 13,175,503
—auxiliary enterprises	$ 2,532,395
—other	$
Tuition and Fees reappropriated by the state (yes or no)	No

SOUTH DAKOTA

Recent Trends

Between 1975 and 1979, gains in state and local appropriations to the public sector were almost entirely consumed by enrollment growth and inflation. The small net gain of 2.2 percent in real dollar state funding was about one-third the national level. And, not all segments fared equally well. While the University of South Dakota experienced a 19.5 percent net gain and South Dakota State had a net gain of 5.1 percent, the three baccalaureate institutions, during the same period, received 14.5 percent less in state support per student.

Real dollar revenues per student from tuition and fees also fell in the public sector, except for the University and the specialized institutions. Nonetheless, in total E&G funding, all segments except the baccalaureate institutions enjoyed above average gains after adjusting for inflation and enrollment growth. Unit revenues at the baccalaureate institutions declined in part because of a 18.9 percent increase in enrollment.

The private sector suffered a major loss of nearly 20 percent in purchasing power, due to a 32 percent enrollment increase coupled with a real dollar decline in per student tuition revenues. Only the private 2-year institution, Freeman Junior College, managed to stay ahead of inflation and enrollment shifts.

Higher education's' share of the state budget improved even further over this period, and in 1979, according to Census Bureau figures, it laid claim to 13 percent of all state expenditures, a profile 44 percent better than average. When tax revenues alone are referenced, however, higher education's share is right at the national average.

State Financing of Higher Education

South Dakota spends $66 per capita for higher education, a level 24 percent lower than the norm and 44th in the nation. Ninety-eight percent of the expenditures are in the form of direct support to institutions. Less than 1 percent of state funds are provided for student aid, and no state funds go to the independent sector.

State Tax Base and Budgets

South Dakota raised $604 per capita in state taxes, a level 23 percent below the national average. The comparatively low revenues are the result of both below average tax capacity (13 percent below) and below average tax effort (11 percent). Although South Dakota is among the 10 poorest states nationally, it does have above average tax capacity in several categories, including general sales, farm property, licenses, and death and gift taxes. The bulk of its tax revenues come from general and selective sales and from property taxes. The state does not have a personal income tax.

State spending for highways went down from 19 percent of the budget in 1975 to 17 percent in 1979 but, even with this decrease, South Dakota still spends almost twice as much of its budget on highways as do other states. In 1979 elementary/secondary education received the largest share of the state budget for any function, 26 percent. This was, however, down from 28 percent in 1975. Higher education's share increased from 11 to 13 percent during the same period. This means that at current levels, the proportion of the state's budget allocated to higher education is 44 percent above the national average.

Higher Education Enrollments

Thirty-one of every 1,000 residents of South Dakota attend higher education, a level close to national rates of access. This enrollment level is achieved despite a somewhat lower-than-average attendance rate at public institutions in the state, a situation largely due to residents' high rates of attendance at institutions outside South Dakota. This migration out of state is offset by substantial numbers of residents of other states attending South Dakota's institutions. As a result, enrollment at public institutions is comparable to national rates, with 29 FTE students per 1,000 capita matriculating.

Public institutions account for 72 percent of the higher education enrollment in South Dakota, although there are more private than public institutions in the state (11 and 7 respectively). South Dakota's mix of public enrollments is unusual in that the state has no public 2-year institutions. (Typically, states enroll 36 percent of their students in such institutions.) On the other hand, South Dakota enrolls 28 percent of its students in three baccalaureate institutions, a marked contrast to the national pattern in which only 5 percent of public students are enrolled in this sector. South Dakota also has somewhat fewer students at its university, 28 percent versus the national average of 31 percent, and somewhat more students at its comprehensive institution, South Dakota State (32 versus 26 percent nationally).

The private sector in South Dakota, which enrolls 28 percent of the students in the state, has 7,511 FTE enrollees. Fifty-nine percent of these students are enrolled in one of the seven baccalaureate institutions, and 37 percent are enrolled in one of their two specialized institutions. On a percentage basis, between 1975 and 1979, private enrollments increased at a rate more than three times faster than public enrollments. Total enrollment in the state, at 27,240 FTE students, is among the smallest in the nation.

Institutional Finances and Characteristics

Overall, public institutions in South Dakota are funded at slightly above average rates. However, there are striking differences in funding among the various types of institutions. South Dakota State, the comprehensive institution, receives $5343 in E&G revenues per student (excluding government grants and contracts), a rate 60 percent higher than average for such schools. The University of South Dakota, a relatively small doctoral institution (medical), receives $4030 per student, a rate 25 percent below the norm for such schools. The three baccalaureate institutions, at $2629 per student, are 16 percent below average in their total per student funding.

These differences in funding occur across each source of funds. South Dakota State also does well in obtaining revenues through government grants and contracts, with a rate per faculty member that is 56 percent above average. These differences in funding are reflected in the research expenditures of South Dakota State; their faculty do considerably more individual research than is typical of schools in this category. (In part, these differences reflect the fact that South Dakota is the land-grant institution in the state and different therefore in many ways from the other comprehensive institutions with which it is grouped.) Instruction expenditures per student do not follow these patterns. Each of the public sector institutions in South Dakota, except the specialized ones, spends approximately 25 to 35 percent below average for instruction. For most public institutions in South Dakota the proportion of expenditures going to academic support and public service is well above average.

Independent institutions in South Dakota vary substantially in their per student funding. The 2-year institutions operate with a considerably greater amount of funds than other similar schools, whereas the baccalaureate institution and the specialized schools are funded at rates below national patterns by 13 percent and 47 percent, respectively.

Faculty salaries in both the public and private sectors are substantially below average in all ranks and in all types of institutions, despite recent gains at national rates of increase.

Data Notes
1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state-funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here.

Postsecondary vocational technical education	$
State boards and commissions	$ 403,296
Retirement benefits (including social security)	$ 302,904
Fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$ 62,000
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 99,480
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$ 4,188,826
—auxiliary enterprises	$
—other	$ 732,000*
Tuition and Fees reappropriated by the state (yes or no)	Yes

Other Comments

* Includes deferred maintenance funds (general funds and higher education facilities fund)

TENNESSEE

Recent Trends

Between 1975 and 1979, enrollments in Tennessee's public colleges and universities grew at nearly twice the rate experienced nationally. In combination with inflation, the 11.4 percent increase in students consumed a substantial part of the above average increase in state and local appropriations, creating a net gain of 8.1 percent in constant dollar appropriations per student. The doctoral and comprehensive institutions fared much better than the public sector as a whole, with net gains of 27.6 and 20.3 percent, respectively. A downturn in tuition revenues per student (constant dollars) was universal in the public sector, represented by a loss of nearly 11 percent. Total E&G revenues in real dollars per student showed small gains of 3.4 percent overall for the public sector, but conditions varied considerably among the different institutional categories. Only Memphis State University, the six comprehensive institutions, and the health professional institution, University of Tennessee-Health Science Center, made significant net gains. The two general baccalaureate campuses and the nine general 2-year schools made only small gains against inflation and enrollment changes. The University of Tennessee at Knoxville and the four 2-year occupational schools found their financial positions eroding in real dollar terms per student. Total E&G revenues in constant dollars fell by a small amount at UT Knoxville, .7 percent, and by a substantial amount at the occupational schools, 22.2 percent.

During the same period, private institutions in Tennessee had slightly above average gains in enrollment, a slight net increase in constant dollar tuition revenues per student, and a substantial 8.8 percent net increase in the real dollar value of their E&G revenues. The latter figure was nearly three times the national average. However, there were marked differences among the various institutional types, and four sectors actually experienced a net loss in purchasing power.

Although there were real dollar gains in state support to public higher education, the proportion of state and local expenditures devoted to higher education actually declined slightly between 1975 and 1979 (from 11 to 10 percent), though the proportion still remained above the U.S. average.

State Financing of Higher Education

Tennessee spends $74 per capita for higher education, a level 15 percent below average and 32nd among the states. Of those expenditures, 82 percent goes toward direct institutional support, 1 percent goes to student aid, and the remaining 17 percent goes for indirect support (primarily a state retirement fund). Just about all (99 percent) of the state's support to higher education is channeled to the public sector, with only a small share of state funds aiding students attending private institutions.

State Tax Base and Budgets

Tennessee falls below the national average in both tax capacity and tax effort on a per capita basis. Accordingly, state and local tax revenues per capita, at $538, are 31 percent below typical levels, placing Tennessee among the five poorest states in their funding of public services. The state ranks 46th in overall tax capacity, and does not exceed average capacity in any individual tax category. Tennessee's tax effort is relatively high with respect to general sales, licenses, corporate net income, and death and gift taxes. The major revenue sources are general sales taxes, which, along with selective sales, and residential and commercial property taxes, account for about 80 percent of total revenues.

Highways (index 133), health and hospitals (index 122), and higher education (index 111) are priority state functions in Tennessee at the expense of public services (index 91), public welfare (index 92), and "other" (index 91) miscellaneous functions. Elementary/secondary education receives a typical budget share. Although higher education continues to be a preferential state activity, its share of the state budget has declined since 1975.

Higher Education Enrollments

Residents of Tennessee attend higher education at a rate of 27 students per 1,000 population, 18 percent below national norms. These low participation rates apply to Tennessean students attending public, private, and out-of-state institutions. These below average attendance rates combined with a slightly lower-than-average enrollment of out-of-state students in public institutions result in a student pool in the public sector that is 10 percent below that of most states. Tennessee has 26 FTE students per 1,000 in its public system compared to the national profile of 29 per 1,000.

On the other hand, out-of-state enrollments in Tennessee's private institutions are 51 percent above average, compensating for low resident enrollment and creating a private sector that is 5 percent larger than average. Enrollments in Tennessee are therefore slightly more oriented toward the private sector than is typical.

Public enrollments are concentrated in the two state universities at 37 percent, followed by the comprehensive institutions at 33 percent, and the 2-year schools at 22 percent. A slightly greater proportion of students are studying at graduate levels, 9 percent. Private enrollments are highly concentrated in baccalaureate institutions, 56 percent. Between 1975 and 1979, public enrollments grew at rates just below those in the private sector, 11.4 percent versus 12.8 percent, respectively. At 154,558 FTE students, Tennessee's total enrollment is the 17th largest in the nation.

Institutional Finance and Characteristics

Tennessee's public colleges and universities are generally underfunded by national standards. Although attendance at the public sector is 10 percent below average, state funding at 22 percent below average is even lower, creating a level of state funding that, at $2,332 per student, is 13 percent below national rates. Only one category of public institutions receives average levels of state support: the 2-year institutions with academic/comprehensive programs. As was indicated previously, Tennessee is among the poorest states in the United States. Although Tennessee allocates an above average share of tax revenues to higher education, state support is still below national levels in per student support. And below average state support is coupled with low tuition rates. Using total E&G revenues per student (excluding government contracts) as the measure, public institutions in Tennessee receive an average of $3,379 per student, a level 13 percent below U.S. averages.

Within the public sector, no segment achieves the typical revenue pool for comparable institutions, though the general purpose 2-year institutions come close. The University of Tennessee, Knoxville, operates with funds 20 percent below average; Memphis State is funded at 30 percent below average; and the UT Health Science Center, in comparison to national rates, is underfunded by nearly 40 percent. The six comprehensive institutions operate with 15 percent fewer funds per student than other similar schools. Expenditures mirror these below average funding patterns, except in public service where expenditures are 30 percent which is 30 percent above average.

Funding in the major segments of private higher education in Tennessee is generally closer to the respective norms, except in the large baccalaureate sector, where total E&G revenues per student (excluding government contracts) are 17 percent below average. The proportion of revenues coming from tuition is less than average for most private institutions.

Faculty salaries are generally below norms across both the public and private sectors, but the gap is generally greater at the private institutions—13 percent for the sector as a whole, all ranks combined. Tennessee's 24 public institutions are generally larger than average, while the 52 private institutions are typically smaller than similar institutions elsewhere.

Data Notes
1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here.

Postsecondary vocational technical education	$ 1,148,300	(763 FTE Students)
State boards and commissions	$ 2,236,233	
Retirement benefits (including social security)	$ 51,760,758	
Fringe benefits	$	
Interstate contracts and reciprocity payments	$	
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$	
Centrally administered capital/debt service	$	
Other	$	

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$	
Current Funds revenues dedicated to capital purposes:		
—tuition and fees	$	4,137,031
—auxiliary enterprises	$	
—other	$	

Tuition and Fees reappropriated by the state (yes or no) No

Other Comments

All institutional data are gathered from sources other than the THEC and are not audited by the THEC.

TEXAS

Recent Trends

Public higher education in Texas received a major new infusion of state funds, an increase of 88 percent, between 1975 and 1979. During the same period, enrollments also surged ahead with 15.9 percent more students enrolled in the public system than there had been 4 years earlier. The increase in state appropriations was more than sufficient to cover both enrollment growth and inflation. As a consequence, state funding for public higher education in Texas increased by 24.1 percent during the period, even after adjustment for inflation and enrollment gains. Tuition revenues also showed a major improvement of 12.4 percent in real dollar-per-student terms. Reflecting these gains in state support and tuition collections, total E&G revenues increased by 19.2 percent in real dollars per student. Only six other states showed greater improvements in the value of collected revenue for public higher education systems.

These public sector gains, however, were not evenly distributed among the different types of institutions. The greatest gains were experienced at the five public universities (excluding the research university), where inflation-adjusted revenues increased by 32 percent per student. The University of Texas, Austin, had the next largest gain, with real dollar revenues growing by nearly 19 percent per student. The academic/comprehensive 2-year schools were next, with a 16 percent gain in funds, and they were followed by the 20 public comprehensive institutions, where real funds were nearly 10 percent greater by the end of the 4 years. Texas A&M, despite major gains in state support and tuition revenues, held nearly steady in real dollar revenues per student primarily because its significant funding gains were matched by major enrollment increases. The remaining sectors came close to accommodating both inflation and enrollment increases, but showed little real dollar expansion in their revenue base. The one exception was a small public baccalaureate institution, whose revenues fell nearly 15 percent in real dollars per student.

State Financing of Higher Education

Texas provided approximately 5 percent above average funding to support higher education. The $91 per capita for higher education is not surprising given the inherent taxable wealth of the state. It is, however, impressive given the state's low tax levels and the resulting tax revenues, which are 23 percent below average. The state has achieved its above average support for higher education by allocating a larger-than-average share of its budget to this state function.

The majority of higher education dollars support public institutions directly. Of the $91 per capita for higher education, $88 is given to public institutions. The remaining $3 is spread across student aid, private institutional aid, and the state coordinating board.

State Tax Base and Budget

Texas ranked sixth in the nation in levels of taxable economic activity, with a total tax capacity 13 percent above average. The state has above average capacity in 10 of the 11 potential tax categories, the exception being residential property. Texas, however, has very low tax rates. (Only Nevada has a lower rate.) Despite its above average tax capacity, Texas is above average in tax effort in only two categories: severance taxes and licenses. The state has no income tax (neither individual nor corporate), relatively low property tax levels, and low sales tax rates. As a consequence, the state collects 32 percent less in tax revenues than its strong tax capacity would yield at average tax rates. And, because the state begins with a strong tax capacity, actual tax revenues are only 23 percent below average.

The Texas state budget shows above average distributions of this small state pie to all functions except public welfare and the "other" miscellaneous categories. Public welfare receives 8.5 percent of the budget, while a typical state share nationally is 12.4 percent. The "other" category receives 18.8 percent of Texas' budget, whereas in other states this function generally consumes 22.3 percent of the budget. Higher education receives 11.8 percent of the budget in Texas, a share that has remained constant since 1975. This share for higher education is very favorable in comparison to the 9.2 percent national average.

Higher Education Enrollments

Texas residents participate in higher education at average national levels. Thirty-three of every 1000 state residents are enrolled full-time in higher education. These access levels are provided principally through the public sector, with a small proportion of students enrolled in private institutions. Only a very small number of Texans go out of state for higher education. (Since fewer than 1 per 1000 go out of state the number shown in this report is 0.)

The public sector in Texas accommodates 14 percent more FTE students than is typical. Although the state's rate of high school graduates is just below average, the high rate of entrance into the public system by first-time students and nonresidents creates a pool of first-time students 10 percent larger than average. Total attendance levels are further increased by both favorable retention rates and above average numbers of full-time students. In sum, the state's public institutions enroll 33 FTE students per 1,000 residents versus the national rate of 29 per 1000.

The structure of higher education in Texas is fairly similar to the national pattern, though there is a slightly greater emphasis on the university and comprehensive level. As a consequence, the proportion of students enrolled at the graduate level is 22 percent above average. This creates additional funding requirements for Texas when compared to other states. But the larger average size of its institutions in the public sector compensates to some degree.

Institutional Finances and Characteristics

In the public sector in Texas, both state appropriations and enrollments are above average by similar percentages. As a result, state support per student is close to average, though this support varies substantially by category of public institution. State funding is below average by 5 to 15 percent at the universities and by 30 percent at the comprehensive institutions. It is approximately 5 percent above average at the 2-year institutions, and at the public health professional institutions it is 41 percent above average.

Tuition revenues collected by public institutions in Texas are nearly 40 percent lower overall than the average of other states. Every category of public institution follows this pattern, with most collecting between 40 and 60 percent of average tuition levels. Revenues from government grants and contracts are also below average, but to a lesser degree. By contrast, revenues from private gifts and other sources are above average by 36 percent and 104 percent respectively. Revenue patterns, however, vary by sector.

The combined effect of these differing support profiles is a level of E&G revenues per student that approximates the U.S. average. Four sectors are funded at above average rates: Texas A&M, the general baccalaureate, the 2-year academic/comprehensive institutions, and the health professional schools. Three other sectors, the University of Texas-Austin, the five doctoral campuses, and the 2-year occupational schools, are within 10 percent of the average, and only two sectors, the public comprehensives and other specialized campuses, are substantially below average, at 19 and 12 percent respectively.

Expenditures show a major emphasis on research activities in Texas' public system, despite a somewhat-below-average level of government grants and contracts. Support from private sources probably explains this inclination, particularly at Texas A&M.

Despite recent above average increases in faculty salaries, salary levels in Texas are 7 percent below average. Faculty salaries are particularly low in the upper ranks of the five universities (excluding the research universities), the 2-year campuses, and the specialized institutions.

Data Notes

1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state-funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here.

Postsecondary vocational technical education	$
State boards and commissions	$ 13,266,102
Retirement benefits (including social security)	$
Fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$
—auxiliary enterprises	$
—other	$
Tuition and Fees reappropriated by the state (yes or no)

UTAH

Recent Trends

Increases of 79 percent in state and local appropriations to Utah's public higher education between 1975 and 1979 far outstripped both inflation and enrollment growth. These gains gave Utah appropriation increases that rose 66 percent faster than those of the average state. This funding created an overall 36 percent real dollar gain in state support per student for the public sector. And all categories of public higher education institutions shared in this growth, experiencing inflation-proof gains ranging from 26 to 43 percent. As a result, Utah ranked third in the nation—behind Nevada and Wyoming—in the real-dollar financial boost given to higher education by a state.

Tuition revenues, adjusted for both inflation and increased enrollment, also moved ahead, but by much smaller amounts. In real-dollar terms, there was an overall 1.3 percent gain in tuition and fee revenues between 1975 and 1979. Utah's total E&G revenues per student, adjusted for inflation, showed major gains; they grew by 32 percent, a rate of expansion more than five times the national rate. This gain in total funds for higher education largely resulted from the new infusion of state dollars.

State Financing of Higher Education

Utah's allocation of $115 per capita for higher education placed it 7th among the states in expenditures for this function. This rate of support reflects the priority given higher education, to which Utah channels 18 percent of tax revenues, a rate of allocation that is 62 percent better than the national average.

This funding for higher education is split between institutional appropriations, which receive 91 percent, and "other" purposes (i.e., debt service, vocational education support, reciprocity payments, other centrally provided services, and the operations of the state board). All state funding is allocated for public higher education. There is no state-funded student aid program nor are public monies spent on private higher education. At first, this latter finding is somewhat surprising given the higher-than-average proportion of students enrolled in the private sector, 40 percent of the total. However, one single institution, Brigham Young University (BYU), accounts for 87 percent of these students, and this institution, a denominational school, has a policy of not accepting government funding.

State Tax Base and Budget

Utah's tax capacity is 11 percent below average, ranking this state 39th in the nation in inherent capacity to raise public funds. Tax effort in Utah is also below average, by 8 percent. As a result of low wealth and a low tax rate, Utah's tax revenues are 18 percent below average.

Utah's tax capacity is below average in eight of the eleven categories examined here and in all of the major tax sources. The state has above average taxable resources in severance tax-related activity, licenses, and farm property, all of which are relatively minor tax categories. The state's tax structure primarily emphasizes general sales taxes and individual income taxes and is relatively low in its rates for residential property taxation and all forms of corporate taxation.

A review of Utah's total expenditure budget reinforces the previously described emphasis on higher education. In 1979, higher education received 15.5 percent of all state-expended funds, a share nearly 80 percent larger than is typically channeled to this purpose by other states. Elementary/secondary education and highways are also major priorities for state spending in Utah, and both receive larger-than-average shares of the budget. All other functions (i.e., public welfare, health and hospitals, and public services) receive smaller-than-usual shares.

Higher Education Enrollments

Residents in Utah are 6 percent more likely than average U.S. residents to participate in higher education. They are also more likely to attend school in Utah, and only half the average number of residents migrate to other states for higher education. In-state attendance by residents at both the public and private sectors is above average. At the same time, large numbers of students from other states move to Utah to obtain their college education. The public sector enrolls almost two and a half times the usual number of nonresidents while the independent sector attracts four and a half times the usual number. Clearly, the state's system is attractive to both residents and nonresidents. The effect of this dual attraction is a public sector 20 percent larger than is generally true for a state this size and a private sector two and a half times larger.

Both sectors concentrate heavily on university level studies, with 60 percent of public sector students and 87 percent of private students enrolled at universities. This distribution of students is a more expensive system of higher education to support. The public sector in Utah is, in fact, substantially more graduate level than the average, thus reinforcing the need for greater resources.

Institutional Finances and Characteristics

With recent increases in state support for higher education, Utah's level of per student support is now 13 percent above average. This level of support is achieved because state support per capita is 35 percent above average and is more than sufficient to cover the 20 percent larger-than-average pool of students enrolled in the system. However, the distribution of these funds is somewhat uneven. For example, the University of Utah receives 18 percent less funds per student than similar schools elsewhere. The two 2-year occupational colleges also receive below average state funding, 10 percent less per student. All other sectors receive above average state funding. Support from other sources varies by sector, and generally the funding profile established by state funding is mirrored in total funding. As a consequence, two sectors, the University of Utah and the occupational schools, respectively operate with 14 and 10 percent less-than-average funding. All other sectors are funded above average, ranging from 51 percent above for the public 2-year schools, to 13 percent above for the public baccalaureate colleges, and to 5 percent above for Utah State.

Information for the independent sector is shown but not discussed because the figures on BYU are estimated by the National Center for Education Statistics and not actually reported by the school.

Faculty salaries in Utah have improved substantially between 1975 and 1979, increasing quite a bit faster than faculty salaries elsewhere. Still, despite these major gains, faculty salaries are just now at the average in the public sector, with variations above and below in the different categories of institutions.

Data Notes

1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state-funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here

Postsecondary vocational technical education	$ 11,406,400	(6,080 FTE Students)
State boards and commissions	$ 688,100	
Retirement benefits (including social security)	$	
Fringe benefits	$	
Interstate contracts and reciprocity payments	$ 770,400	
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$ 250,200	
Centrally administered capital/debt service	$ 5,639,000*	
Other	$	

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data

Debt service that is part of state and local appropriations to public institutions in the state	$ 245,888
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$ 2,238,106
—auxiliary enterprises	$ 1,820,699
—other	$
Tuition and Fees reappropriated by the state (yes or no)	**

Other Comments

* State appropriations to State Building Boards for Higher Education Capital Facilities

** Tuition and fees are held as "dedicated credits" by each institution. Collections for a lesser amount than forecast may result in a request for a supplemental appropriation.

Source: Utah System of Higher Education

VERMONT

Recent Trends

The rate of increase in both state appropriations and numbers of students to support with these funds has been comparatively low in Vermont since 1975. State appropriations for public higher education institutions totaled $22.5 million in 1979, a 32 percent gain since 1975. However, state appropriations increased by 47.7 percent in other states during this same period. Public sector enrollments were also growing slowly in Vermont, gaining 3.3 percent compared to a national average increase of 6.0 percent.

These small increases in state appropriations were outweighed by inflation, thus reducing the real-dollar value of state funds per student by 2.3 percent. (Only nine states gained less in funds for higher education between 1975 and 1979.) Bucking this general pattern, one sector in Vermont experienced major improvements in state funding, the Community College of Vermont, where per student funding leapt forward by 177 percent in real dollars.

Tuition revenues collected by public institutions in Vermont made substantial gains against inflation, growing 9.6 percent. These increases in tuition more than counterbalanced the losses in state funding and were largely responsible for netting a real dollar gain in total funding. On average, public institutions in Vermont expanded their real-dollar-per-student funding base by 5.7 percent.

State Financing of Higher Education

State support for higher education in Vermont equaled $63 per person in 1979, a level 27 percent below average. This low level of state support is largely the result of higher education's below average share of the state's budget.

Vermont's distribution of these funds within higher education also differs from the typical state pattern. Only 74 percent of these funds go directly into public institutional support, compared to 91 percent in other states. The remaining funds are split between student aid in both the public and private sectors, and funding for other purposes such as the state commission, vocational-technical education, debt service, and interstate contracts and reciprocity agreements.

State Tax Base and Budget

Vermont, 9 percent poorer than average in potential tax capacity, makes an above average tax effort, and as a result collects tax revenues that are only 4 percent below average. Vermont's tax capacity is above average in sales tax categories, licenses, and residential property only. However, low levels of personal income and extremely low capacity in both corporate income and corporate property reduce the state's inherent tax wealth. Surprisingly, the state's tax structure relies heavily on these areas of low capacity. Vermont ranks 3rd in the nation in its tax rates for corporate income, 10th in individual income tax rates, and 13th in both residential and corporate property tax rates. The combined effect of taxes in these and other categories produces a level that is within 4 percent of average.

Census figures on the allocation of Vermont's state budget conflict with figures from other data sources. The 1979 Census figures indicate an above average and increasing state emphasis on higher education, with 13 percent of the budget going to this function. Highways also are depicted as a priority state function, at the expense of health and hospitals and public services.

Higher Education Enrollment

Vermont residents are almost 20 percent less likely to attend college than the average U.S. citizen. Despite above average migration to other states for higher education and an average enrollment in the state's private sector, the resident enrollment at public institutions in Vermont is 32 percent below average national rates.

Although access for state residents is below average, nonresidents find Vermont an attractive place to matriculate. In fact, Vermont's public and private institutions enroll four and a half times the average number of nonresidents. The result of this large nonresident enrollment in the public sector is that Vermont enrolls the usual number of students for a state its size. The private sector is more than double the usual size.

Vermont's public sector is predominantly university in character, with 64 percent of public students enrolled at the University of Vermont. A more typical pattern is a system with only 31 percent of students at universities. Despite the unusual focus on university study, this institution is 40 percent smaller than average in size and nearly 50 percent less graduate in emphasis. The independent sector is, by contrast, more comprehensive and baccalaureate than is generally the case and includes no universities.

Institutional Finances and Characteristics

With enrollments at public institutions near average and state appropriations at levels substantially below average, state support per student in Vermont falls 40 percent below the national average. However, Vermont institutions augment these low state funds with above average revenues from nonstate sources. As a result, overall revenue levels are 24 percent greater than average.

This positive funding profile varies by sector. The University of Vermont and Vermont Technical College operate with funds that are 10 and 33 percent above average, respectively. The three general baccalaureate institutions and the Community College of Vermont, by contrast, operate with funds that are approximately 15 percent below average. Thus, despite recent gains in state funding, the Community College of Vermont still is funded at below average rates.

The most unusual feature in the financing profile of Vermont's public institutions is the extremely small role of state funds, a role that continues to shrink. Vermont's public institutions obtain only 27 percent of their funds from state sources, compared to a more typical share of 60 percent in other states. And even this 1979 share is down from a 1975 share of 29 percent. By contrast, Vermont schools collect tuition revenues that are three times larger than is typical. Partly because of the large number of nonresidents, Vermont collected $2112 per student in 1979 while public systems elsewhere were collecting $701 per student. Since 1975, the role of tuition as a source of operating funds has increased from 33 to 35 percent. In other states, tuition contributes only 15 percent of operating revenues.

Funding at independent institutions in Vermont varies substantially by type of institution. The six baccalaureate institutions, the occupational 2-year school, and the four specialized institutions are funded at or above the average. The independent comprehensive institutions and the general 2-year schools operate with funds that are 11 and 23 percent below average, respectively.

Despite a generally positive revenue base at public institutions in the state, faculty salaries in Vermont are 14 percent below average and have increased more slowly since 1975 than in other states.

Data Notes

1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state-funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here.

Postsecondary vocational technical education	$ 249,700	(174 FTE Students)
State boards and commissions	$ 3,526,005	
Retirement benefits (including social security)	$	
Fringe benefits	$	
Interstate contracts and reciprocity payments	$ 100,500	
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$ 231,534
—auxiliary enterprises	$ 2,296,726*
—other	$
Tuition and Fees reappropriated by the state (yes or no)	No

Other Comments

* $1,064,000 at the University of Vermont for debt service on dormitories, dining halls, etc. $1,232,726 for Vermont State Colleges for similar purposes.

The University of Vermont has been reporting revenues paid by other states under contract with its Medical College as part of "state appropriations", causing distortions in the reporting of Vermont support levels.

Source: Vermont Higher Education-Planning Commission

VIRGINIA

Recent Trends

Virginia provided a major boost in its support to public higher education with an 89 percent increase in state and local appropriations between 1975 and 1979. Only two other states, Alabama and North Dakota, exceeded this gain. This increase was nearly twice the national rate and covered both inflation and an 18.2 percent increase in enrollments. As a consequence, state funding grew in real dollar terms per student by 22.4 percent, more than 3 times the national rate. All sectors shared in this growth, led by Virginia Commonwealth University and the University of Virginia, which made net gains of 64 and 56 percent, respectively.

Except for the University of Virginia, revenues from tuition did not keep up with inflation and enrollment changes. Overall in the public sector, net tuition revenues per student fell 5.6 percent. Still, the net gain in total E&G revenues per student was a healthy 14.1 percent, more than twice the norm, thus ranking Virginia 15th nationally in this category. The University of Virginia and Virginia Commonwealth University made major real dollar gains in revenues, 51.5 and 50.8 percent, respectively. All sectors shared in these improvements, but by lesser amounts of from 2 to 7 percent. The private sector also did well overall, with a 4.3 percent increase in total revenues per student, a rate far better than the national one.

Enrollment during the period increased by 18.2 percent in the public sector, a rate three times the norm and fifth largest among the states. The private sector in Virginia grew by 13.6 percent, a rate 16 percent better than the norm.

The proportion of state and local expenditures going to higher education increased during the period, causing Virginia's ranking for per capita expenditures for public higher education to move from 34th to 24th nationally.

State Financing of Higher Education

Virginia spends $82 per capita for higher education, a level 5 percent below the national average. Ninety-seven percent of this allotment goes for direct institutional support; 2 percent goes to student aid (primarily to students attending private institutions); and 1 percent goes to other forms of assistance. The majority of state monies, 97 percent, go to support public institutions and students in Virginia.

State Tax Base and Budget

Virginia's overall tax capacity ranks 38th in the nation. Only in individual income and residential property taxes are Virginia tax capacities above national rates. Virginia's tax effort is also below average, ranking 32nd overall. The net result is $626 in state revenues per capita, a level 20 percent below national rates. The major sources of revenues are residential property (21 percent), general sales (21 percent), individual income (19 percent), and selective sales taxes (14 percent).

Elementary/secondary education and highways receive the largest portions of Virginia's budget, 27 and 13 percent respectively, while higher education is third at 11 percent. The allocation for higher education is above average, and this explains why Virginia's per capita expenditures for higher education are about average, even though both tax capacity and tax effort are below national levels.

Higher Education Enrollments

Virginia residents participate in higher education at rates 9 percent below average. Residents attend the state's public institutions and out-of-state schools at typical rates, but lag in their attendance at in-state private schools.

Because Virginia's public institutions serve large numbers of nonresidents, and have high retention rates in general, the size of the public sector is somewhat above national levels, with an enrollment of 30 students per 1,000 capita.

The distribution of enrollments in Virginia closely mirrors the national pattern, with universities accommodating 31 percent of students, comprehensives 26 percent, baccalaureates 10 percent, and 2-year institutions 34 percent. Virginia, however, places a greater-than-usual emphasis on graduate study, enrolling 9 percent more graduate students than average. The split between enrollments in the public and private sectors is 84 percent and 16 percent, respectively, indicating a greater-than-usual emphasis on public education. Further contributing to this pattern is the fact that in recent years public enrollments have been increasing at a faster rate than have private enrollments. Virginia's total FTE enrollment is 185,652, the 13th largest nationally.

Institutional Finances and Characteristics

In general, Virginia's public institutions are funded at national levels. The universities appear to do somewhat better, when compared with similar institutions elsewhere, than do comprehensive, baccalaureate, or 2-year institutions. These latter categories are funded at rates 10 to 15 percent below average. State support in the form of appropriations is at average levels across the public sector, while revenues from tuition and private gifts and grants are above average, thus improving the relative economic position of Virginia's institutions. Instructional expenditures per student are close to or better than national norms across all types of institutions. Academic support expenditures per student are 21 percent above the norm for the public sector as a whole, and 71 percent above at Virginia Commonwealth University. Expenditures per 1,000 capita for public service at Virginia Polytechnic Institute are almost five times the national rate.

In the private sector, overall revenues per student are 9 percent less than average, but there is substantial variation in funding among different classes of private institutions. For the baccalaureate colleges, which comprise both more than half of the 32 private institutions in Virginia, and more than half of the students in the private sector, revenues per student are 12 percent higher than usual. In particular, revenues from private gifts, grants, and endowments are important in fueling these support levels.

Despite recent funding gains overall, faculty salaries in the public sector are generally 8 percent below average, with substantial variations in the different institutional sectors. For instance, salaries at the University of Virginia are 6 percent above average despite Virginia's relatively low rates of increase recently. (Between 1975 and 1979, the increase was almost 30 percent below typical national rates.) Salaries in all other sectors are below national norms, particularly at the 2-year institutions. This, despite the fact that, between 1975 and 1979, salaries at the 2-year schools increased by 40 percent, a rate almost 50 percent greater than that experienced by 2-year schools in other states.

The average enrollment in the 39 public institutions in Virginia is close to or just below national levels. The exception is the University of Virginia, a school enrolling approximately 15,000 students, 35 percent fewer students than is usual for such schools. Although relatively small, the University of Virginia enrolls a large proportion of graduate students, 30 percent of total enrollment. Thus the University of Virginia ranks first in the nation, among research universities with medical programs, in emphasizing graduate studies, thereby creating additional funding needs at this campus.

Data Notes

1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state-funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here.

Postsecondary vocational technical education	$
State boards and commissions	$ 5,689,345
Retirement benefits (including social security)	$
Fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$ not available
Other	$

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$ not available
—auxiliary enterprises	$ 99,978,542
—other	$

Tuition and Fees reappropriated by the state (yes or no) Yes

WASHINGTON

Recent Trends

Between 1975 and 1979, appropriations for public higher education increased 51 percent in Washington, a rate of improvement somewhat better than the national average. There were major gains (12 percent) in the number of students to support with these funds, representing growth in enrollment that was twice the national average. The increases in state funds, though, were still sufficient to cover both these enrollments and inflation, as well as provide a 3.1 percent real dollar gain in state support.

Tuition increases between 1975 and 1979 were even greater, creating a 27.4 percent net improvement in tuition revenues, even after adjustments for inflation and enrollment changes. With both appropriations and tuition revenues showing real gains, total revenues in Washington improved by 5.1 percent over the four-year period. These gains pervaded all sectors of higher education in Washington. Evergreen State College experienced the greatest improvement in funding, with constant dollar per student gains of 35 percent. Funding at the two universities increased 12 percent, with gains at the other sectors in the 5 to 7 percent range.

The share represented by state appropriations in public institution budgets remained stable over the period, at 57 percent. Tuition in Washington, however, now carries a larger share of the budget at these institutions growing from a 9 percent portion in 1975 to 11 percent in 1979.

State Financing of Higher Education

Tax contributions per capita for higher education in Washington were 36 percent greater-than-average in 1979. Although the level of tax revenues collected in the state were just below typical U.S. levels, Washington lawmakers allocate a far greater-than-average share of the state's budget to higher education. Washington spent $118 per capita for higher education in 1979 compared to the U.S. average rate of $87 per capita.

Of the $118 spent on higher education, the state channels $110 to the public institutions in the form of appropriations, spends $7 on "other" functions, primarily vocational education, and the remaining funds are spent on state student aid for students at both public and private institutions. The state allocates an above-average share of these higher education funds to institutions and less funds are provided for student aid than is typical.

State Tax Base and Budget

Washington has an average capacity to raise taxes and comes close to that average with its tax structure. Tax revenues collected are just below the U.S. average (index 97). Washington's tax capacity is strongest in individual income, residential property and general sales. Its tax structure is heavily weighted towards sales tax categories, both general sales where it has the highest rate in the U.S. and in selective sales where it is fourth highest. By contrast, the state had no income taxes in 1977, neither personal nor corporate. Property taxes in the state were also lower than average. Tax rates related to death and gift transfers (Washington ranks 5th) and severance (Washington is highest among the states) were substantial.

Although revenues from these tax sources are 3 percent below average, when total state resources are combined (including Federal revenue sharing funds), the state's total budget is 11 percent larger than average. Higher education receives a large share of that budget, 12 percent, a share one-third larger than the average state. Highways, public services, and elementary/secondary education are also favored state activities, at the expense of public welfare and health and hospitals. Although higher education receives an above-average share of a larger-than-average state pie, its share of the state budget has declined since 1975, when it received 13 percent of these funds (in contrast to 12 percent in 1979).

Higher Education Enrollments

Washington's financial commitment to higher education has provided a level of access to public higher education afforded by very few other states. Residents of Washington are almost 20 percent more likely to participate in higher education than the average state. Thirty-nine FTE students for every 1000 individuals in the state are enrolled in a college or university compared to the 33 per 1000 averaged nationally. Only California (43 per 1000) provides more access for residents than Washington. Massachusetts and Arizona match the participation rates achieved by Washington residents. In Washington, access to higher education is directly tied to public sector enrollments. One-third fewer Washington residents attend private schools in the state and only half the usual number go to other states seeking higher education. As a consequence, the cost of this impressive level of access resides with the state in Washington. Enrollments in the public sector involve 42.4 FTE per 1,000, a level 47 percent higher than average. More than half these students (55 percent) attend one of the 27 community colleges in the state, a very large share of students in comparison to other states. The comprehensive and baccalaureate sectors are smaller than usual, while university-level enrollments represent a similar proportion to that in other states. Washington's student population is less graduate as a whole, because of this emphasis on the two sectors. The public system therefore does not represent unusual cost requirements in terms of its overall structure.

Institutional Finances and Characteristics

Although Washington's appropriations per capita for public higher education are 41 percent above the average, the state spreads these funds over an even larger pool of students (47 percent larger than usual). As a result, state dollars per student in Washington are 4 percent below average. The distribution of these funds by category of institutions varies considerably. The universities are funded at levels close to average but the other large sector, the 2-year campuses receive funds which are 6 to 13 percent below those of similar institutions in other states. In a markedly contrasting pattern, the two small sectors, the comprehensive and general baccalaureate institutions, are given appropriations substantially above average (indexed at 116 and 216, respectively). Because tuitions are quite low in the state (28 percent below average), the profile of total revenues per student is generally even lower than that for state funds. The universities, for example, find their state funds index of 98 falling to an index of 90 (ten percent below average) in terms of total funding (excluding government grants and contracts). Similar declines are evident in most of the other sectors. As a result, only Evergreen State College operates with funds substantially above the average (index 185). The comprehensives (Central, Eastern, and Western Washington) have funding that is 3 percent above average, while the community colleges are 12 to 15 percent below average in the revenues they receive.

Faculty salaries showed measurable improvement between 1975 and 1979, bringing their comparative position close to or above national averages at all public sectors in the state. However, there are clear variations from this pattern when salaries by rank are reviewed. Salaries for full professors are below average in all cases, while those for the lower ranks are close to or above average.

Data Notes

1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state-funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here.

Postsecondary vocational technical education	$21,964,527	(9,535 FTE Students)
State boards and commissions	$ 1,948,278	
Retirement benefits (including social security)	$	
Fringe benefits	$	
Interstate contracts and reciprocity payments	$ 184,600	
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$	
Centrally administered capital/debt service	$	
Other	$	

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$19,156,393*
—auxiliary enterprises	$
—other	$
Tuition and Fees reappropriated by the state (yes or no)	No

Other Comments

* These amounts were not included in current revenues and expenses.

WEST VIRGINIA

Recent Trends

State and local appropriations to public higher education in West Virginia went up 61 percent between 1975 and 1979. After adjustment for inflation and the 4.8 percent growth in enrollments during this period, appropriations showed a net gain of 17.6 percent per student, a rate almost three times the national average. This impressive growth in appropriations, coupled with a 33.6 percent rise in revenue from tuition and fees, resulted in a 29.2 percent increase in the real dollar revenues per student. This gain in funds for West Virginia's public higher education was nearly five times the national rate, and by far the largest for any state in the eastern half of the nation. Only three other states showed greater improvements in funding public higher education systems during this period, Nevada, Wyoming, and Utah.

The gain was highly concentrated, however, in university, 2-year, and health professional institutions. Revenues per student declined substantially for other types of public institutions. In particular, the loss of 5.7 percent in real dollar revenues per student in the general baccalaureate sector is significant, given that the eight public institutions in this sector enroll nearly 35 percent of all public students in the state.

In the private sector, revenues per student increased by 8.7 percent in real dollars, well above national rates. At the same time, enrollments fell slightly, 1.1 percent.

This period from 1975 to 1979 therefore should be seen as a time of major improvement for both public and private higher education in West Virginia. Gains in funding from the state and from tuition fueled this improvement. The new commitment of state funds moved West Virginia from a position of 40th to 25th nationally in per capita expenditures for public higher education. Higher education's 1975 share of 8 percent of the state's budget jumped to 10 percent in 1979.

State Financing of Higher Education

West Virginia spends $82 per capita for higher education, a level 5 percent below the national average. About 81 percent of the support goes directly to institutions, 2 percent is spent on student aid, and 17 percent is used for other forms of support (principally for a separate state fund for retirement and other fringe benefits). The public sector receives 98 percent of the state's funding for higher education. Students in private institutions in the state receive a small amount of state funded student aid.

State Tax Base and Budget

West Virginia ranks 36th in overall tax capacity and 44th in overall tax effort. As a result, tax revenues of $567 per capita are 27 percent below the national average. About 40 percent of that revenue is raised through general sales taxes. West Virginia ranks second nationally in its tax effort in this category, a surprising finding given that the state ranks 49th in capacity for this category of taxes. In all other tax categories (except for taxes on gifts and death transfers), West Virginia underutilizes its capacity. West Virginia's tax capacity with respect to public utilities and severance is among the highest in the nation, but the corresponding tax effort is relatively low. Major sources of state revenue include a selective sales tax and individual income taxes.

The major priorities in the state's budget are elementary/secondary education, which receives 28 percent of budget, highways, which receive 19 percent of budget, and higher education, which receives 10 percent. West Virginia spends an unusually large share on highways, more than double the national rate. As a result, public services, public welfare, and health and hospitals receive shares far below the national average, between 20 and 30 percent below.

Higher Education Enrollments

West Virginia residents participate in higher education at rates 30 percent below the national average; indeed, West Virginia and the District of Columbia share the lowest rate in the nation. Public institutions in West Virginia enroll 20 percent fewer residents than the norm. Residents not only attend the state's public institutions at below average rates, they are also less likely to go to private institutions in the state or to institutions in other states. The combined effect of these choices is that 23 residents per 1,000 attend higher education versus a national average of 33 per 1,000.

Students from other states find West Virginia an attractive choice for higher education and migrate to this state at rates two-and-one-half times the norm. This in-migration, combined with high retention rates, brings the resulting enrollment level in the public sector surprisingly close to the national average (only 6 percent below). (State residents are the traditional source of enrollments for such institutions.) Enrollment in West Virginia's public institutions is 27 per 1,000 population; the national level is 29 per 1,000.

Within the public sector, which represents 85 percent of the students, enrollment is concentrated in the state's university (West Virginia University) at 36 percent and at baccalaureate institutions at 35 percent. By contrast, only 5 percent of the public enrollment nationally is in baccalaureate institutions. Students in the private sector in West Virginia are even more heavily concentrated in baccalaureate institutions, 84 percent. The proportion of graduate students in the public sector is 13 percent, the fifth highest in the nation. Between 1975 and 1979, overall enrollments in the public sector grew 4.8 percent, a rate somewhat below the national pattern. The growth rate was considerably higher in comprehensive, 2-year occupational, health and other professional schools. West Virginia's public institutions enroll 50,195 FTE students overall.

Institutional Finances and Characteristics

Per student revenues at West Virginia's public institutions are below national rates. Only West Virginia University and the state's 2-year academic and comprehensive institutions operate with funds near national rates. And even these schools are funded at levels below average for similar schools, 2 and 7 percent, respectively. When compared with similar institutions, comprehensive and baccalaureate institutions in West Virginia are not well funded and operate with almost 25 percent fewer funds than is typical. Tuition revenues in particular are quite low, 41 percent below the national average for the public sector as a whole, despite a growth in real dollar tuition revenues between 1975 and 1979 that was the second highest in the nation. The state's tuition revenues are substantially below average in all categories of public institutions. These low tuition revenues are particularly surprising given West Virginia's large number of students from other states.

Expenditures for instruction per student are somewhat below average while public service expenditures per capita are above the norm. Research expenditures per faculty at the state university are the second highest in the nation for comparable institutions.

Faculty salaries in the public and private sectors are still below average by significant amounts, despite recent improvements in salary levels.

Data Notes

1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded except state-funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here.

Postsecondary vocational technical education	$	
State boards and commissions	$	740,000
Retirement benefits (including social security)	$	12,500,000
Fringe benefits (Included above under retirement benefits)	$	
Interstate contracts and reciprocity payments	$	646,100
Service functions provided centrally **(e.g. computer service, library, telephone, etc.)**	$	
Centrally administered capital/debt service	$	
Other	$	

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$
—auxiliary enterprises	$
—other	$
Tuition and Fees reappropriated by the state (yes or no)	(See note below)

Other Comments

In fiscal year 1978-79, due to legal action, approximately $6.5 million in student fees were transferred to the state's general tax fund and reappropriated to the institutions. This resulted in abnormally large increases in state funding over fiscal year 1977-78 and corresponding large decreases in student fee revenues at some institutions. These fees are included with tuition as a revenue source in this study.

Source: West Virginia Board of Regents

WISCONSIN

Recent Trends

Increases in state and local appropriations to public institutions in Wisconsin have barely kept pace with inflation and enrollment changes. Between 1975 and 1979, appropriations increased by 38.1 percent, but, because of inflation and a 4.8 percent growth in public enrollment, the net increase for the period amounted to only .8 percent in appropriations per student. The comprehensive institutions did not share in these gains and instead saw the per student value of their state monies erode by 8.8 percent. The public baccalaureate schools sustained losses of 1.6 percent, and the Madison campus of the University of Wisconsin experienced a .4 percent loss. The 2-year occupational schools fared far better, as their constant dollar per student appropriations increased by 11.7 percent. The Milwaukee campus of the University experienced gains of 9.7 percent, largely because of a 7.2 percent drop in FTE enrollment.

Between 1975 and 1979, tuition and fee increases outpaced inflation in every sector in general by 10.4 percent, thus providing an important base of funding to combat inflation. Generally (except for the public baccalaureate institutions), tuition revenues in the public sector increased as a proportion of instructional expenditures.

The net effect of changes in state funds, tuition, and educational and general functions (excluding government grants and contracts) was a real dollar gain in public sector revenues of 1.6 percent. However, this gain was unevenly distributed among institutional sectors in Wisconsin. The 2-year occupational sector gained the most, with a 14.1 percent increase; the Milwaukee campus of the University followed with a 10.4 percent increase; and the other 2-year institutions showed a 4.4 percent increase. The nine campuses of the University that are classified as comprehensive institutions had the most slippage in funding, with support trailing inflation and enrollment adjustments by 6.7 percent. Losses near 1 percent in total funding occurred at the Madison campus and at the two general baccalaureate campuses of the University System.

In the private sector, total educational and general revenues per student increased by an impressive 18.6 percent in constant dollars. However, this general improvement notwithstanding, the private comprehensive institutions experienced a 30.1 percent decrease and the private 2-year schools an 8.8 percent loss.

Overall, according to Census figures, the portion of the state budget spent on higher education decreased from 14 percent in 1975 to 12 percent in 1979. Despite this slippage, Wisconsin still allocated a large share of its budget to higher education, and its per capita expenditures for public higher education rank ninth in the nation.

State Financing of Higher Education

Wisconsin spends $115 per capita for higher education, an amount 32 percent greater than the national average. Ninety-five percent of this expenditure goes toward direct support of institutions, with student aid receiving 4 percent. Public institutions receive 97 percent of the state's expenditures for higher education. Of the share going to private higher education, two-thirds is allocated to student aid and one-third is for institutional support.

State Tax Base and Budgets

Wisconsin raised $862 per capita in state taxes, 10 percent more than the typical state. Although Wisconsin's inherent tax wealth is 4 percent below average, the state has a high tax rate (ranking fifth nationally), and this tax effort accounts for the state's large pool of tax revenues. Wisconsin's tax effort ranks in the top ten nationally for individual income, corporate net income, farm property, and death and gift taxes. The largest portions of Wisconsin's tax capacity are found in general sales, at 21.7 percent, residential property, at 21.7 percent, and individual income taxes, at 16.2 percent.

Elementary/secondary education receives the largest portion of the state budget, 27 percent, followed by public welfare, at 15 percent. Public services and highways each receive 10 percent of the budget. Although the portion going to higher education has declined to 12 percent in recent years, that allotment is still 33 percent greater than budget shares typically allocated by states for this purpose.

Higher Education Enrollments

Wisconsin residents are generally more likely to attend higher education than are residents of other states. This higher access is directly attributable to their enrollment in the state's own public institutions, which accommodate 30 residents per 1,000 capita, a number 20 percent above average. As a consequence of this emphasis on enrollment in the state's public institutions, Wisconsin residents seeking a college education are less likely to enroll in private schools within the state or to go to out-of-state institutions.

Although Wisconsin residents do not generally migrate to other states for higher education, a substantial number of students from other states, 40 percent more than is typical, do come to Wisconsin. The high resident enrollment, combined with large numbers of nonresidents, results in a heavily enrolled public sector—a system with 20 percent more students than usual. This large number of students creates a significant funding load for the state.

Although there are 32 private institutions compared to 30 public institutions, 85 percent of the total enrollment is in the public sector. Public enrollments are concentrated in universities with 33 percent of the students, comprehensive institutions with 36 percent, and 2-year institutions with 27 percent. This pattern is fairly typical, except for the concentration in comprehensive institutions, which is well above average. The Madison campus enrolls a larger-than-average number of graduate students, even when compared to similar institutions—27 percent versus the average 21 percent—thus creating additional support needs for the campus.

Private enrollments are concentrated in baccalaureate institutions with 46 percent of the students, and in one university, Marquette, with 35 percent. Public enrollments rose 4.8 percent from 1975 to 1979, compared to an 8.1 percent rise in the private sector. With 187,603 FTE students, Wisconsin's total enrollment in higher education is the 12th largest in the nation.

Institutional Finances and Characteristics

Using total E&G revenues (excluding government contracts) as the measure, public institutions in Wisconsin are funded collectively at per student rates 14 percent above national levels. This is largely the result of above average state funding and tuition revenues. Universities and comprehensive institutions, however, which enroll 68 percent of the students in the public sector, are funded at average or slightly below average levels. The funding base for the research university is substantially improved by an unusually high rate of government grants and contracts per faculty member. Still, it is unclear whether the greater graduate emphasis at this institution is adequately supported. The public baccalaureate and 2-year schools, when compared to other public institutions in the state, operate with funds that are 40 to 60 percent above those of similar institutions elsewhere, primarily because of generous state funding. Total revenues for institutions in the private sector are also above average, though there are major variations in funding among different types of institutions.

Faculty salaries in Wisconsin are at national levels in the public sector but slightly below average in the private sector. Although Wisconsin's recent increases in faculty salaries have been close to national rates, differences by rank are evident; in comparison with similar faculty elsewhere, faculty in the lower ranks fare better than do full professors. The average size of public institutions in Wisconsin is 20 to 50 percent larger than usual, except for the nine comprehensive institutions, which are slightly smaller.

Data Notes

1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded except state-funded student aid which was reported on the **State Financing of Higher Education** page for this state Only funds not reported by the institutions in the state are shown here

Postsecondary vocational technical education	$	
State boards and commissions	$	1,114,769
Retirement benefits (including social security)	$	
Fringe benefits	$	
Interstate contracts and reciprocity payments	$	
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$	
Centrally administered capital/debt service	$	
Other	$	

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data

Debt service that is part of state and local appropriations to public institutions in the state	$	39,261,549
Current Funds revenues dedicated to capital purposes:		
—tuition and fees	$	
—auxiliary enterprises	$	12,564,100
—other	$	808,579*
Tuition and Fees reappropriated by the state (yes or no)	No	

Other Comments

The University of Wisconsin Extension is a statewide function that is reported as a separate institution.

Wisconsin does have a tuition reciprocity agreement with Minnesota. However, the net is from Minnesota to Wisconsin and includes tax reciprocity.

*These funds are for hospital debt service. Additional debt service of $947,706 is provided for academic facilities from restricted federal grants and restricted private gifts.

Source: University of Wisconsin System

WYOMING

Recent Trends

Wyoming led the nation in 1979 in per capita expenditures for higher education. Although enrollment increased only 2.4 percent between 1975 and 1979, total state and local appropriations increased 83.4 percent. Measured in constant dollars, state and local appropriations per student went up 36.9 percent, more than 5 times faster than the national average. Tuition and fees per student, however, fell 7.7 percent in constant dollars during the same period. The net result was a constant dollar improvement of 32.3 percent in total E&G revenues per student. Public higher education in Wyoming therefore had the benefit of the second largest increase in purchasing power in the nation (only Nevada did better). This improvement in higher education support from the state was the result of an overall increase in the size of the state budget. Higher education's share of state expenditures remained constant over the period, though still at a level somewhat above the national average.

State Financing of Higher Education

Wyoming spends $182 per capita for higher education. As indicated, this is the highest in the nation and more than twice the average. Since there are no independent institutions in Wyoming, all the funds are expended in the public sector, with about 73 percent going toward direct institutional support. Student aid accounts for less than 1 percent of state funding, while other forms of assistance to higher education account for 27 percent, an unusually large portion. These latter funds support the following: $13 million for a series of central services, $2 million for fringe benefits, and over $4 million for other needs.

State Tax Base and Budget

Wyoming has the highest overall tax capacity per capita in the nation, $1210, and also enjoys the highest ranking in several individual tax categories including licenses, corporate net income, public utilities property, and severance taxes. In tax effort, however, Wyoming ranks 39th among the states. The high capacity and low effort combine to produce state tax revenues of $979 per capita, a level that is still 25 percent above the national average. The largest sources of state revenue are general sales taxes, commercial and industrial property taxes, residential property taxes, and severance tax revenues.

Higher education receives 11 percent of Wyoming's direct general expenditures, a level 22 percent above the norm. Elementary/secondary education receives 28 percent, the largest share of the state's budget, but a decline from 1975, when it received a 32 percent share. During the same period, higher education's 11 percent share remained constant.

Higher Education Enrollments

Residents attend Wyoming's higher education institutions at lower than national rates, but high in-migration results in an overall attendance rate of 34.8 students per 1,000 population, a level 20 percent above average. First-time resident enrollment is high, but retention rates are well below the norm. Wyoming has only two types of institutions, one public university (nonmedical) and seven public 2-year institutions, which enroll 57 and 43 percent of the students, respectively. From 1975 to 1979, the university's enrollment dropped by 7 percent while enrollment at the 2-year institutions increased by 19 percent. Wyoming's total higher education enrollment of 14,110 FTE students is extremely low, a fact that explains why their institutions are far smaller in size than is typical. The 2-year institutions had a mean enrollment of 869 students, about one-third the norm, and the university is about half the average size. Wyoming also has proportionately fewer graduate students, even though research expenditures per faculty are well above national rates.

Institutional Finance and Characteristics

Institutions in Wyoming are well funded by national standards. E&G revenues per student (excluding government contracts) are 65 percent above national rates in the university sector and 70 percent above in the 2-year sector. These funding profiles are primarily due to above average state support. Private gifts, grants, and funds from other sources help as well. Tuition revenues, by contrast, are 10 to 15 percent below average.

Expenditures in most categories exceed national rates. Especially notable are instruction expenditures; at the university, they are $2757 per student, a rate 30 percent above average, and at the 2-year institution, that are $1892 per student, a rate 56 percent above average.

Between 1975 and 1979, faculty salaries rose about 40 percent faster than at comparable institutions, placing Wyoming fourth in the nation in rates of increase in faculty salaries. Despite these recent gains, salaries at the 2-year institutions are still about 16 percent below the norm, while at th university salaries are 2 percent above national rates.

Data Notes

1978-79

Additional State and Local Government Funding for Higher Education

Funds **not** flowing through institutional accounts and hence not recorded, except state-funded student aid which was reported on the **State Financing of Higher Education** page for this state. Only funds not reported by the institutions in the state are shown here.

Postsecondary vocational technical education	$
State boards and commissions	$ 266,363
Retirement benefits (including social security)	$
Fringe benefits	$ 2,016,258
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$13,090,945
Centrally administered capital/debt service	$not available
Other Other current expense	$ 4,261,744

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$
Current Funds revenues dedicated to capital purposes:	
—tuition and fees	$not available
—auxiliary enterprises	$not available
—other	$
Tuition and Fees reappropriated by the state (yes or no)	No*

Other Comments

* An increase in tuition may be required to be returned to the state general funds if that increase causes a school to exceed its established two-year budget ceiling.

APPENDIX A

Listing of Institutions by Classification, Control, and State

Description of the Institutional Classification System

Most earlier studies of higher education financing have used a three-category institutional classification system—university, 4-year, and 2-year institutions. Given the substantial differences among higher education institutions in terms of their relative emphasis on different levels and fields of study and the important implications of these differences for financial comparisons, this study uses a more detailed classification of institutions based on ten different categories of institutions, combined with a distinction between public and private/independent institutions.

The classification procedure used in this study was developed by NCHEMS, with one additional modification (to identify doctoral institutions that offer first professional health science programs (i.e., medicine, dentistry, osteopathic, and veterinary medicine). The NCHEMS procedure uses an explicit set of empirically based criteria that are applied objectively by computer analysis to consistently and uniquely identify each institution's category.

The criteria are based on:

- The number of degrees earned, by level of degree (associate, bachelors, masters, doctorate, and first professional) as an indication of the institution's *commitment* to an educational mission at each of these levels (e.g., doctoral study versus associate degree emphasis).
- The number of fields in which degrees were earned as an indication of the *diversity* of program offerings at an institution (e.g., offerings in a small number versus a range of disciplines).
- The proportion of degrees in each specific field as an indication of program *mix* or *specialization* at an institution (e.g., emphasis on a range of disciplines versus concentration in a single discipline).
- Research expenditures as an indication of the centrality of *research* activities to the mission of a campus.
- In addition, for the purposes of this study, an additional criteria was used to distinguish whether medical related activities were an integral part of the educational mission of the institution. For purposes of this study, the granting of professional doctoral degrees in the fields of medicine, dentistry, osteopathic medicine and/or veterinary medicine resulted in a campus being identified in a category "with medical" as contrasted to "without medical." This criteria was applied only to the universities (i.e., research universities and doctoral universities).

Data for this classification process were obtained from NCES using their HEGIS survey data on degrees and finances. Only those institutions included in the NCES-HEGIS universe were included. Many nonresponding single program occupational schools are not included in this universe.

In identifying "units" for classification, the study relied on the reporting units used by NCES in the HEGIS surveys. This caused some problems for branch campuses which were separately classified based on their own degree granting activities and *not* on the basis of those at the parent institution. Several institutions reported enrollment and financial data but did not report degrees conferred. These institutions were hand-classified into appropriate categories based upon input from their respective State agency and judgment as to where such institutions belonged in the classification scheme. In addition, 10 other institutions, reporting degrees conferred, were hand-classified because of the unique nature of the institution (for example, Rockefeller University in New York and the Rand Graduate Institute of Policy Studies in California).

The major categories in the NCHEMS institutional classification system and numbers of institutions by category and control in this study are:

	Public	Independent
• Research Universities		
—with medical	33	20
—without medical	18	6
• Universities		
—with medical	14	11
—without medical	45	26
• Comprehensive Institutions	244	147
• General Baccalaureate Institutions	115	622
• Two-Year Institutions		
—with academic/comprehensive program emphasis	677	158
—with occupational program emphasis	245	130
• Health Professional Institutions	31	22
• Other Professional/Specialized Institutions	42	517
Total	1464	1659

Definitions of the procedures used in classifying institutions by these categories follows:

Research Universities

These institutions are characterized by (1) a significant level of activity in and commitment to doctoral-level education as measured by the number of doctorate recipients, (2) a diversity in doctoral program offerings, and (3) a significant level of sponsored research at the campus (among the leading 77 research universities in the time period used for classification). Included in this category are institutions that are not considered specialized (see below) and that grant a minimum of 30 doctoral level degrees on an annual basis. These degrees must represent 3 or more doctoral-level program areas[1] or have an interdisciplinary program at the doctoral level. The first professional medical degrees (M.D., D.O., D.D.S., D.M.D., D.V.M., or equivalent) are included in the counts of doctoral degrees.

Universities

These institutions meet all of the criteria stated above except (3); that is, they conduct less than the criteria level of sponsored research.

Comprehensive Institutions

These institutions are characterized by a strong, diverse post-baccalaureate program (including first professional work), but do not engage in significant doctoral-level education. This category includes institutions not considered specialized schools that (1) grant less than 30 doctoral degrees and/or in fewer than 3 doctoral fields, (2) grant a minimum of 30 post-baccalaureate[2] degrees in 3 or more post-baccalaureate fields, or (3) have an interdisciplinary program at the post-baccalaureate level.

General Baccalaureate Institutions

These institutions are characterized by their primary emphasis on general undergraduate, baccalaureate education and are not engaged in significant amounts of post-baccalaureate education. This category includes institutions that (1) are not considered specialized institutions, (2) grant fewer than 30 post-baccalaureate degrees and/or in fewer than 3 post-baccalaureate fields, (3) grant baccalaureate degrees in 3 or more baccalaureate programs, (4) or offer a baccalaureate program in interdisciplinary studies, and (5) grant more than 75 percent of their degrees at the baccalaureate level or above.

Two-Year Institutions

These institutions are characterized by their emphasis on associate degree and/or certificate level study. They grant less than 25 percent of their degrees at the baccalaureate or post-baccalaureate level and confer over 75 percent of their awards for associate and/or certificate level study. Institutions with a 2-year upper division program would *not* fall in this category because they grant baccalaureate degrees.

a) Academic/Comprehensive Program: Institutions in which the number of degrees awarded in academic areas (5600 field in the HEGIS taxonomy) is 20 percent or more of all degrees awarded.

b) Occupational Program: Institutions which confer degrees or awards in two or more occupational programs and which grant less than 20 percent of their degrees in the academic area (5600 field in the HEGIS taxonomy).

Comprehensive Health Professional Institutions

Institutions where the number of professional health degrees (M.D., D.D.S., D.M.D., O.D., etc.) granted plus the number of other degrees granted in health science fields (HEGIS, 1200) exceeds 50 percent of all degrees awarded, but grant at least 20 percent of their total degrees in program areas other than professional medicine.

Other Professional and Specialized Institutions

This category includes a diverse group of specialized institutions. For purposes of the study they have been collapsed into a single category. The more detailed distinctions are:

a) *Other Health Institutions*—Institutions where the number of professional health degrees granted plus the number of other degrees granted in the health science area exceeds 50 percent of all degrees awarded, but either award no M.D. degrees or award over

80 percent of their total degrees in professional medicine (M.D. degree).

b) *Education Schools*—Institutions which confer over 50 percent of their degrees in education (HEGIS, 0800).

c) *Engineering Schools*—Institutions where the number of degrees awarded in the area of engineering (HEGIS, 0900) exceeds 50 percent of all degrees awarded.

d) Divinity Institutions--Institutions where the number of professional theological degrees plus the number of other degrees granted in theology (HEGIS, 2300) exceeds 50 percent of all degrees awarded.

e) *Business and Management Schools*—Institutions which confer over 50 percent of their degrees in the area of business and management science (HEGIS, 0500).

f) *Art, Music, and Design Schools*—Institutions which confer over 50 percent of their degrees in the area of art, music, and/or design (HEGIS, 1000).

g) *Law Schools*—Institutions where the number of professional law degrees (L.L.B. or J.D.) plus the number of other degrees awarded in law (HEGIS, 1400) exceeds 50 percent of all degrees awarded.

h) *U.S. Service Schools*—While these schools are separately categorized here, they were *excluded* from the study.

i) *Other Specialized or Professional Schools*—Institutions which grant degrees in fewer than three programs at the baccalaureate level, master's level, and the doctorate level and did *not* confer over 50 percent of their degrees in any of the above categories.

A listing of all campuses included in this study by institutional category and state follows. The states are shown in alphabetical order.

---

1 Programs or program areas are a major field of study as defined at the two-digit level of the HEGIS Taxonomy of Programs.

2 Includes masters, doctoral, and first professional degrees.
